From Wikipedia, the free encyclopedia

For the training group of Chinese track athletes, see Ma Junren.

The **Ma clique** or **Ma family warlords**[1] is a collective name for a group of Hui (Muslim Chinese) warlords in Northwestern China who ruled the Chinese provinces of Qinghai, Gansu and Ningxia for 10 years from 1919 until 1928. Following the collapse of the Qing dynasty in 1912, the region came under Chinese Muslim warlord Ma Qi's control until the Northern Expedition by the Republic of China consolidated central control in 1928. There were three families in the Ma clique ("Ma" being a common Hui rendering of the common Muslim name "Muhammad"), each of them respectively controlled, parts of Gansu, Ningxia and Qinghai. The three most prominent members of the clique were Ma Bufang, Ma Hongkui, and Ma Hongbin, collectively known as the **Xibei San Ma** (Chinese: 西北三馬, *Three Ma of the Northwest*). Some contemporary accounts, such as Edgar Snow's, described the clique as the "Four Ma" (rather than Three), adding Ma Bufang's brother Ma Buqing to the list of the top warlords.[2] Other prominent Ma's included Ma Anliang, Ma Qi, Ma Lin, Ma Hu-shan, and Ma Zhongying.

Governor of Gansu (1911–1918)	Ma Anliang
Governor of Qinghai (1915–1928) and Chairman of Qinghai (1928–1931)	Ma Qi
Governor of Ningxia (1921–1928; 1948–1949) and Governor of Gansu (1930–1931)	Ma Hongbin
Governor of Qinghai (1931–1938)	Ma Lin
Governor of Qinghai (1938–1949)	Ma Bufang
Governor of Ningxia (1931–1949)	Ma Hongkui

Ma Clique [edit]

The Ma Clique warlords were all generals in the military of the Republic of China, who controlled most of Mainland China until it was overtaken by the communist People's Liberation Army. The clique was begun by Muslim generals who served in the military of the Qing dynasty, most notably in the Kansu Braves army, who fought in the Boxer Rebellion against invading foreign forces. It was continued by two generations of their descendants.

After the Xinhai Revolution overthrew the Qing, the Ma Clique Generals declared their allegiance to the Republic of China. Unlike the Mongols, Hui Muslims refused to secede from the Republic, and Ma Qi quickly used his diplomatic and military powers to make the Tibetan and Mongol nobles recognize the Republic of China government as their overlord, and sent a message to President Yuan Shikai reaffirming that Qinghai was securely in the Republic. He replaced "Long, Long, Long, Live the reigning Emperor", with "Long live the Republic of China" on inscriptions.[3] Ma Anliang also agreed to join the new Republic of China government.[4]

When the Kuomintang seized power in the Northern Expedition, the Ma Clique warlords became members of the Kuomintang party, and their armies were renamed as divisions of the National Revolutionary Army. The Ma Clique Ninghai Army under General Ma Qi was renamed the National Revolutionary Army 26th Division.

ABSTRACT

Following the 1911 Xinhai Rebellion, the new leadership began to stress the fundamental unity of the peoples of the new Republic of China, even as newspaper commentaries foretold the need for separate Muslim representation as the only way to buy the participation of that constituency in the new state. Influential Chinese Muslim military leaders controlled much of the northwest; their participation in the new state was crucial to its survival. However, whilst the legacies of a nineteenth century process of minoritization meant it was often

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Rajeev Motwani (Hindi: राजीव मोटवानी , 24 March 1962 – 5 June 2009) was an Indian American professor of Computer Science at Stanford University whose research focused on theoretical computer science. He was a special advisor to Sequoia Capital. He was a winner of the Gödel Prize in 2001.[2][3][4]

Education [edit]

Rajeev Motwani was born in Jammu, Jammu and Kashmir, India on 24 March 1962, and grew up in New Delhi.[5] His father was in the Indian Army. He had two brothers. As a child, inspired by luminaries like Gauss, he wanted to become a mathematician. Motwani went to St Columba's School, New Delhi. He completed his B.Tech. in Computer Science from the Indian Institute of Technology Kanpur in Kanpur, Uttar Pradesh in 1983 and got his Ph.D. in Computer Science from the University of California, Berkeley in Berkeley, California, United States in 1988, under the supervision of Richard M. Karp.[1]

Career [edit]

Motwani joined Stanford soon after U.C. Berkeley. He founded the Mining Data at Stanford project (MIDAS), an umbrella organization for several groups looking into new and innovative data management concepts. His research included data privacy, web search, robotics, and computational drug design. He is also one of the originators of the Locality-sensitive hashing algorithm.

Motwani was one of the co-authors (with Larry Page and Sergey Brin, and Terry Winograd) of an influential early paper on the PageRank algorithm. He also co-authored another seminal search paper *What Can You Do With A Web In Your Pocket* with those same authors.[6] PageRank was the basis for search techniques of Google (founded by Page and Brin), and Motwani advised or taught many of Google's developers and researchers,[7] including the first employee, Craig Silverstein.[8]

He was an author of two widely used theoretical computer science textbooks: *Randomized Algorithms* with Prabhakar Raghavan[9] and *Introduction to Automata Theory, Languages, and Computation* with John Hopcroft and Jeffrey Ullman.[10]

He was an avid angel investor and helped fund a number of startups to emerge from Stanford. He sat on boards including Google, Kaboodle, Mimosa Systems (acquired by Iron Mountain Incorporated), Adchemy, Baynote, Vuclip, NeoPath Networks (acquired by Cisco Systems in 2007), Tapulous and Stanford Student Enterprises. He was active in the Business Association of Stanford Entrepreneurial Students (BASES).[11][12][13]

He was a winner of the Gödel Prize in 2001 for his work on the PCP theorem and its applications to hardness of approximation.[14][15]

The Early Google Papers: Rajeev Motwani's Contributions To Search

Michael Arrington

@arringtonTlang-en / 4:26 PM CDT • June 6, 2009

Comment

What can you do with a Web in your Pocket?

Sergey Brin[1] Rajeev Motwani[1] Lawrence Page[1] Terry Winograd[1]

Larry Page and Sergey Brin have always given Professor Rajeev Motwani significant credit for helping them create what would eventually become Google. Today, as I say my personal goodbye to the man who helped so many people in our community, I'm also spending some time going back and reading some of the early papers that Rajeev co-authored describing how PageRank could become the basis for a new kind of search engine.

In a 1998 paper called *"What Can You Do With A Web In Your Pocket"* Brin, Motwani, Page and Terry Winograd say *"...we have developed a global ranking of Web pages called PageRank based on the link structure of the Web that has properties that are useful for search and navigation..we have used PageRank to develop a novel search engine called Google, which also makes heavy use of anchor text."*

An even earlier paper in 1998 that the four co-authored called *"The PageRank Citation Ranking: Bringing Order to the Web"* went into much more detail on PageRank. *"In this paper, we take advantage of the link structure of the Web to produce a global "importance" ranking of every web page. This ranking, called PageRank, helps search*

Randomized Algorithms 1st Edition

by Rajeev Motwani (Author), Prabhakar Raghavan (Author)

4.5 ★★★★☆ 33 ratings

See all formats and editions

For many applications, a randomized algorithm is either the simplest or the fastest algorithm available, and sometimes both. This book introduces the basic concepts in the design and analysis of randomized algorithms. The first part of the text presents basic tools such as probability theory and probabilistic analysis that are frequently used in algorithmic applications. Algorithmic examples are also given to illustrate the use of each tool in a concrete setting. In the second part of the book, each chapter focuses on an important area to which randomized algorithms can be applied, providing a comprehensive and representative selection of the algorithms that might be used in each of these areas. Although written primarily as a text for

14 Excellence in Character

كتاب حسن الخلق

Abu Hurayra reported that the Prophet, may Allah bless him and grant him peace, said, "Do you know what it is that makes most people enter Hellfire?" "Allah and His Messenger know best," they said. He said, "The two empty ones:

the genitals and the mouth. Do you know what it is that makes most people enter Paradise? Taqwa of Allah and good character."

حَدَّثَنَا أَبُو نُعَيْمٍ، قَالَ: حَدَّثَنَا دَاوُدُ بْنُ يَزِيدَ قَالَ: سَمِعْتُ أَبِي يَقُولُ: سَمِعْتُ أَبَا هُرَيْرَةَ يَقُولُ: قَالَ النَّبِيُّ صلى الله عليه وسلم: تَدْرُونَ مَا أَكْثَرُ مَا يُدْخِلُ النَّارَ؟ قَالُوا: اللَّهُ وَرَسُولُهُ أَعْلَمُ، قَالَ: الأَجْوَفَانِ: الْفَرْجُ وَالْفَمُ، وَأَكْثَرُ مَا يُدْخِلُ الْجَنَّةَ؟ تَقْوَى اللهِ وَحُسْنُ الْخُلُقِ.

81 To make the Heart Tender (Ar-Riqaq) كتاب الرقاق

(4) Chapter: About hope and hoping too much (4) باب فِي الأَمَلِ وَطُولِهِ

حَدَّثَنَا صَدَقَةُ بْنُ الْفَضْلِ، أَخْبَرَنَا يَحْيَى، عَنْ سُفْيَانَ، قَالَ حَدَّثَنِي أَبِي، عَنْ مُنْذِرٍ، عَنْ رَبِيعِ بْنِ خُثَيْمٍ، عَنْ عَبْدِ اللَّهِ ـ رضى الله عنه ـ قَالَ خَطَّ النَّبِيُّ صلى الله عليه وسلم خَطًّا مُرَبَّعًا، وَخَطَّ خَطًّا فِي الْوَسَطِ خَارِجًا مِنْهُ، وَخَطَّ خُطَطًا صِغَارًا إِلَى هَذَا الَّذِي فِي الْوَسَطِ، مِنْ جَانِبِهِ الَّذِي فِي الْوَسَطِ وَقَالَ " هَذَا الإِنْسَانُ، وَهَذَا أَجَلُهُ مُحِيطٌ بِهِ ـ أَوْ قَدْ أَحَاطَ بِهِ ـ وَهَذَا الَّذِي هُوَ خَارِجٌ أَمَلُهُ، وَهَذِهِ الْخُطَطُ الصِّغَارُ الأَعْرَاضُ، فَإِنْ أَخْطَأَهُ هَذَا نَهَشَهُ هَذَا، وَإِنْ أَخْطَأَهُ هَذَا نَهَشَهُ هَذَا ".

Narrated `Abdullah:

The Prophet (ﷺ) drew a square and then drew a line in the middle of it and let it extend outside the square and then drew several small lines attached to that central line, and said, "This is the human being, and this, (the square) in his lease of life, encircles him from all sides (or has encircled him), and this (line), which is outside (the square), is his hope, and these small lines are the calamities and troubles (which may befall him), and if one misses him, another will snap (i.e. overtake) him, and if the other misses him, a third will snap (i.e. overtake) him."

Water-raising machines [edit]

Al-Jazari invented five machines for raising water,[1] as well as watermills and water wheels with cams on their axle used to operate automata,[34] in the 12th and 13th centuries, and described them in 1206. It was in these water-raising machines that he introduced his most important ideas and components.

al-Jazari's hydropowered saqiya chain pump device.

Saqiya chain pumps [edit]

The first known use of a crankshaft in a chain pump was in one of al-Jazari's saqiya machines. The concept of minimizing intermittent working is also first implied in one of al-Jazari's *saqiya* chain pumps, which was for the purpose of maximising the efficiency of the saqiya chain pump. Al-Jazari also constructed a water-raising saqiya chain pump which was run by hydropower rather than manual labour, though the Chinese were also using hydropower for chain pumps prior to him. Saqiya machines like the ones he described have been supplying water in Damascus since the 13th century up until modern times,[35] and were in everyday use throughout the medieval Islamic world.[36] Interestingly, the depiction of the chain in al-Jazari's pump appears to be in the form of a Möbius strip, from long before the Möbius strip was first identified as an object of study in mathematics.[37]

Double-action suction pump with valves and reciprocating piston motion [edit]

Citing the Byzantine siphon used for discharging Greek fire as an inspiration,[38] al-Jazari went on to describe his version of suction pipes, suction pump, double-action pump, and made early uses of valves and a crankshaft-connecting rod mechanism, when he developed a twin-cylinder reciprocating piston suction pump. This pump is driven by a water wheel, which drives, through a system of gears, an oscillating slot-rod to which the rods of two pistons are attached. The pistons work in horizontally opposed cylinders, each provided with valve-operated suction and delivery pipes. The delivery pipes are joined above the centre of the machine to form a single outlet into the irrigation system. This water-raising machine had a direct significance for the development of modern engineering. This pump is remarkable for three reasons:[9][39][40][41]

- The first known use of a true suction pipe (which sucks fluids into a partial vacuum) in a pump.
- The first application of the double-acting principle.
- The conversion of rotary to reciprocating motion via the crank-connecting rod mechanism.

Al-Jazari's suction piston pump could lift 13.6 metres of water,[*citation needed*] with the help of delivery pipes. It was not, however, any more efficient than the noria commonly used by the Muslim world at the time.[42]

Water supply system [edit]

al-Jazari developed the earliest water supply system to be driven by gears and hydropower, which was built in 13th century Damascus to supply water to its mosques and Bimaristan hospitals. The system had water from a lake turn a scoop-wheel and a system of gears which transported jars of water up to

WEAPONS AND WARFARE

Explosive Gunpowder and the First Cannon

Mafa, the Egyptian secret weapon used to defeat the Mongol army in the 13th century

Stephen Turnbull March 13, 2023

In the 13th century, there was a wave of Christian crusades determined to convert other religions and pagan worshippers into their fold. The campaign was spearheaded by the Mongol army which was led by the fierce Hülegüs. Their raid started with Syria in 1258 and swept through Damascus and Aleppo. Off the coastline made a stopover on the Mediterranean Sea. They had plans to take over Egypt's capital, Cairo, but decided to give the rulers an option to submit or be forced into submission. The Mongol envoy sent to Mamluk sultan, al-Muzaffar Saif ad-Din Qutuz, returned with a strong warning from the Egyptian ruler emphasizing they were not rendezvous.

Still angered by the proposal of the Mongolian army, the Mamluks, led by Qutuz, waged a military expedition against the Mongolian forces in Gaza. They fought a Mongol army of 20,000 at Ain Jalut, which is also known as Goliath's spring. The leverage the Mamluks exercised over the Mongol army was due to army General Baybars. Formerly with the Kipchak khan, his leverage years when he was once held there as a fugitive. His strategy enabled the Mamluks to subdue the Mongol forces on the battlefield, according to Britannica.

The plan was to capitalize on one of the tactics of the Mongols where they feign interest in engaging their enemies. While the Mongols followed the bait, his army had rehearsed tactics in wait to ambush the enemy forces. When their adversaries fell for the trick, the Mamluk army attacked them from all sides, leaving them with a heavy blow of assault from a wall of arrows. Through the Mongols fought hard and viciously, the Mamluks won the battle that day.

Ahmed Zewail

From Wikipedia, the free encyclopedia

Ahmed Hassan Zewail (February 26, 1946 – August 2, 2016) was an Egyptian and American chemist,[1] known as the "father of femtochemistry".[2] He was awarded the 1999 Nobel Prize in Chemistry for his work on femtochemistry and became the first Egyptian and Arab to win a Nobel Prize in a scientific field,[3] and the second African to win a Nobel Prize in Chemistry. He was the Linus Pauling Chair Professor of Chemistry, a professor of physics, and the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.

Early life and education [edit]

Ahmed Hassan Zewail was born on February 26, 1946, in Damanhur, Egypt, and was raised in Disouk.[4] He received Bachelor of Science and Master of Science degrees in chemistry from Alexandria University before moving to the United States to complete his PhD at the University of Pennsylvania under the supervision of Robin M. Hochstrasser.[5][6]

Career [edit]

After completing his PhD, Zewail did postdoctoral research at the University of California, Berkeley, supervised by Charles B. Harris.[7] Following this, he was awarded a faculty appointment at the California Institute of Technology in 1976, and eventually became the first Linus Pauling Chair in Chemical Physics there.[7] He became a naturalized citizen of the United States on March 5, 1982.[8] Zewail was the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.[9]

Zewail was nominated and participated in President Barack Obama's Presidential Council of Advisors on Science and Technology (PCAST), an advisory group of the nation's leading scientists and engineers to advise the President and Vice President and formulate policy in the areas of science, technology, and innovation.[10]

Research [edit]

Zewail's key work was a pioneer of femtochemistry[11][12][13]—i.e. the study of chemical reactions across femtoseconds. Using a rapid ultrafast laser technique (consisting of ultrashort laser flashes), the technique allows the description of reactions on very short time scales – short

Ahmed H. Zewail

American-Egyptian chemist

Ahmed H. Zewail (born February 26, 1946, Damanhur, Egypt—died August 2, 2016, Pasadena, California, USA) was an Egyptian-born American chemist who won the Nobel Prize for Chemistry in 1999 for developing a rapid laser technique that allowed scientists to study the action of atoms during chemical reactions. The breakthrough in the field of physical chemistry known as femtochemistry made Zewail the first Egyptian and the first African to win a Nobel Prize in a science category.

After receiving B.S. (1967) and M.S. (1968) degrees from Alexandria University, Zewail went to the University of Pennsylvania, where he received a doctorate in 1974. Two years later he joined the faculty of the California Institute of Technology (Caltech) as an associate professor and was selected as the school's Linus Pauling Professor of Chemical Physics. Zewail served as a visiting professor at a number of institutions, including Texas A&M University, the University of Texas, and American University in Beirut (2012). How Ramjets Work

By: Nicholas Gerbis | Updated: Apr 15, 2024

NASA engineer Laura O'Connor inspects a supersonic ramjet (scramjet) engine model at Langley Research Center in Hampton, Virginia.
© CORBIS

Key Takeaways

- A ramjet is a type of air-breathing jet engine that operates on the principle of compressing incoming air without the need for rotating parts.
- It relies on the high-speed forward motion of the aircraft to compress air, making it suitable for supersonic and hypersonic flight.

Guinness Recognizes NASA's X-43A Scramjet Speed Record

NASA

JUN 05, 2013

RELEASE

It's official. The new world speed record for a jet-powered aircraft, set by NASA in November, has been officially recognized by Guinness World Records.
The accomplishment, the third and final flight in the experimental X-43A project, demonstrated that an advanced form of air-breathing (jet) engine could power an aircraft at nearly 10 times the speed of sound. Data from the unpiloted, 12-foot-long research vehicle show that its revolutionary "scamjet" engine worked successfully at Mach 9.6 or nearly 7,000 mph, as it flew at about 109,000 feet over the Pacific Ocean west of California.
The flight was the culmination of NASA's Hyper-X Program, a

Bringing emotional intelligence to technology with Rana el Kaliouby

Can machines finally understand what humans are feeling? Artificial intelligence pioneer Rana el Kaliouby discusses the science behind Emotion AI

THE RECENT SUCCESS IN the accurate analysis of facial expressions and measurement in emotion and engagement has paved a new direction of how we use artificial intelligence to improve the way we live and interact with each other. This shift from identification technology, such as facial recognition, to human perception AI – technology that can understand human sentiment – is the driving force behind Rana el Kaliouby's work.

Inspired by her own experience with years of long-distance communication virtually and digitally, el Kaliouby and her team at Affectiva are developing technology that can comprehend human engagement. This shift comes at an important time – political polarisation suggests that empathy is diminishing and the current COVID-19 pandemic has heightened the need for emotional context, as hundreds of millions of people find themselves physically isolated from others.

New Salesforce Research

"Technology has a lot of cognitive intelligence, but no emotional intelligence – which is a problem for not only how we interface with technologies but, more importantly how we connect and communicate with one another."

In this punchy virtual briefing hosted by Greg Williams, Editor of WIRED with Rana el Kaliouby, co-founder and

Research: Arab Inventors Make the U.S. More Innovative

by Sami Mahroum, Georg Zahradnik, and Bernhard Dachs

February 23, 2017

From Hassan Kamel Al-Sabbah, a Lebanese-born American serial inventor, to Ahmed Zewail, the 1999 Nobel laureate in chemistry, to Farouk El-Baz, a NASA and MIT scientist who helped plan the Apollo landing, to Elias A. Zerhouni, the 15th director of the National Institutes of Health, Arab immigrants have made major contributions to American science and technology.

As the Trump administration attempts to limit immigration from several Arab states, these contributions deserve extra attention. The problem is that to date there has been little work to document the extent of Arab contributions to American innovation. We recently set out to remedy that, and our analysis suggests that Arab inventors play a major role in U.S. innovation. They also contribute significantly to the success of major U.S. tech companies.

To shed more light on Arab contributions to the U.S. innovation system, we ran an exercise matching Arabic first names with international patent applications filed under the Patent Cooperation Treaty (PCT). This data includes patents by people residing in the U.S. and around the world. Our approach has been used before, in a study of ethnic innovation in the U.S. as well as in a study of female inventors.

There are obvious shortcomings to this approach. For instance, many non-Arab Muslims have Arabic first names, such as Mohammad, Ali, or Omar, while some Arabs have non-Arabic names. We tried to mitigate

circuitry to make early designs for electric cars. Again, his early designs have become extremely prescient for the modern age, where electric cars are being turned to as a replacement for fueling cars with petrol. Al-Sabbah experimented on his own car to try and crack practically powering a car with solar energy which is an incredibly early attempt at something which is today the focus of huge companies like Tesla.

Arc-Welding

In heavy industries such as the development of wind farms, ships, tanks, turbos, and other heavy-duty building, arc-welding is crucial. Al-Sabbah developed a rectifying system which was absolutely vital to the development of the arc welding machine. This is a really important development where-by welding for huge pieces of metal that are required for heavy industries is facilitated by, what turns out to be something of an obsession of Al-Sabbah, the use of electricity to heat up the metal to the required temperature to weld it effectively to the other parts of the heavy items. This proved to be really important during the Second World War, where industrial developers used Al-Sabbah's techniques to develop the requisite welding techniques for the extreme mass development of vehicles and turbos that powered the respective war efforts.

Television

To make a departure from the heavy, industry-oriented worlds of space travel and heavy instrument arc-welding, Al-Sabbah's developments and patents, 5 of them to be specific, made a huge impact on the world of televisions and screens in general. In fact, so impactful were his patents that when the, now ubiquitous, LCD (liquid crystal display) screens were introduced they were created directly out of patents that belonged to Al-Sabbah. His impact on televisual transmission directly led to the creation of military LCDs which are in aircraft, designed to display information in super high detail. It all comes back to his developments on the cathode ray tube, a field in which two of the patents sat specifically. His screens have huge numbers of pixels which allowed for a far greater color detail than the normal black and green filters. It is proposed that without Al-Sabbah, modern television wouldn't exist.

Statue of Hassan Kamel Al Sabbah in Nabatieh district, Lebanon

6 Groundbreaking Innovations by Arab Americans

Americans born in or with ancestral ties to Arab-speaking countries have made countless significant scientific, medical and engineering contributions.

BY: ELIZABETH YUKO
UPDATED: MARCH 26, 2024 | ORIGINAL: MARCH 31, 2022

copy page link | PRINT PAGE

While Americans born in or with ancestral ties to Arab countries have made countless significant scientific, medical and engineering contributions, most have never made it into record books. From cryptography, to the artificial heart, to the iPod, here are a few examples of some of the major advancements by Arab Americans.

1. Television Transmission and LCD Screens

Born in Nabatieh, Lebanon in 1895, Hassan Kamel Al-Sabbah studied and then taught mathematics at the American University of Beirut before immigrating to the United States in 1921. After a brief stint studying at the Massachusetts Institute of Technology (MIT), Al-Sabbah earned a master's degree in engineering sciences from the University of Illinois, says Lujine Nasralla, communications specialist at the Arab American National Museum in Dearborn, Michigan.

"In 1923, General Electric (GE) hired him to work in its Engineering Laboratory under a contract that awarded him a dollar for each of his patents," Nasralla explains, noting that between 1927 and 1935, he applied for patents for 52 of his inventions while working at GE. Some of the patents Al-Sabbah was awarded during his time at GE include three for innovations in television transmission technology (granted between 1928 and 1930), and two for cathode ray tubes (1935).

Though Al-Sabbah died in a car accident 1935, GE engineers continued to rely on the technology he invented, including developing the liquid crystal display (LCD) based on one of his patents. Al-Sabbah made numerous other significant contributions to science, technology and engineering, especially in the field of solar energy.

Detainee Aliases	'Faysal Alawi, Issa, Mikhlafi, Zakariya
Nationality	Yemeni
Date of Birth	15 December 1975
Arrival at Guantanamo	May 2003

~~(U//FOUO)~~ Omar Muhammad Ali al-Rammah (YM-1017) was probably a low-level mujahidin fighter in Bosnia during the mid-1990s before becoming a facilitator for al-Qa'ida–affiliated extremists in the late 1990s. He may have trained at al-Qa'ida–associated camps in Afghanistan before relocating to Georgia in mid-2001 to support the Chechen jihad. Rammah was arrested in April 2002 in an operation in which he was to provide detonators for a remote-controlled explosive device.

trusted but low-level mujahidin facilitator while he aspired to enter Chechnya to fight. He arranged to acquire fraudulent passports; and sought to acquire weapons, ammunition, and other supplies for mujahidin operations in Chechnya." It was also claimed that he "probably received some training under Abu Atiya, who led a toxin network while in Georgia, but probably had no other inyolvement in its operations." Captured in April 2002 by Russian forces, he arrived at Guantánamo in May 2003 after being held in a variety of CIA "black sites" and US-run secret prisons in Afghanistan.

Moving on to his behavior in Guantánamo, the summary noted that, although he has been "moderately compliant," he "has refused to cooperate with US personnel and probably retains an extremist mindset" — again, the use of the word "probably" does not inspire confidence that this is necessarily an accurate assessment. The summary added that al-Rammah "has made no effort to reconnect with family," although this claim is contradicted by his civilian lawyer, Beth Jacob, who, in her submission to the board, posted below, explicitly states that "despite several efforts by the International Red Cross (which my firm has confirmed independently through conversations with the ICRC) and others — he has not been able to make contact with his family since his arrival at Guantánamo."

The summary also noted that al-Rammah

ALJAZEERA

Bosnian Serb general to surrender

Former Bosnian Serb general Vinko Pandurevic, who is wanted by the UN war crimes tribunal in The Hague for alleged genocide during Bosnia's 1992-95 war, will surrender to the court, the Serbian government said.

Slobodan Milosevic's exit turned the tide against Serb generals

20 Mar 2005

Pandurevic announced his decision after talks earlier on Sunday in the Serbian capital with Serbian Justice Minister Zoran Stojkovic, a government statement said.

"After the talks with minister Stojkovic, General Vinko Pandurevic decided to volontarily surrender to The Hague to help his people," the statement added.

Pandurevic, who is wanted over his role in the 1995 massacre of some 8000 Muslims by Serb forces in the eastern Bosnian town of Srebrenica, will travel to The Hague on Wednesday accompanied by a Serbian government minister, according to the statement.

The general will also be accompanied by Bosnian Serb Interior Minister Darko Matijasevic, the Bosnian Serb government said.

OREGON JEWISH MUSEUM AND CENTER FOR HOLOCAUST EDUCATION

HENK PANDER, NOVEMBER 21, 1937 – APRIL 6, 2023

Henk Pander lived a long life as a pure artist, undiminished in the moral voracity and aesthetic ferocity with which he confronted the universe. His paintings are brave, plaintive and vivid, deeply personal and yet, for precisely that reason, challengingly universal. Henk embodied the best of representational realism—appropriate for an artist trained in the classical Dutch traditions of Rembrandt and Vermeer. But he was also, as an immigrant, American, and product of Portland's 1960s counterculture, a universalist driven by moral outrage. His art exemplified the power of visual art to express both historical significance and intimate emotion, a history painter who magnified and heightened historical reality through the prism of his delicate imaginative vision. Henk Pander was justifiably proud to be an heir to Rembrandt.

The indictment against Vinko Pandurevic is unsealed.

Press Release

CHAMBERS

(Exclusively for the use of the media. Not an official document)

The Hague, 14 December 2001
CC/P.I.S./651e

The indictment against Vinko Pandurevic is unsealed.

On Friday 7 December 2001, the disclosure of the indictment against Vinko Pandurevic was ordered. The indictment was confirmed on 2 November 1998 and amended on 27 October 1999.

THE ACCUSED

Born in 1959 in Sokolac (Bosnia and Herzegovina), Vinko Pandurevic was an Infantry Captain in the Yugoslav People's Army (JNA) prior to being appointed Brigade Commander within the Bosnian Serb Army (VRS). According to the indictment, he was Commander of the "Zvornik Brigade" from 12 December 1992 through to November 1996, which was involved in the July 1995 attack on the Srebrenica "safe area" and the subsequent killing and execution of Bosnian Muslim men and boys. Vinko Pandurevic was promoted to the rank of General-Major in June 1997, and was a member of the VRS General Staff until he was relieved in April 1998.

FACTUAL ALLEGATIONS

The indictment alleges that between about 11 July 1995 and 1 November 1995, Vinko Pandurevic, "*intending to destroy a part of the Bosnian Muslim people as a national, ethnical or religious group*", killed and caused serious bodily or mental harm to members of the group. He allegedly "*planned, instigated, ordered or otherwise aided and abetted in the planning, preparation or execution*" of the "*opportunistic killings*" and "*organised mass executions*" of thousands of captured Bosnian Muslim men and boys from the Srebrenica "safe area".

ALJAZEERA

Bosnian Serb general to surrender

Former Bosnian Serb general Vinko Pandurevic, who is wanted by the UN war crimes tribunal in The Hague for alleged genocide during Bosnia's 1992-95 war, will surrender to the court, the Serbian government said.

Slobodan Milosevic's exit turned the tide against Serb generals

20 Mar 2005

Pandurevic announced his decision after talks earlier on Sunday in the Serbian capital with Serbian Justice Minister Zoran Stojkovic, a government statement said.

"After the talks with minister Stojkovic, General Vinko Pandurevic decided to volontarily surrender to The Hague to help his people," the statement added.

Pandurevic, who is wanted over his role in the 1995 massacre of some 8000 Muslims by Serb forces in the eastern Bosnian town of Srebrenica, will travel to The Hague on Wednesday accompanied by a Serbian government minister, according to the statement.

The general will also be accompanied by Bosnian Serb Interior Minister Darko Matijasevic, the Bosnian Serb government said.

OREGON JEWISH MUSEUM AND CENTER FOR HOLOCAUST EDUCATION

HENK PANDER, NOVEMBER 21, 1937 – APRIL 6, 2023

Henk Pander lived a long life as a pure artist, undiminished in the moral voracity and aesthetic ferocity with which he confronted the universe. His paintings are brave, plaintive and vivid, deeply personal and yet, for precisely that reason, challengingly universal. Henk embodied the best of representational realism—appropriate for an artist trained in the classical Dutch traditions of Rembrandt and Vermeer. But he was also, as an immigrant, American, and product of Portland's 1960s counterculture, a universalist driven by moral outrage. His art exemplified the power of visual art to express both historical significance and intimate emotion, a history painter who magnified and heightened historical reality through the prism of his delicate imaginative vision: Henk Pander was justifiably proud to be an heir to Rembrandt.

Case Summary
On 05/05/2018 CAVALRY SPV I LLC filed an Other lawsuit against CALLANDER, CHRISTOPHER. This case was filed in Sumter County Florida Courts, Sumter County Courthouse located in Sumter, Florida. The Judges overseeing this case are PAUL MILITELLO and MILITELLO, PAUL LOUIE. The case status is Disposed - Other Disposed.

Tampa Bay Times

A West Tampa cigar factory is for sale

The Samuel I. Davis Cigar Factory was built in 1910.

TAMPA — Construction crews estimated that the Samuel I. Davis Cigar Factory's brick work was an hour from completion when a fire gutted the tower sitting atop the 50,000-square-foot structure in 1910.

But the damage was repaired, and the three-story factory at 900 N. Howard Ave. was finished later that year.

Los Angeles Times

According to one story, the first circus was staged by Ptolemy II Philadelphus, king of Egypt from 285 to 246 BC, who gathered animals, birds and reptiles from Africa and the Middle East and put them on parade for his people on days of celebration.

Next year, to celebrate the national circus' 20th anniversary, the Ministry of Culture is planning an international festival and will ask 35 countries to compete in a circus competition.

Why will there be no other Arabic circuses there?

In the conservative Islamic countries, the idea of a woman performing in a leotard and barelegged would be abhorrent, as would sexually integrated audiences. Security-conscious governments might also be wary of approving events that attract crowds, as a circus does. And in many other countries of this region, there is simply no tradition of humor as an art form--and little culture other than that of the desert heritage.

"The Egyptians are the only Arabs who would understand the value of laughter and having fun," said one observer.

WIKIPEDIA

Circassians

From Wikipedia, the free encyclopedia

For other uses, see Circassian (disambiguation).

Circassians, also called **Cherkess** or **Adyghe** (Adyghe and Kabardian: Адыгэ, romanized: Adygeiri) are an indigenous Northwest Caucasian ethnic group and a nation, native to the historical country-region of Circassia in the North Caucasus.[79] As a consequence of the Circassian genocide perpetrated by the Russian Empire in the 19th century during the Russo-Circassian War, most Circassians were exiled from their homeland in Circassia to modern-day Turkey and the rest of the Middle East, where most of them are today.[80] In the early 1990s, the Unrepresented Nations and Peoples Organization estimated that there are as many as 3.7 million Circassians in diaspora in over 50 countries.[81]

The Circassian language is the ancestral language of the Circassian people,[82] and Islam has been the dominant religion among them since the 17th century.[83] Circassia has been repeatedly invaded since ancient times; its isolated terrain coupled with the strategic value external societies have placed on the region have greatly shaped the Circassian national identity.[84]

The Circassian flag consists of a green field charged with 12 gold stars and, in the center, three crossed arrows. The stars represent the 12 historical Circassian provinces: the Abzakh, the Besleney, the Bzhedugh, the Hatuqway, the Kabardians, the Mamkhegh, the Natuhaj, the Shapsugh, the Cherniigriy, the

History of juggling

From Wikipedia, the free encyclopedia

The art of juggling has existed in various cultures throughout history. The beginning is uncertain. The first depictions were found in ancient Egypt, China, Greece, and Rome, as well as medieval and modern societies.

Ancient Egypt

The earliest record of tossing juggling is a painting on the wall of Tomb 15 in Egypt's Beni Hasan cemetery complex. This tomb belonged to Baqet III, a provincial governor of Menat-Khufu (present day Minya) during the later years of the Eleventh Dynasty of Egypt.[17] It depicts female dancers and acrobats juggling up to three balls, and one of the girls juggling with her arms crossed.

This Egyptian wall painting from the wall of Tomb 15 at Beni Hasan appears to depict toss jugglers.

In another Beni Hasan painting, four girls are playing a juggling game in which two girls throw and catch a ball while being carried on the backs of the others. Arthur Watson, in his 1907 article for *The Reliquary and Illustrated Archaeologist*, suggests that if a player dropped the ball in this game, it became that player's turn to become the bearer.[18]

Brooklyn Museum associate curator Dr. Robert Bianchi suggests that the appearance of jugglers in the Beni Hassan tomb may be "an analogy between balls and circular mirrors, as round things were used to represent solar objects, birth and death."[19]

FESTIVAL PROGRAMS EQUIGGLE RESOURCES ABOUT MEMBERSHIP SUPPORT US

ANCIENT JUGGLING TOMBS – PART 1

September 10, 2020

(Haz clic aquí para español.)

One of the oldest representations of juggling dates from 1994 – 1781 BC, in the tombs at Beni Hasan. Due to the time that has passed and the little documentation that there is in this regard, researching before Christ juggling is a never-ending job. These investigations require deepening in disciplines such as archaeology, history, anthropology. It is not easy to unveil a new discovery about the ancient history of juggling. However, prominent juggling historians and researchers such as David Cain, Eric Aberg, Thom Wall, and others have provided us with invaluable data. All my admiration for them.

For my part, I did my homework to research some BC juggling tombs, and I was able to find some interesting things that I will share with you below.

In many articles on juggling history, the images on the tombs of Beni Hasan are discussed, saying that it was an Egyptian prince who marked his tomb with depictions of juggling. Beni Hasan is not actually a prince; it is the name of a town in Middle Egypt on the eastern bank of the Nile River where a necropolis is found, and there lie the remains of governors, monarchs and pharaohs.

Better designs for the future of hypersonic flight
In the 1960s, an improved ramjet was devised in which the burner could function supersonically. The modified ramjet, or scramjet, minimizes the losses due to the shock wave flow loss allowing the engine to produce enough thrust for hypersonic travel or speeds up to Mach 15.
Since the scramjet uses external air to power the combustor, it is much more efficient than a rocket, which must carry all of its oxygen on board. Scramjets are optimized for hypersonic flight and will not function at speeds below Mach 3, requiring a rocket to accelerate it up to critical engine stall speeds.
SEE ALSO: NEW AIRCRAFT TRAVELS MACH 7.5 WITH SCRAMJET ENGINE
The first successful test flight of a scramjet took place on July 30, 2002, by the University of Queensland's HyShot team and their international partners.
In 2004, NASA demonstrated it X-43A scramjet-powered aircraft, achieving speeds almost at Mach 7. Recent advancements in scramjet technology have seen the HIFiRE 5b jet travel at Mach 7.5. Although

For Immediate Release

U.S. Attorney's Office, Eastern District of Missouri

ST. LOUIS – A man from St. Louis on Wednesday admitted possessing and sharing child pornography and fleeing from St. Louis while on house arrest.

Daniel Bert, 38, pleaded guilty to a felony charge of transportation of child pornography. He admitted that after receiving two tips about Bert, the FBI discovered he was discussing his sexual interest in young children on Kik Messenger. An undercover FBI special agent began communicating with Bert on another app, Wickr, and Bert sent a picture of his genitals to the agent. He also expressed his sexual interest in young children, his plea agreement says. In text messages, Bert told the agent that he had a hard drive full of child pornography. On the same day that agents obtained a search warrant for Bert's home, Bert asked the undercover agent to join him in an online video chat during which Bert played videos containing child pornography.

Televangelist defends lavish lifestyle and use of private jets, calls it a "biblical thing"

Kenneth Copeland, a Texas-based televangelist, was confronted by a reporter who grilled him over his fleet of private planes. The exchange, which aired last month on Inside Edition, went viral and showed Copeland justifying his luxurious spending.

Inside Edition correspondent Lisa Guerrero asked Copeland about why he wasn't fly commercial as he was getting in a vehicle in Branson, Missouri.

He defended it, making it seem to be a vital means to his televangelism.

He said, "If I flew commercial, I'd have to stop 65% of what I'm doing."

Guerrero questioned him about a private jet he purchased from filmmaker Tyler Perry, the Gulfstream V.

He replied, "Well, that's none of your business."

TULSA, Okla. (AP) — The Department of Justice announced a settlement Wednesday with Oral Roberts University, saying the evangelical school will pay more than $300,000 to resolve whistleblower allegations that it broke federal law in the way it compensated a recruiting company.

Federal prosecutors said the university in Tulsa paid recruiter Joined Inc. with a share of tuition from students who enrolled, in violation of incentive compensation law on admissions and recruitment.

The university admits no wrongdoing in paying the settlement and denies the allegations.

Inc. co-owner Maurice Shoe will receive $45,000 through a provision of the law that allows

Sahih al-Bukhari • Military Expeditions led by the Prophet (pbuh) (Al-Maghaazi) - كتاب المغازي

Narrated Abu `Uthman:

I heard from Sa`d, the first man who has thrown an arrow in Allah's Cause, and from Abu Bakra who **jumped** over the wall of the Ta`if Fort along with a few persons and came to the Prophet. They both said, "We heard the Prophet saying, " If somebody claims to be the son of somebody other than his father knowingly, he will be denied Paradise (i.e. he will not enter Paradise).' " Narrated Ma`mar from `Asim from Abu Al-`Aliya or Abu `Uthman An-Nahdi who said. "I heard Sa`d and Abu Bakra narrating from the Prophet." `Asim said, "I said (to him), 'Very trustworthy persons have narrated to you.' He said, 'Yes, one of them was the first to throw an arrow in Allah's Cause and the other came to the Prophet in a group of thirty-three persons from Ta`if.'

Hundreds of New Testaments torched in Israel

STORY HIGHLIGHTS

- Israeli police to probe recent burning of New Testaments in Or-Yehuda
- Deputy mayor admits collecting "Messianic propaganda," but did not support burning
- Anti-Defamation League, other groups criticize burning

(CNN) -- Police in Israel are investigating the burning of hundreds of New Testaments in a city near Tel Aviv, an incident that has alarmed advocates of religious freedom.

Investigators plan to review photographs and footage showing "a fairly large" number of New Testaments being torched this month in the city of Or-Yehuda, a police spokesman, Micky Rosenfeld, said Wednesday.

News accounts in Israel have quoted Uzi Aharon, the deputy mayor of Or-Yehuda, as saying he organized students who burned several hundred copies of the New Testament. The deputy mayor gave interviews to Israeli radio and television stations after word of the incident surfaced about two weeks ago.

Soon he was talking with Russian, Italian and French television stations, "explaining to their highly offended audiences back home how he had not meant for the Bibles to be burned, and trying to undo the damage caused by the news (and photographs) of Jews burning New Testaments," The Jerusalem Post reported.

Aharon told CNN on Wednesday that he collected New Testaments and other "Messianic propaganda" that had been handed out in the city but that he did not plan or organize a burning. Instead, he said, three teenagers set fire to a pile of New Testaments while he was not present. Once he learned what was going on, he said, he stopped the burning.

The episode has worried defenders of Israel's minority population of Messianic Jews, who consider themselves Jewish but believe in the divinity of Jesus, as do Christians. It also has concerned evangelical Christians in North America, Europe and Asia, who visit Israel by the hundreds of thousands.

Calev Myers, an attorney for Messianic Jews in Israel, told CNN he plans to file a formal complaint Thursday with the national police at the request of the United Christian Council in Israel, an umbrella organization for a few dozen Christian organizations outside Israel.

"I hope the people who are responsible for breaking the law will be indicted and prosecuted," he said.

About 200 New Testaments were burned, Aharon said, but he saved another 200.

His goal was to stop attempts to distribute Christian literature in the city, he said.

Myers, however, said he doubts that Messianic Jewish missionaries distributed the New Testaments. He said it's not clear how the volumes found their way into homes in Or-Yehuda.

The deputy mayor told CNN he respects the New Testament and would not do what has been done to the Jews in the past -- a reference to Nazi burning of Jewish and other books in the 1930s, and other occasions when Jewish texts, including sacred ones, were burned.

Myers said his complaint will ask the authorities to investigate possible violations of two Israeli laws. One forbids the destruction or desecration of any religious icon or item that a group holds sacred. Another bans

Based on the popular blog, Porn4Jews, *Kosher Porn* marries traditional Jewish values with hilarious modern-day memes.

Shalom! If you came here in search of pornography, we suggest that you quietly step away and continue your search elsewhere. But, if Hebrew-speaking, challah-eating mensches turn you on, then Mazel Tov! Your prayers have been answered. This kind of "porn" is nudity-free, 100 percent kosher-certified, and, if we did our job right -- pretty damn funny. In other words, this porn is marriage material. This collection of photos paired with hilarious captions is the perfect gift book for Jews this Hanukkah season or any time of year. L'chaim!

Man sentenced to 47 years to life for kidnapping 9-year-old girl from upstate New York park

Share

BALLSTON SPA, N.Y. (AP) — A man was sentenced Wednesday to 47 years to life in prison for kidnapping and sexually assaulting a 9-year-old girl who went missing from a state park in upstate New York last year.

Craig N. Ross Jr. pleaded guilty in February to taking the girl in September from a campground at Moreau Lake State Park, a rural area about 35 miles (50 kilometers) north of Albany. The disappearance sparked a 48-hour search that ended when she was found alive at a camper Ross was staying in.

Abu Ghraib military contractor warned bosses of abuses 2 weeks after arriving, testimony reveals

Share

ALEXANDRIA, Va. (AP) — A civilian contractor sent to work as an interrogator at Iraq's infamous Abu Ghraib prison resigned within two weeks of his arrival and told his corporate bosses that mistreatment of detainees was likely to continue.

Jurors saw the October 2003 email from Rich Arant, who worked for military contractor CACI, during testimony Wednesday in a lawsuit filed by three Abu Ghraib survivors. The former prisoners are suing CACI, alleging that the Reston-Virginia based company shares responsibility for the mistreatment they endured.

CACI had a contract to supply interrogators to the Army after the 2003 invasion of Iraq, and scrambled to supply the needed personnel. The first CACI interrogators arrived at Abu Ghraib on Sept. 28 of that year.

Arant sent his resignation letter to CACI on Oct. 14. He informed his bosses about

Page, Brin, and **Scott Hassan**—the rarely acknowledged "third founder" of Google—were building a machine that converts the time we spend exploring the Internet into money as a means to an end. Money was just the first step in the grand plan. Hassan, who bailed out of Google early, is still trying to cure death and colonize the solar system. Page and Brin stayed on, and changed as Google did—monetized, and thoroughly civilized. "It's really depressing," said one early employee.

From Wikipedia, the free encyclopedia

Scott Hassan is a computer programmer and entrepreneur who was the main programmer of the original Google Search engine, then known as BackRub. He was research assistant at Stanford University at the time. Hassan left before Google was officially founded as a company.

In 1997 Hassan founded FindMail, later renamed to eGroups.com, an email list management web site. He owned 5.7% of eGroups in March 2000 when the company filed a Form S-1. eGroups was later bought by Yahoo! for $432m in August 2000 in a stock deal and became Yahoo! Groups.

In 2006 Hassan started Willow Garage, a robotics research lab and technology incubator. The organization created the open source robotics software suite ROS (Robot Operating System). Willow Garage shut down in early 2014.

Water-raising machines [edit]

Al-Jazari invented five machines for raising water,[1] as well as watermills and water wheels with cams on their axle used to operate automata,[34] in the 12th and 13th centuries, and described them in 1206. It was in these water-raising machines that he introduced his most important ideas and components.

al-Jazari's hydropowered saqiya chain pump device.

Saqiya chain pumps [edit]

The first known use of a crankshaft in a chain pump was in one of al-Jazari's saqiya machines. The concept of minimizing intermittent working is also first implied in one of al-Jazari's saqiya chain pumps, which was for the purpose of maximising the efficiency of the saqiya chain pump. Al-Jazari also constructed a water-raising saqiya chain pump which was run by hydropower rather than manual labour, though the Chinese were also using hydropower for chain pumps prior to him. Saqiya machines like the ones he described have been supplying water in Damascus since the 13th century up until modern times,[35] and were in everyday use throughout the medieval Islamic world.[36] Interestingly, the depiction of the chain in al-Jazari's pump appears to be in the form of a Möbius strip, from long before the Möbius strip was first identified as an object of study in mathematics.[37]

Double-action suction pump with valves and reciprocating piston motion [edit]

Citing the Byzantine siphon used for discharging Greek fire as an inspiration,[38] al-Jazari went on to describe his version of suction pipes, suction pump, double-action pump, and made early uses of valves and a crankshaft-connecting rod mechanism, when he developed a twin-cylinder reciprocating piston suction pump. This pump is driven by a water wheel, which drives, through a system of gears, an oscillating slot-rod to which the rods of two pistons are attached. The pistons work in horizontally opposed cylinders, each provided with valve-operated suction and delivery pipes. The delivery pipes are joined above the centre of the machine to form a single outlet into the irrigation system. This water-raising machine had a direct significance for the development of modern engineering. This pump is remarkable for three reasons:[39][40][41]

- The first known use of a true suction pipe (which sucks fluids into a partial vacuum) in a pump.
- The first application of the double-acting principle.
- The conversion of rotary to reciprocating motion via the crank-connecting rod mechanism.

Al-Jazari's suction piston pump could lift 13.6 metres of water,[citation needed] with the help of delivery pipes. It was not, however, any more efficient than the noria commonly used by the Muslim world at the time.[42]

Water supply system [edit]

al-Jazari developed the earliest water supply system to be driven by gears and hydropower, which was built in 13th century Damascus to supply water to its mosques and Bimaristan hospitals. The system had water from a lake turn a scoop-wheel and a system of gears which transported jars of water up to

itself. This great Muslim physicist also discovered the camera obscura phenomenon, which explains how the eye sees images upright due to the connection between the optic nerve and the brain.

7. Music

Muslim musicians have had a profound impact on Europe, dating back to Charlemagne tried to compete with the music of Baghdad and Cordoba, according to Hassani. Among many instruments that arrived in Europe through the Middle East are the lute and the rahab, an ancestor of the violin. Modern musical scales are also said to derive from the Arabic alphabet.

8. Toothbrush

According to Hassani, the Prophet Mohammed popularized the use of the first toothbrush in around 600. Using a twig from the Meswak tree, he cleaned his teeth and freshened his breath. Substances similar to Meswak are used in modern toothpaste.

9. The crank

Many of the basics of modern automatics were first put to use in the Muslim world, including the revolutionary crank-connecting rod system. By converting rotary motion to linear motion, the crank enables the lifting of heavy objects with relative ease. This technology, discovered by Al-Jazari in the 12th century, exploded across the globe, leading to everything from the bicycle to the internal combustion engine.

10. Hospitals

"Hospitals as we know them today, with wards and teaching centers, come from 9th century Egypt," explained Hassani. The first such medical center was the Ahmad ibn Tulun Hospital, founded in 872 in Cairo. Tulun hospital provided free care for anyone who needed it – a policy based on the Muslim tradition of caring for all who are sick. From Cairo, such hospitals spread around the Muslim world.

3. Flying machine

"Abbas ibn Firnas was the first person to make a real attempt to construct a flying machine and fly," said Hassani. In the 9th century he designed a winged apparatus, roughly resembling a bird costume. In his most famous trial near Cordoba in Spain, Firnas flew upward for a few moments, before falling to the ground and partially breaking his back. His designs would undoubtedly have been an inspiration for famed Italian artist and inventor Leonardo da Vinci's hundreds of years later, said Hassani.

4. University

In 859 a young princess named Fatima al-Firhi founded the first degree-granting university in Fez, Morocco. Her sister Miriam founded an adjacent mosque and together the complex became the al-Qarawiyyin Mosque and University. Still operating almost 1,200 years later, Hassani says he hopes the center will remind people that learning is at the core of the Islamic tradition and that the story of the al-Firhi sisters will inspire young Muslim women around the world today.

5. Algebra

The word algebra comes from the title of a Persian mathematician's famous 9th century treatise "Kitab al-Jabr Wa I-Mugabala" which translates roughly as

Modern surgery has benefited from Muslim surgeon Al Zahwari's inventions. Around the year 1,000, he reportedly performed the first caesarean operation and created the first pair of forceps. Philippe Huguen/AFP/Getty Images

Editor's Note: This story was originally published on January 29, 2010.

London (CNN) — Think of the origins of that staple of modern life, the cup of coffee, and Italy often springs to mind.

But in fact, Yemen is where the ubiquitous brew has its true origins.

Along with the first university, and even the toothbrush, it is among surprising Muslim inventions that have shaped the world we live in today.

The origins of these fundamental ideas and objects – the basis of everything from the bicycle to musical scales – are the focus of "1001 Inventions," a book celebrating "the forgotten" history of 1,000 years of Muslim heritage.

"There's a hole in our knowledge, we leap frog from the Renaissance to the Greeks," professor Salim al-Hassani, Chairman of the Foundation for Science, Technology and Civilisation, and editor of the book told CNN.

"1001 Inventions" is now an exhibition at London's Science Museum. Hassani hopes the exhibition will highlight the contributions of non-Western cultures – like the Muslim empire that once covered Spain and Portugal, Southern Italy and stretched as far as parts of China – to present day civilization.

Here Hassani shares his top 10 outstanding Muslim inventions:

1. Surgery

Around the year 1,000, the celebrated doctor Al Zahrawi published a 1,500 page illustrated encyclopedia of surgery that was used in Europe as a medical reference for the next 500 years. Among his many inventions, Zahrawi discovered the use of dissolving cat gut to stitch wounds – beforehand a second surgery had to be performed to remove sutures. He also reportedly performed the first caesarean operation and created the first pair of forceps.

2. Coffee

Tammy Ma

Lawrence Livermore's National Ignition Facility (NIF) conducts research in the high-energy-density realm of physics. NIF helps Livermore carry out its stockpile stewardship mission, enabling the Laboratory to ensure the nuclear deterrent's safety, security, reliability, and effectiveness. Experiments at NIF are also laying the groundwork to advance the nation's energy security by demonstrating the feasibility of nuclear fusion as a clean source of energy.

Dr. Tammy Ma is a plasma physicist at NIF. She leads experiments aimed at achieving fusion ignition by using NIF's 192 laser beams to compress fuel capsules containing deuterium and tritium (isotopes of hydrogen) in a process called inertial confinement fusion (ICF). The goal is to achieve sustained thermonuclear fusion, where the fuel fuses into heavier elements, and many times more energy is released than it took to initiate the reaction. The scientific and engineering challenges are vast, but the potential to produce abundant clean energy, as well as to better understand the physics of a process that powers all the stars in the universe is irresistible.

"What I love about working at Livermore is that we do science with a purpose. Whether it's national security, or energy research, or climate change, it all has an angle that's actually achievable and has real significance," says Ma. "You bring together great people to work on difficult projects...It's not one single scientist in his or her own little lab that can figure it all out. You need big teams and a lot of resources and you need support from the scientific community and the government, and you get all that here. Hopefully what we do has a positive impact on society and human life."

Ma earned her bachelor's degree in aerospace engineering from Caltech in 2005, then received her master's degree in 2008, and Ph.D. in 2010, both from the University of California, San Diego. Ma always knew that LLNL was one of the most exciting places to be—she wanted to work with the biggest, most energetic laser in the world, to help push the frontiers of fusion research.

Following graduate school, she completed a postdoc at LLNL before becoming a staff scientist in 2012. Ma was recently awarded the Presidential Early Career Award for Science and Engineering, the highest honor bestowed by the United States government on early-career science and engineering professionals. She also received the American Physical Society 2016 Thomas H. Stix Award for Outstanding Early Career Contributions to Plasma Physics Research.

Early Career Research Award

Tammy Ma has been named a 2018 recipient of a prestigious Early Career Research Program award from the Department of Energy's Office of Science. The program is designed to bolster the nation's scientific workforce by providing support to exceptional researchers during the crucial early career years, when many scientists do their most formative work. Under the program, Ma will receive a total of $2,500,000 over five years for her proposal, "Multi-ps short-pulse laser-driven particle acceleration for novel HED and ICF applications."

CNN US Watch Listen Live TV Sign in

The nuclear fusion reaction must be repeated, extended and scaled before the comparison sticks. And the race is on to make it work.

"But that's what makes it so exciting, right?" lead scientist Tammy Ma told CNN. "The potential is so great for clean, abundant, limitless, affordable energy. It will be tough. It won't be easy. But it's worth doing."

Nuclear fusion: How long until this breakthrough discovery can power your house

Ma's office is a giant box of lasers the size of three football fields in the corner of a 7,000-acre lab in Livermore. Running across the soaring white ceilings are miles of square tubes holding 192 of the most energetic lasers in the world, all snaking toward a round room at the center.

The very middle of this target chamber becomes the hottest place in the solar system every time they run a fusion experiment, and it is covered with enough gleaming machinery that J.J. Abrams used it to portray the warp core of the USS Enterprise in "Stark Trek Into Darkness."

With a legacy of delays and cost overruns, the National Ignition Facility was wryly nicknamed the "National Almost Ignition Facility," or "NAIF," by critics in Congress. If not for its work studying nuclear weaponry without the need for test explosions, the program might have lost funding years ago.

From Wikipedia, the free encyclopedia

Tammy Ma is an American plasma physicist who works on inertial confinement fusion at the Lawrence Livermore National Laboratory.[1]

Tammy Ma	
Alma mater	California Institute of Technology University of California San Diego
Scientific career	
Fields	Plasma physics
Institutions	Lawrence Livermore National Laboratory
Thesis	*Electron generation and transport in intense relativistic laser-plasma interactions relevant to fast ignition ICF* (2010)
Doctoral advisor	Farhat Beg

Education and career [edit]

Ma studied aerospace engineering at the California Institute of Technology, graduating in 2005. She went to the University of California, San Diego for graduate study, earning a master's degree in 2008 and completing her Ph.D. in 2010.[1]

After postdoctoral research at the Lawrence Livermore National Laboratory, she joined the laboratory as a staff scientist in 2012.[1]

Recognition [edit]

Ma was a recipient of the Presidential Early Career Award for Scientists and Engineers,[1] in 2013.[2] She was the 2016 winner of the Thomas H. Stix Award for Outstanding Early Career Contributions to Plasma Physics Research of the American Physical Society (APS), "for innovation and leadership in quantifying hydrodynamic instability mix in inertial confinement fusion implosions at the National Ignition Facility and for key contributions to experiments demonstrating fusion fuel gains exceeding unity".[3] In 2021, she won the Excellence in Fusion Engineering Award of the Fusion Power Associates,[2] and was named a Fellow of the American Physical Society, after a nomination from the APS Division of Plasma Physics, "for outstanding scientific contributions and leadership in the field of intense laser-matter interactions and inertial fusion energy science".[4]

The pot de fer, known to the Arabs as midfa, was the ancestor of all subsequent forms of cannon. Materials evolved from bamboo to wood to iron quickly enough for the Egyptian Mamelukes to employ the weapon against the Mongols at the battle of Ain Jalut in 1260, which ended the Mongol advance into the Mediterranean world. A wooden cup on the end of the arrow trapped gas behind the projectile.

© Ian Heath 1978

MAMLUK ENGINEER WITH MIDFA

A certain al-Hassan al-Rammah describes and illustrates the Midfa in a work of c. 1280-1290. It was clearly an early firearm, made of wood with a barrel only as deep as its muzzle width, used to fire Bunduks (?bullets) or feathered bolts. The charge filled a third of

Midfa, the Egyptian secret weapon used to defeat the Mongol army in the 13th century

In the 12th century, there was a wave of Christian crusaders determined to convert other religions and pagan worshipers into their folds. This campaign was spearheaded by the Mongol army, which was led by the Turk, Kitbuga. Their raid started with Syria in 1259 and swept through Damascus and Aleppo till the caravan made a stopover at the Mediterranean Sea. They had plans to take over Egypt's capital, Cairo, but decided to give the rulers an option to submit or be forced into submission. The Mongol envoy sent to Mamlūk sultan, al-Muẓaffar Sayf al-Dīn Quṭuz, returned with a strong warning from the Egyptian ruler, emphasizing they were not walkovers.

Still angered by the proposal of the Mongolian army, the Mumluks, led by Qutuz, waged a military expedition against the Mongolian forces in Gaza. They fought a Mongol army of 20,000 at Ain Jalut, which is also known as Goliath's spring. The leverage the Mamluks exercised over the Mongol army was due to army General Baybars' familiarity with the terrain since his teenage years when he was once held there as a fugitive. His strategy enabled the Mamluks to subdue the Mongol forces on the battlefield, according to Britannica.

The plan was to capitalize on one of the tactics of the Mongols where they feign interest in trapping their enemies. While the Mongols followed the bait, his army hid behind trees in wait to ambush the enemy forces. When their adversaries fell for the trick, the Mamluk army attacked them from all sides, leaving them with a heavy blow of assault from a sea of arrows. Though the Mongols fought hard and viciously, the Mumluks won the battle that day.

How Ramjets Work
Updated Apr 16, 2024
Key Takeaways
A ramjet is a type of air-breathing jet engine that operates on the principle of compressing incoming air without the need for rotating parts.
It relies on the high-speed forward motion of the aircraft to compress air, making it suitable for supersonic and hypersonic flight.
Guinness Recognizes NASA's X-43A Scramjet Speed Record
NASA
It's official. The new world speed record for a jet powered aircraft, set by NASA in November, has been officially recognized by Guinness World Records.
The accomplishment, the third and final flight in the experimental X-43A project, demonstrated that an advanced form of air-breathing (jet) engine could power an aircraft at nearly 10 times the speed of sound. Data from the unpiloted, 12-foot-long research vehicle show that its revolutionary "scramjet" engine worked successfully at Mach 9.6 or nearly 7,000 mph, as it flew at about 109,000 feet over the Pacific Ocean west of California.
The flight was the culmination of NASA's Hyper-X Program, a

Acrobatics (Latin: akrobatē — climb upward) is usually understood as
• a kind of physical exercises;
• a kind of performing arts;
• a sport.
Acrobatics requires extraordinary balance, agility, flexibility, control, concentration and motor coordination. A person who performs acrobatics is called an acrobat. Acrobatic skills were known in ancient Egypt, Greece, Rome and China. In the 19th century, acrobatic performance became popular in circuses of Europe. In the 20th century it became an organized sport with leagues and championships.

Ali Ramdani (born 18 April 1984), better known by his stage name Lilou, is an Algerian-French b-boy breakdancer. He is part of the French crew Pockemon Crew and the all-star team LEGION X. Since the beginning of his career in 1999, he has won many international prizes, both with his crew and as a solo dancer. He has had a black belt in Kung Fu since he was sixteen. He practices Islam and can speak Algerian Arabic, French and English.
Lilou was the winner of the b-boy competition Red Bull BC One in 2005 and 2009. He is one of the only four competitors to have won the Red Bull BC One twice, the other three being Hong 10, Victor and Menno. He also won Battle of the Year in 2003 with Pockemon Crew. In 2005, Lilou won the Chief Rocka award at the UK Bboy Championships. The following year, he was part of the Pockemon team that won the Crews competition at the UK Bboy Championships. In 2006, Lilou was featured in the game B-Boy, released by FreeStyleGames. In 2008, Lilou took part in Chemical Brothers' music video "Midnight Madness". He also appears in the film StreetDance 2. In 2012, he joined Madonna's MDNA Tour as a dancer and choreographer. In 2014, he became the winner of Undisputed. In doing so, he became the world champion b-boy in 2014. He lists Michael Jackson, Zinedine Zidane, Muhammad Ali, and Jamiroquai as influences.

About this Item

Title

A street Arab

Summary

"Shows one of New York's street gamins going through various acrobatic evolutions; he turns handsprings backward and forward, walks the crab, does cart wheels and other kindred feats. An exceptionally unique part of the performance is his standing on his head and twisting around like a top. It is safe to say he will be bald-headed at an early age"--Edison films catalog.

Capoeira: From Slave Combat Game to Global Martial Art

Matthias Röhrig Assunção

https://doi.org/10.1093/acrefore/9780199366439.013.293

Published online: 25 February 2019

Summary

Capoeira is a martial art that developed from combat games enslaved Africans brought to Brazil. It is systematically documented since the beginning of the 19th century in Rio de Janeiro and later in other port cities. During the 19th century capoeira was increasingly practiced by the poor free people, black and of mixed ancestry, and also by white immigrants. Capoeira gangs controlled their territories against intruders and allied with political parties until the Republican purge of 1890. Capoeira survived best in Bahia, where it remained more associated with other forms of Afro-Brazilian culture and acquired many of its features still extant in present-day capoeira. From the 1930s onward, capoeira masters such as Bimba and Pastinha modernized capoeira, leading to the emergence of the Regional and Angola styles. Bahian capoeiristas migrated to Rio de Janeiro and São Paulo in search of better opportunities during the 1950–1970s. There they and their students developed what later became known as "Contemporary capoeira" (*Capoeira Contemporânea*) which is the most practiced style today. Capoeira was and is practiced in various ways: as a friendly game or as a fight, as a combat sport, or as an Afro-Brazilian cultural activity. Since the 1980s, capoeira has undergone a process of globalization and is now practiced in many countries around the world. Capoeira is the only martial art of the African Diaspora that is known and practiced worldwide. Writing on Capoeira has rapidly grown in a number of disciplines, leading to the constitution of its own interdisciplinary field of study.

Nationality	Yemeni
Date of Birth	15 December 1975
Arrival at Guantanamo	May 2003

~~(U//FOUO)~~ Omar Muhammad Ali al-Rammah (YM-1017) was probably a low-level mujahidin fighter in Bosnia during the mid-1990s before becoming a facilitator for al-Qa'ida–affiliated extremists in the late 1990s. He may have trained at al-Qa'ida–associated camps in Afghanistan before relocating to Georgia in mid-2001 to support the Chechen jihad. Rammah was arrested in April 2002 in an operation in which he was to provide detonators for a remote-controlled explosive device.

trusted but low-level mujahidin facilitator while he aspired to enter Chechnya to fight. He arranged to acquire fraudulent passports; and sought to acquire weapons, ammunition, and other supplies for mujahidin operations in Chechnya." It was also claimed that he "probably received some training under Abu Atiya, who led a toxin network while in Georgia, but probably had no other inyolvement in its operations." Captured in April 2002 by Russian forces, he arrived at Guantánamo in May 2003 after being held in a variety of CIA "black sites" and US-run secret prisons in Afghanistan.

Moving on to his behavior in Guantánamo, the summary noted that, although he has been "moderately compliant," he "has refused to cooperate with US personnel and probably retains an extremist mindset" — again, the use of the word "probably" does not inspire confidence that this is necessarily an accurate assessment. The summary added that al-Rammah "has made no effort to reconnect with family," although this claim is contradicted by his civilian lawyer, Beth Jacob, who, in her submission to the board, posted below, explicitly states that "despite several efforts by the International Red Cross (which my firm has confirmed independently through conversations with the ICRC) and others — he has not been able to make contact with his family since his arrival at Guantánamo."

The summary also noted that al-Rammah

By Paul Guzzo Times staff

Published May 18, 2022

TAMPA — Construction crews estimated that the Samuel I. Davis Cigar Factory's brick work was an hour from completion when a fire gutted the tower sitting atop the 50,000-square-foot structure in 1910.

But the damage was repaired, and the three-story factory at 900 N. Howard Ave. was finished later that year.

According to one story, the first circus was staged by Ptolemy II Philadelphus, king of Egypt from 285 to 246 BC, who gathered animals, birds and reptiles from Africa and the Middle East and put them on parade for his people on days of celebration.
Next year, to celebrate the national circus' 20th anniversary, the Ministry of Culture is planning an international festival and will ask 35 countries to compete in a circus competition.
Why will there be no other Arabic circuses there?
In the conservative Islamic countries, the idea of a woman performing in a leotard and barelegged would be abhorrent, as would sexually integrated audiences. Security-conscious governments might also be wary of approving events that attract crowds, as a circus does. And in many other countries of this region, there is simply no tradition of humor as an art form—and little culture other than that of the desert heritage.
"The Egyptians are the only Arabs who would understand the value of laughter and having fun," said one observer.

TAMPA, Fla. (WFLA) – A former Massachusetts resident who built a dungeon inside his home and plotted to torture and eat children has asked a judge to order his release from prison because he is at high risk of contracting the coronavirus.

Boston 25 reports Geoffrey Portway filed a motion for compassionate release, citing the more than 40 cases of coronavirus in his prison.

In a handwritten letter, Portway said he was at higher risk of becoming infected because he is obese and asked to be sent back to England, where he is from.

PRESS RELEASE

Man Admits Transporting Child Pornography, Fleeing St. Louis

Wednesday, August 9, 2023

Share

For Immediate Release

U.S. Attorney's Office, Eastern District of Missouri

ST. LOUIS – A man from St. Louis on Wednesday admitted possessing and sharing child pornography and fleeing from St. Louis while on house arrest.

Daniel Bert, 38, pleaded guilty to a felony charge of transportation of child pornography. He admitted that after receiving two tips about Bert, the FBI discovered he was discussing his sexual interest in young children on Kik Messenger. An undercover FBI special agent began communicating with Bert on another app, Wickr, and Bert sent a picture of his genitals to the agent. He also expressed his sexual interest in young children, his plea agreement says. In text messages, Bert told the agent that he had a hard drive full of child pornography. On the same day that agents obtained a search warrant for Bert's home, Bert asked the undercover agent to join him in an online video chat during which Bert played videos containing child pornography.

THE RAPES IN BOSNIA: A MUSLIM SCHOOLGIRL'S ACCOUNT
ZENICA, BOSNIA -- Before the local Serb warlord took Mersiha away from her apartment to rape her on June 9, he told her not to cry. Mersiha, a Muslim schoolgirl, would be safe with him.
Then, Mersiha, 17, said in a lengthy interview here, the Serb ordered her, her 15-year-old sister and an 18-year-old friend into a car and drove them to a motel in their home town of Visegrad. The notorious Bosnian Serb White Eagle militia had just seized Visegrad, and Mersiha sensed in a terrifying instant that the victors were going to treat women as spoils of war.

Chatting About Jewishness with the Greatest Jewish Porn Stars

Does a background in Judaism make you a better adult actor?

AK By Adam Kowac

December 10, 2014, 9:05pm Share Tweet Snap

JAMES DEEN. PHOTO VIA DOC JOHNSON/WIKIMEDIA COMMONS.

James Deen is going out to the desert to fuck, but first, he has to make his way to the bank.

If you have a "Jews love money" joke in mind, now would be the time to make it.

The crown prince of porn is totally OK with jokes about his Semitism. You would be too if your nice, Jewish, boy-next-door looks had made you arguably the biggest (heh) male porn star of all time.

By now, his bio is well known. Born in Los Angeles County to successful engineer parents, he grew up in an upper-middle-class household in Pasadena. Rather than following in his parents' white-collar footsteps, however, he says he made the decision to go into porn while still in kindergarten. His slight build, smile, and tendency to somehow communicate an innate sweetness while balls-deep in a colleague's asshole gained him legions of female fans, rocketing him to porn star fame, and eventually, real fame. But before the blowjobs, the profiles in GQ, and the time he costarred with Lindsay Lohan in a crowdfunded film, Deen was just Bryan Matthew Sevilla, a boy who went to synagogue on the high holidays like all the other Yids.

"I don't know if I'm the only [Jewish porn star]," he says in a voice that recalls every overly excited Jew-boy I ever went to summer camp with. "But I'm definitely the loudest one about my Jewish heritage."

He's part of a long and proud tradition of porn stars who are not just Jewish, but whose Judaism can be considered a defining trait. Ron Jeremy may be notorious for his homeliness (despite the fact that as a young man, he was one mean, lean hunk of a dude), but the Hedgehog is fugly in a very stereotypical old-Jewish-man way: excess body hair, a prominent nose, a physique that's definitely had more than its share of kuegel and knishes.

Seymore Butts (a.k.a. Adam Glasser) transcended his fame as the pioneer of vaginal fisting porn to gain mainstream recognition in the early 2000s Showtime series *Family Business*, which featured both his impressive Jewfro and showed how his tight-knit Jewish family helped him run his porn empire. The appeal was tha: this could be the family next to you at any Reform synagogue service.

a case to watch: people v. adam glasser

could the adam glasser trial in los angeles be the first in a wave of obscenity cases brought by state and federal prosecutors emboldened by the bush administration? that was the question hanging over the adult film industry in late 2001. but on march 20, 2002--the day the case would have gone to trial--glasser and his attorney announced they had reached a settlement with the los angeles city attorney's office. he pled guilty to a public nuisance charge and paid a $1000 fine to a victims restitution fund. glasser also agreed to offer an edited version of "tampa tushy fest, part 1" for california buyers. however, under the plea agreement, glasser is free to sell the unedited version in california without fear of future obscenity charges. glasser called the settlement 'a great day for the adult industry, the free speech movement and...the millions of consumers who enjoy their rights to watch the adult entertainment of their choice."

Here's some background on the case. Glasser's trial would have taken place in the porn industry's backyard -- Los Angeles. Scheduled for late February 2002, it would have been the city's first obscenity case to go before a jury since 1993.

Adam Glasser (known in the porn business as "Seymore Butts") and his company Seymore Inc. were charged with two counts of obscenity for a 1998 video called "Tampa Tushy Fest, Part 1." Glasser was offered a plea bargain with probation and a small fine, but turned it down.

As in Glasser's other sex videos -- his company, which he says is worth $2 million, releases about 20 films every year -- this film shows hardcore (i.e., explicit) anal sex, oral sex, and vaginal sex. It also shows "fisting," with women inserting their hands inside of one another.

Deputy L.A. city attorney Deborah Sanchez said she was prosecuting because "Tampa Tushy Fest, Part 1" is filled with scenes that depict sexuality in "a patently offensive way." (**Read** more in Sanchez's extended interview with FRONTLINE. **WARNING: This interview contains explicit descriptions of sexual acts.**)

a case to watch: people v. adam glasser

could the adam glasser trial in los angeles be the first in a wave of obscenity cases brought by state and federal prosecutors emboldened by the bush administration? that was the question hanging over the adult film industry in late 2001. but on march 20, 2002--the day the case would have gone to trial--glasser and his attorney announced they had reached a settlement with the los angeles city attorney's office. he pled guilty to a public nuisance charge and paid a $1000 fine to a victims restitution fund. glasser also agreed to offer an edited version of "tampa tushy fest, part 1" for california buyers. however, under the plea agreement, glasser is free to sell the unedited version in california without fear of future obscenity charges. glasser called the settlement "a great day for the adult industry, the free speech movement and...the millions of consumers who enjoy their rights to watch the adult entertainment of their choice."

Here's some background on the case. Glasser's trial would have taken place in the porn industry's backyard -- Los Angeles. Scheduled for late February 2002, it would have been the city's first obscenity case to go before a jury since 1993.

Adam Glasser (known in the porn business as "Seymore Butts") and his company Seymore Inc. were charged with two counts of obscenity for a 1998 video called "Tampa Tushy Fest, Part 1." Glasser was offered a plea bargain with probation and a small fine, but turned it down.

As in Glasser's other sex videos -- his company, which he says is worth $2 million, releases about 20 films every year -- this film shows hardcore (i.e., explicit) anal sex, oral sex, and vaginal sex. It also shows "fisting," with women inserting their hands inside of one another.

Deputy L.A. city attorney Deborah Sanchez said she was prosecuting because "Tampa Tushy Fest, Part 1" is filled with scenes that depict sexuality in "a patently offensive way." (Read more in Sanchez's extended interview with FRONTLINE. WARNING: This interview contains explicit descriptions of sexual acts.)

Sahih al-Bukhari » Military Expeditions led by the Prophet (pbuh) (Al-Maghaazi) - كتاب المغازى

Narrated Abu `Uthman:

I heard from Sa`d, the first man who has thrown an arrow in Allah's Cause, and from Abu Bakra who jumped over the wall of the Ta'if Fort along with a few persons and came to the Prophet. They both said, "We heard the Prophet saying, " If somebody claims to be the son of somebody other than his father knowingly, he will be denied Paradise (i.e. he will not enter Paradise).' " Narrated Ma`mar from `Asim from Abu Al-`Aliya or Abu `Uthman An-Nahdi who said. "I heard Sa`d and Abu Bakra narrating from the Prophet." `Asim said, "I said (to him), 'Very trustworthy persons have narrated to you.' He said, 'Yes, one of them was the first to throw an arrow in Allah's Cause and the other came to the Prophet in a group of thirty-three persons from Ta'if.'

حَدَّثَنَا مُحَمَّدُ بْنُ بَشَّارٍ، حَدَّثَنَا غُنْدَرٌ، حَدَّثَنَا شُعْبَةُ، عَنْ عَاصِمٍ، قَالَ سَمِعْتُ أَبَا عُثْمَانَ، قَالَ سَمِعْتُ سَعْدًا ـ وَهُوَ أَوَّلُ مَنْ رَمَى بِسَهْمٍ فِي سَبِيلِ اللَّهِ ـ وَأَبَا بَكْرَةَ ـ وَكَانَ تَسَوَّرَ حِصْنَ الطَّائِفِ فِي أُنَاسٍ ـ فَجَاءَ إِلَى النَّبِيِّ صلى الله عليه وسلم فَقَالاَ سَمِعْنَا النَّبِيَّ صلى الله عليه وسلم يَقُولُ " **مَنِ ادَّعَى إِلَى غَيْرِ أَبِيهِ وَهُوَ يَعْلَمُ فَالْجَنَّةُ عَلَيْهِ حَرَامٌ** ". وَقَالَ هِشَامٌ وَأَخْبَرَنَا مَعْمَرٌ، عَنْ عَاصِمٍ، عَنْ أَبِي الْعَالِيَةِ، أَوْ أَبِي عُثْمَانَ النَّهْدِيِّ قَالَ سَمِعْتُ سَعْدًا، وَأَبَا، بَكْرَةَ عَنِ النَّبِيِّ صلى الله عليه وسلم. قَالَ عَاصِمٌ قُلْتُ لَقَدْ شُهِدَ عِنْدَكَ رَجُلاَنِ حَسْبُكَ بِهِمَا. قَالَ أَجَلْ أَمَّا أَحَدُهُمَا فَأَوَّلُ مَنْ رَمَى بِسَهْمٍ فِي سَبِيلِ اللَّهِ، وَأَمَّا الآخَرُ فَنَزَلَ إِلَى النَّبِيِّ صلى الله عليه وسلم ثَالِثَ ثَلاَثَةٍ وَعِشْرِينَ مِنَ الطَّائِفِ.

Hundreds of New Testaments torched in Israel

STORY HIGHLIGHTS

- Israeli police to probe recent burning of New Testaments in Or-Yehuda
- Deputy mayor admits collecting "Messianic propaganda," but did not support burning
- Anti-Defamation League, other groups criticize burning

By Mark Bixler
CNN

(CNN) -- Police in Israel are investigating the burning of hundreds of New Testaments in a city near Tel Aviv, an incident that has alarmed advocates of religious freedom.

Investigators plan to review photographs and footage showing "a fairly large" number of New Testaments being torched this month in the city of Or-Yehuda, a police spokesman, Micky Rosenfeld, said Wednesday.

News accounts in Israel have quoted Uzi Aharon, the deputy mayor of Or-Yehuda, as saying he organized students who burned several hundred copies of the New Testament. The deputy mayor gave interviews to Israeli radio and television stations after word of the incident surfaced about two weeks ago.

Soon he was talking with Russian, Italian and French television stations, "explaining to their highly offended audiences back home how he had not meant for the Bibles to be burned, and trying to undo the damage caused by the news (and photographs) of Jews burning New Testaments," The Jerusalem Post reported.

Aharon told CNN on Wednesday that he collected New Testaments and other "Messianic propaganda" that had been handed out in the city but that he did not plan or organize a burning. Instead, he said, three teenagers set fire to a pile of New Testaments while he was not present. Once he learned what was going on, he said, he stopped the burning.

The episode has worried defenders of Israel's minority population of Messianic Jews, who consider themselves Jewish but believe in the divinity of Jesus, as do Christians. It also has concerned evangelical Christians in North America, Europe and Asia, who visit Israel by the hundreds of thousands.

Don't Miss

- U.S. donor says Israeli leader received $150,000
- Clash, crash-landing mar Israel's 60th birthday party
- In Depth: Israel at 60

Calev Myers, an attorney for Messianic Jews in Israel, told CNN he plans to file a formal complaint Thursday with the national police at the request of the United Christian Council in Israel, an umbrella organization for a few dozen Christian organizations outside Israel.

"I hope the people who are responsible for breaking the law will be indicted and prosecuted," he said.

About 200 New Testaments were burned, Aharon said, but he saved another 200.

His goal was to stop attempts to distribute Christian literature in the city, he said.

Myers, however, said he doubts that Messianic Jewish missionaries distributed the New Testaments. He said it's not clear how the volumes found their way into homes in Or-Yehuda.

The deputy mayor told CNN he respects the New Testament and would not do what has been done to the Jews in the past -- a reference to Nazi burning of Jewish and other books in the 1930s, and other occasions when Jewish texts, including sacred ones, were burned.

Myers said his complaint will ask the authorities to investigate possible violations of two Israeli laws. One forbids the destruction or desecration of any religious icon or item that a group holds sacred. Another bans

Based on the popular blog, Porn4Jews, *Kosher Porn* marries traditional Jewish values with hilarious modern-day memes.

Shalom! If you came here in search of pornography, we suggest that you quietly step away and continue your search elsewhere. But, if Hebrew-speaking, challah-eating mensches turn you on, then Mazel Tov! Your prayers have been answered. This kind of "porn" is nudity-free, 100 percent kosher-certified, and, if we did our job right -- pretty damn funny. In other words, this porn is marriage material. This collection of photos paired with hilarious captions is the perfect gift book for Jews this Hanukkah season or any time of year. L'chain!

From Wikipedia, the free encyclopedia

Lotfi Aliasker Zadeh[3] (/ˈzɑ deɪ/; Azerbaijani: *Lütfi Rəhim oğlu Əliəsgərzadə*,[6] Persian: لطفی علی‌عسکرزاده;[7] 4 February 1921 – 6 September 2017)[1][3] was a mathematician, computer scientist, electrical engineer, artificial intelligence researcher, and professor[7] of computer science at the University of California, Berkeley. Zadeh is best known for proposing fuzzy mathematics, consisting of several fuzzy-related concepts: fuzzy sets,[8] fuzzy logic,[9] fuzzy algorithms,[10] fuzzy semantics,[11] fuzzy languages,[12] fuzzy control,[13] fuzzy systems,[14] fuzzy probabilities,[15] fuzzy events,[16] and fuzzy information.[16] Zadeh was a founding member of the Eurasian Academy.[1][17]

Lotfi A. Zadeh

(2016)

Born	Lotfi Aliaskerzadeh 4 February 1921 Baku, Azerbaijan Soviet Socialist Republic
Died	6 September 2017 (aged 96)[1][3] Berkeley, California, US[4]
Alma mater	University of Tehran Massachusetts Institute of Technology Columbia University
Known for	Founder of fuzzy mathematics, fuzzy set theory, and fuzzy logic, Z numbers, Z-transform
Spouse	Fay Zadeh
Children	2, including Norman Zada
Awards	Eringen Medal (1976) IEEE Hamming Medal (1992)[1] Rufus Oldenburger Medal (1993) IEEE Medal of Honor (1995)[1] 2012 BBVA Foundation Frontiers of Knowledge Award Honorary Doctorate of Tehran University (2016)[2] ACM Fellow IEEE Fellow AAAS Fellow AAAI Fellow

Early life and career

Azerbaijan

Zadeh was born in Baku, Azerbaijan SSR,[18] as **Lotfi Aliaskerzadeh**.[19] His father was Rahim Aleskerzade, an Iranian Muslim Azerbaijani[20] journalist from Ardabil on assignment from Iran, and his mother was Fanya (Feyga[21]) Korenman, a Jewish pediatrician from Odesa, Ukraine, who was an Iranian citizen.[22][23][24][25] The Soviet government at this time courted foreign correspondents, and the family lived well while in Baku.[26] Zadeh attended elementary school for three years there,[26] which he said "had a significant and long-lasting influence on my thinking and my way of looking at things."[27]

Iran

In 1931, when Stalin began agricultural collectivization,[21] and Zadeh was ten, his father moved his family back to Tehran, Iran. Zadeh was enrolled in Alborz High School, a missionary school,[21] where he was educated for the next eight years, and where he met his future wife,[26] Fay (Faina[21]) Zadeh, who said that he was "deeply influenced" by the "extremely decent, fine, honest and helpful" Presbyterian missionaries from the United States who ran the college. "To me they represented the best that you could find in the United States – people from the Midwest with strong

Fuzzy logic and neural network technologies

Applications of fuzzy logic technologies in NASA projects are reviewed to examine their advantages in the development of neural networks for aerospace and commercial expert systems and control. Examples of fuzzy-logic applications include a 6-DOF spacecraft controller, collision-avoidance systems, and reinforcement-learning techniques. The commercial applications examined include a fuzzy autofocusing system, an air conditioning system, and an automobile transmission application. The practical use of fuzzy logic is set in the theoretical context of artificial neural systems (ANSs) to give the background for an overview of ANS research programs at NASA. The research and application programs include the Network Execution and Training Simulator and faster training algorithms such as the Difference Optimized Training Scheme. The networks are well suited for pattern-recognition applications such as predicting sunspots, controlling posture maintenance, and conducting adaptive diagnoses.

In the field of artificial intelligence, the designation **neuro-fuzzy** refers to combinations of artificial neural networks and fuzzy logic.

Sketch of a neuro-fuzzy system implementing a simple Sugeno–Takagi controller.[1]

Overview [edit]

Neuro-fuzzy hybridization results in a hybrid intelligent system that combines the human-like reasoning style of fuzzy systems with the learning and connectionist structure of neural networks. Neuro-fuzzy hybridization is widely termed as fuzzy neural network (FNN) or neuro-fuzzy system (NFS) in the literature. Neuro-fuzzy system (the more popular term is used henceforth) incorporates the human-like reasoning style of fuzzy systems through the use of fuzzy sets and a linguistic model consisting of a set of IF-THEN fuzzy rules. The main strength of neuro-fuzzy systems is that they are universal approximators with the ability to solicit interpretable IF-THEN rules.

The strength of neuro-fuzzy systems involves two contradictory requirements in fuzzy modeling: interpretability versus accuracy. In practice, one of the two properties prevails. The neuro-fuzzy in fuzzy modeling research field is divided into two areas: linguistic fuzzy modeling that is focused on interpretability, mainly the Mamdani model; and precise fuzzy modeling that is focused on accuracy, mainly the Takagi-Sugeno-Kang (TSK) model.

Although generally assumed to be the realization of a fuzzy system through connectionist networks, this term is also used to describe some other configurations including:

- Deriving fuzzy rules from trained RBF networks.
- Fuzzy logic based tuning of neural network training parameters.
- Fuzzy logic criteria for increasing a network size.
- Realising fuzzy membership function through clustering algorithms in unsupervised learning in SOMs and neural networks.
- Representing fuzzification, fuzzy inference and defuzzification through multi-layers feed-forward connectionist networks.

It must be pointed out that interpretability of the Mamdani-type neuro-fuzzy systems can be lost. To improve the interpretability of neuro-fuzzy systems, certain measures must be taken, wherein important aspects of interpretability of neuro-fuzzy systems are also discussed.[2]

A recent research line addresses the data stream mining case, where neuro-fuzzy systems are sequentially updated with new incoming samples on demand and on-the-fly. Thereby, system updates not only include a recursive adaptation of model parameters, but also a dynamic evolution and pruning of model components (neurons, rules), in order to handle concept drift and dynamically changing system behavior adequately and to keep the systems/models "up-to-date" anytime. Comprehensive surveys of various evolving neuro-fuzzy systems approaches can be found in [3] and [4]

Pseudo outer-product based fuzzy neural networks [edit]

Pseudo outer product-based fuzzy neural networks (**POPFNN**) are a family of neuro-fuzzy systems that are based on the linguistic fuzzy model.[8]

Three members of POPFNN exist in the literature:

- **POPFNN-AARS(S)**, which is based on the Approximate Analogical Reasoning Scheme[8]
- **POPFNN-CRI(S)**, which is based on commonly accepted fuzzy Compositional Rule of Inference[7]

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

For the training group of Chinese track athletes, see Ma Junren.

The **Ma clique** or **Ma family warlords**[1] is a collective name for a group of Hui (Muslim Chinese) warlords in Northwestern China who ruled the Chinese provinces of Qinghai, Gansu and Ningxia for 10 years from 1919 until 1928. Following the collapse of the Qing dynasty in 1912, the region came under Chinese Muslim warlord Ma Qi's control until the Northern Expedition by the Republic of China consolidated central control in 1928. There were three families in the Ma clique ("Ma" being a common Hui rendering of the common Muslim name "Muhammad"), each of them respectively controlled, parts of Gansu, Ningxia and Qinghai. The three most prominent members of the clique were Ma Bufang, Ma Hongkui, and Ma Hongbin, collectively known as the **Xibei San Ma** (Chinese: 西北三馬; *Three Ma of the Northwest*). Some contemporary accounts, such as Edgar Snow's, described the clique as the "Four Ma" (rather than Three), adding Ma Bufang's brother Ma Buqing to the list of the top warlords.[2] Other prominent Ma's included Ma Anliang, Ma Qi, Ma Lin, Ma Hu-shan, and Ma Zhongying.

Governor of Qinghai (1938–1949)	Ma Bufang
Governor of Ningxia (1931–1948)	Ma Hongkui

Ma Clique [edit]

The Ma Clique warlords were all generals in the military of the Republic of China, who controlled most of Mainland China until it was overtaken by the communist People's Liberation Army. The clique was begun by Muslim generals who served in the military of the Qing dynasty, most notably in the Kansu Braves army, who fought in the Boxer Rebellion against invading foreign forces. It was continued by two generations of their descendants.

After the Xinhai Revolution overthrew the Qing, the Ma Clique Generals declared their allegiance to the Republic of China. Unlike the Mongols, Hui Muslims refused to secede from the Republic, and Ma Qi quickly used his diplomatic and military powers to make the Tibetan and Mongol nobles recognize the Republic of China government as their overlord, and sent a message to President Yuan Shikai reaffirming that Qinghai was securely in the Republic. He replaced "Long, Long, Long, Live the reigning Emperor", with "Long live the Republic of China" on inscriptions.[3] Ma Anliang also agreed to join the new Republic of China government.[4]

When the Kuomintang seized power in the Northern Expedition, the Ma Clique warlords became members of the Kuomintang party, and their armies were renamed as divisions of the National Revolutionary Army. The Ma Clique Ninghai Army under General Ma Qi was renamed the National Revolutionary Army 26th Division.

ABSTRACT

Following the 1911 Xinhai Rebellion, the new leadership began to stress the fundamental unity of the peoples of the new Republic of China, even as newspaper commentaries foretold the need for separate Muslim representation as the only way to buy the participation of that constituency in the new state. Influential Chinese Muslim military leaders controlled much of the northwest; their participation in the new state was crucial to its survival. However, whilst the legacies of a nineteenth century process of minoritization meant it was often

From Wikipedia, the free encyclopedia

Rajeev Motwani (Hindi: राजीव मोटवानी , 24 March 1962 – 5 June 2009) was an Indian American professor of Computer Science at Stanford University whose research focused on theoretical computer science. He was a special advisor to Sequoia Capital. He was a winner of the Gödel Prize in 2001.[2][3][4]

Education [edit]

Rajeev Motwani was born in Jammu, Jammu and Kashmir, India on 24 March 1962, and grew up in New Delhi.[5] His father was in the Indian Army. He had two brothers. As a child, inspired by luminaries like Gauss, he wanted to become a mathematician. Motwani went to St Columba's School, New Delhi. He completed his B.Tech. in Computer Science from the Indian Institute of Technology Kanpur in Kanpur, Uttar Pradesh in 1983 and got his Ph.D. in Computer Science from the University of California, Berkeley in Berkeley, California, United States in 1988, under the supervision of Richard M. Karp.[1]

Career [edit]

Motwani joined Stanford soon after U.C. Berkeley. He founded the Mining Data at Stanford project (MIDAS), an umbrella organization for several groups looking into new and innovative data management concepts. His research included data privacy, web search, robotics, and computational drug design. He is also one of the originators of the Locality-sensitive hashing algorithm.

Motwani was one of the co-authors (with Larry Page and Sergey Brin, and Terry Winograd) of an influential early paper on the PageRank algorithm. He also co-authored another seminal search paper *What Can You Do With A Web In Your Pocket* with those same authors.[6] PageRank was the basis for search techniques of Google (founded by Page and Brin), and Motwani advised or taught many of Google's developers and researchers,[7] including the first employee, Craig Silverstein.[8]

He was an author of two widely used theoretical computer science textbooks: *Randomized Algorithms* with Prabhakar Raghavan[9] and *Introduction to Automata Theory, Languages, and Computation* with John Hopcroft and Jeffrey Ullman.[10]

He was an avid angel investor and helped fund a number of startups to emerge from Stanford. He sat on boards including Google, Kaboodle, Mimosa Systems (acquired by Iron Mountain Incorporated), Adchemy, Baynote, Vuclip, NeoPath Networks (acquired by Cisco Systems in 2007), Tapulous and Stanford Student Enterprises. He was active in the Business Association of Stanford Entrepreneurial Students (BASES).[11][12][13]

He was a winner of the Gödel Prize in 2001 for his work on the PCP theorem and its applications to hardness of approximation.[14][15]

The Early Google Papers: Rajeev Motwani's Contributions To Search

Michael Arrington

@arrington/fang-en / 4:26 PM CDT • June 6, 2009

Comment

What can you do with a Web in your Pocket?

Sergey Brin * Rajeev Motwani † Lawrence Page † Terry Winograd §

Larry Page and Sergey Brin have always given Professor Rajeev Motwani significant credit for helping them create what would eventually become Google. Today, as I say my personal goodbye to the man who helped so many people in our community, I'm also spending some time going back and reading some of the early papers that Rajeev co-authored describing how PageRank could become the basis for a new kind of search engine.

In a 1998 paper called *"What Can You Do With A Web In Your Pocket"* Brin, Motwani, Page and Terry Winograd say *"...we have developed a global ranking of Web pages called PageRank based on the link structure of the Web that has properties that are useful for search and navigation..we have used PageRank to develop a novel search engine called Google, which also makes heavy use of anchor text."*

An even earlier paper in 1998 that the four co-authored called *"The PageRank Citation Ranking: Bringing Order to the Web"* went into much more detail on PageRank. *"In this paper, we take advantage of the link structure of the Web to produce a global "importance" ranking of every web page. This ranking, called PageRank, helps search*

Randomized Algorithms 1st Edition

by Rajeev Motwani (Author), Prabhakar Raghavan (Author)

4.5 ★★★★☆ 33 ratings

See all formats and editions

For many applications, a randomized algorithm is either the simplest or the fastest algorithm available, and sometimes both. This book introduces the basic concepts in the design and analysis of randomized algorithms. The first part of the text presents basic tools such as probability theory and probabilistic analysis that are frequently used in algorithmic applications. Algorithmic examples are also given to illustrate the use of each tool in a concrete setting. In the second part of the book, each chapter focuses on an important area to which randomized algorithms can be applied, providing a comprehensive and representative selection of the algorithms that might be used in each of these areas. Although written primarily as a text for

Man sentenced to 47 years to life for kidnapping 9-year-old girl from upstate New York park

FILE - Craig N. Ross Jr. is arraigned before Judge James A. Murphy III on charges related to the kidnapping of a 9-year-old from Moreau Lake State Park, Nov. 17, 2023, at Saratoga County Court in Ballston Spa, N.Y. Ross was sentenced Wednesday, April 17, 2024, to 47 years to life in prison for kidnapping and sexually assaulting a 9-year-old girl who went missing from a state park in upstate New York last year. BALLSTON SPA, N.Y. (AP) — A man was sentenced Wednesday to 47 years to life in prison for kidnapping and sexually assaulting a 9-year-old girl who went missing from a state park in upstate New York last year.

Craig N. Ross Jr. pleaded guilty in February to taking the girl in September from a campground at Moreau Lake State Park, a rural area about 35 miles (60 kilometers) north of Albany. The disappearance sparked a 48-hour-search that ended when she was found alive at a camper Ross was staying in.

ALEXANDRIA, Va. (AP) — A civilian contractor sent to work as an interrogator at Iraq's infamous Abu Ghraib prison resigned within two weeks of his arrival and told his corporate bosses that mistreatment of detainees was likely to continue.

Jurors saw the October 2003 email from Rich Arant, who worked for military contractor CACI, during testimony Wednesday in a lawsuit filed by three Abu Ghraib survivors. The former prisoners are suing CACI, alleging that the Reston-Virginia based company shares responsibility for the mistreatment they endured.

CACI had a contract to supply interrogators to the Army after the 2003 invasion of Iraq, and scrambled to supply the needed personnel. The first CACI interrogators arrived at Abu Ghraib on Sept. 28 of that year.

Arant sent his resignation letter to CACI on Oct. 14. He informed his bosses about

PRESS RELEASE

Leader Of Notorious Newark Heroin Distribution Ring Sentenced To 14 Years In Prison On Drug Conspiracy Charges

Wednesday, June 27, 2018

Share

For Immediate Release

U.S. Attorney's Office, District of New Jersey

NEWARK, N.J. – An Essex County, New Jersey, man was sentenced today to 168 months in prison for his leadership role in a massive drug distribution ring responsible for selling millions of dollars' worth of heroin out of a residential building near a high school in Newark, U.S. Attorney Craig Carpenito announced.

Quawee Jones, a/k/a "Hatman," 34, of Newark, previously pleaded guilty before U.S. District Judge Jose L. Linares to a superseding information charging him with conspiracy to distribute heroin. Judge Linares imposed the sentence today in Newark federal court

According to documents filed in the case and statements made in court:

Jones and his co-defendants operated a heroin distribution marketplace out of the first floor hallway of a residential building at 25 Johnson Avenue in Newark. The building is just a few doors away from the Malcolm X. Shabazz High School and the Terrell James Park playground. The conspiracy was led by Quawee Jones and Almalik Anderson, who, along with other heroin dealers that worked with them, took advantage of the building's location on a dead-end street, making it difficult for law enforcement to infiltrate the distribution network despite a constant stream of buyers entering the building at all hours of the day.

"Lookouts" were paid by the defendants to alert them to any police activity coming

Page, Brin, and **Scott Hassan**—the rarely acknowledged "third founder" of Google—were building a machine that converts the time we spend exploring the Internet into money as a means to an end. Money was just the first step in the grand plan. Hassan, who bailed out of Google early, is still trying to cure death and colonize the solar system. Page and Brin stayed on, and changed as Google did—monetized, and thoroughly civilized. "It's really depressing," said one early employee.

How a billionaire who wrote Google's original code created a robot revolution

Alex Krotts

Updated February 12, 2015

Willow Garage

Screenshot / YouTube

One of he PR2s at its graduation ceremony

In May 2010, eleven 400-pound humanoid robots posed before their proud "parents" and supporters in an office in Menlo Park, California.

Then, the lights went down and music rumbled on. With blue spotlights flashing, the robots began a coordinated dance to the '80s hit "Air Robots," swiveling their heads, waving flags clutched in their "hands," and moving with flaunts and flourishes that had the crowd hooting with glee.

This raucous display was the "graduation ceremony" thrown for the 'bots by Willow Garage, the company that had created them. Each one had cost roughly$400,000. And they were all about to be given away to enter the real world for free.

Although the now-defunct research-lab-startup hybrid might not ring any bells to you now, it was one of the most influential forces in modern robotics. The freewheeling robot collective jumpstarted the current race to apply robotics' components like computer vision, manipulation, and autonomy into applications for everything from drones and autonomous cars to warehouse operations at places like Google, Amazon and car companies like BMW. Googlealone acquired three of the robot companies spawned by Willow.

Founded by an eccentric billionaire who preached a "robot revolution," Willow Garage made enormous strides in robotics hardware and software, most notably through the research bots, called PR2s, and the creation of an open source robot operating system that's still being used by academics, engineers, and hobbyists around the world today.

At its apex, the Garage was a whimsical menagerie of really bright people with diverse specialties building nearly "smart" robots, until it ultimately succumbed to some of the same forces that have challenged many promising Silicon Valley startups.

Here's the fascinating story of how Willow Garage came to be, fell apart, and continues to live on today.

Suitable Technologies

Not-so-humble beginnings

Willow Garage founder Scott Hassan is a big-picture thinker. He's the kind of person who will veer from a conversation about telepresence into ruminating on what the world will be like once money becomes completely worthless because robots will be doing all our work for us.

He was one of the first people to invest in mysterious augmented reality Magic Leap back in 2012. Earlier this month, Magic Leap raised more than $700 million at a whopping $4.5 billion valuation.

In fact, he's the exactly kind of person who you would expect to get along with "moonshot" king and Alphabet CEO Larry Page.

Hassanmet Page and Sergey Brin while working on an integrated Digital Libraries project at Stanford. He ended up programming much of the original search engine that eventually became Google.

From Wikipedia, the free encyclopedia

Scott Hassan is a computer programmer and entrepreneur who was the main programmer of the original Google Search engine, then known as BackRub. He was research assistant at Stanford University at the time. Hassan left before Google was officially founded as a company.[1][2]

In 1997 Hassan founded FindMail, later renamed to eGroups.com, an email list management web site. He owned 5.7% of eGroups in March 2000 when the company filed a Form S-1. eGroups was later bought by Yahoo! for $432m in August 2000 in a stock deal and became Yahoo! Groups.[3][4]

In 2006 Hassan started Willow Garage, a robotics research lab and technology incubator. The organization created the open source robotics software suite ROS (Robot Operating System). Willow Garage shut down in early 2014.[5][6]

XPRIZE DOMAINS WHO WHAT ACT STORIES DONATE

← BACK

SCOTT HASSAN

Benefactor of the Global Learning XPRIZE

Scott Hassan created Suitable Technologies with the goal of redefining presence, by giving people the power to choose when and where to be present, regardless of geographic location. Prior to Suitable, Scott founded Willow Garage, combining his belief in open source technology and his passion for bringing robotics into everyday life. Scott has been a driving force behind some of the most influential Internet companies and projects. He was the founder of eGroups (now Yahoo! Groups) and was the key software architect and developer of Google, Alexa Internet and the Stanford Digital Library. Scott invests in start-ups that aim to make fundamental quality of life improvements for citizens around the world.

Page, Brin, and **Scott Hassan**—the rarely acknowledged "third founder" of Google—were building a machine that converts the time we spend exploring the Internet into money as a means to an end. Money was just the first step in the grand plan. Hassan, who bailed out of Google early, is still trying to cure death and colonize the solar system. Page and Brin stayed on, and changed as Google did—monetized, and thoroughly civilized. "It's really depressing," said one early employee.

Water-raising machines [edit]

Al-Jazari invented five machines for raising water,[1] as well as watermills and water wheels with cams on their axle used to operate automata,[34] in the 12th and 13th centuries, and described them in 1206. It was in these water-raising machines that he introduced his most important ideas and components.

al-Jazari's hydropowered saqiya chain pump device.

Saqiya chain pumps [edit]

The first known use of a crankshaft in a chain pump was in one of al-Jazari's saqiya machines. The concept of minimizing intermittent working is also first implied in one of al-Jazari's *saqiya* chain pumps, which was for the purpose of maximising the efficiency of the saqiya chain pump. Al-Jazari also constructed a water-raising saqiya chain pump which was run by hydropower rather than manual labour, though the Chinese were also using hydropower for chain pumps prior to him. Saqiya machines like the ones he described have been supplying water in Damascus since the 13th century up until modern times,[35] and were in everyday use throughout the medieval Islamic world.[36] Interestingly, the depiction of the chain in al-Jazari's pump appears to be in the form of a Möbius strip, from long before the Möbius strip was first identified as an object of study in mathematics.[37]

Double-action suction pump with valves and reciprocating piston motion [edit]

Citing the Byzantine siphon used for discharging Greek fire as an inspiration,[38] al-Jazari went on to describe his version of suction pipes, suction pump, double-action pump, and made early uses of valves and a crankshaft-connecting rod mechanism, when he developed a twin-cylinder reciprocating piston suction pump. This pump is driven by a water wheel, which drives, through a system of gears, an oscillating slot-rod to which the rods of two pistons are attached. The pistons work in horizontally opposed cylinders, each provided with valve-operated suction and delivery pipes. The delivery pipes are joined above the centre of the machine to form a single outlet into the irrigation system. This water-raising machine had a direct significance for the development of modern engineering. This pump is remarkable for three reasons:[9][39][40][41]

- The first known use of a true suction pipe (which sucks fluids into a partial vacuum) in a pump.
- The first application of the double-acting principle.
- The conversion of rotary to reciprocating motion via the crank-connecting rod mechanism.

Al-Jazari's suction piston pump could lift 13.6 metres of water,[*citation needed*] with the help of delivery pipes. It was not, however, any more efficient than the noria commonly used by the Muslim world at the time.[42]

Water supply system [edit]

al-Jazari developed the earliest water supply system to be driven by gears and hydropower, which was built in 13th century Damascus to supply water to its mosques and Bimaristan hospitals. The system had water from a lake turn a scoop-wheel and a system of gears which transported jars of water up to

itself. This great Muslim physicist also discovered the camera obscura phenomenon, which explains how the eye sees images upright due to the connection between the optic nerve and the brain.

7. Music

Muslim musicians have had a profound impact on Europe, dating back to Charlemagne tried to compete with the music of Baghdad and Cordoba, according to Hassani. Among many instruments that arrived in Europe through the Middle East are the lute and the rahab, an ancestor of the violin. Modern musical scales are also said to derive from the Arabic alphabet.

8. Toothbrush

According to Hassani, the Prophet Mohammed popularized the use of the first toothbrush in around 600. Using a twig from the Meswak tree, he cleaned his teeth and freshened his breath. Substances similar to Meswak are used in modern toothpaste.

9. The crank

Many of the basics of modern automatics were first put to use in the Muslim world, including the revolutionary crank-connecting rod system. By converting rotary motion to linear motion, the crank enables the lifting of heavy objects with relative ease. This technology, discovered by Al-Jazari in the 12th century, exploded across the globe, leading to everything from the bicycle to the internal combustion engine.

10. Hospitals

"Hospitals as we know them today, with wards and teaching centers, come from 9th century Egypt," explained Hassani. The first such medical center was the Ahmad ibn Tulun Hospital, founded in 872 in Cairo. Tulun hospital provided free care for anyone who needed it – a policy based on the Muslim tradition of caring for all who are sick. From Cairo, such hospitals spread around the Muslim world.

3. Flying machine

"Abbas ibn Firnas was the first person to make a real attempt to construct a flying machine and fly," said Hassani. In the 9th century he designed a winged apparatus, roughly resembling a bird costume. In his most famous trial near Cordoba in Spain, Firnas flew upward for a few moments, before falling to the ground and partially breaking his back. His designs would undoubtedly have been an inspiration for famed Italian artist and inventor Leonardo da Vinci's hundreds of years later, said Hassani.

4. University

In 859 a young princess named Fatima al-Firhi founded the first degree-granting university in Fez, Morocco. Her sister Miriam founded an adjacent mosque and together the complex became the al-Qarawiyyin Mosque and University. Still operating almost 1,200 years later, Hassani says he hopes the center will remind people that learning is at the core of the Islamic tradition and that the story of the al-Firhi sisters will inspire young Muslim women around the world today.

5. Algebra

The word algebra comes from the title of a Persian mathematician's famous 9th century treatise "Kitab al-Jabr Wa l-Mugabala" which translates roughly as

Modern surgery has benefited from Muslim surgeon Al Zahwari's inventions. Around the year 1,000, he reportedly performed the first caesarean operation and created the first pair of forceps. Philippe Huguen/AFP/Getty Images

Editor's Note: This story was originally published on January 29, 2010.

London (CNN) — Think of the origins of that staple of modern life, the cup of coffee, and Italy often springs to mind.

But in fact, Yemen is where the ubiquitous brew has its true origins.

Along with the first university, and even the toothbrush, it is among surprising Muslim inventions that have shaped the world we live in today.

The origins of these fundamental ideas and objects – the basis of everything from the bicycle to musical scales – are the focus of "1001 Inventions," a book celebrating "the forgotten" history of 1,000 years of Muslim heritage.

"There's a hole in our knowledge, we leap frog from the Renaissance to the Greeks," professor Salim al-Hassani, Chairman of the Foundation for Science, Technology and Civilisation, and editor of the book told CNN.

"1001 Inventions" is now an exhibition at London's Science Museum. Hassani hopes the exhibition will highlight the contributions of non-Western cultures – like the Muslim empire that once covered Spain and Portugal, Southern Italy and stretched as far as parts of China – to present day civilization.

Here Hassani shares his top 10 outstanding Muslim inventions:

1. Surgery

Around the year 1,000, the celebrated doctor Al Zahrawi published a 1,500 page illustrated encyclopedia of surgery that was used in Europe as a medical reference for the next 500 years. Among his many inventions, Zahrawi discovered the use of dissolving cat gut to stitch wounds – beforehand a second surgery had to be performed to remove sutures. He also reportedly performed the first caesarean operation and created the first pair of forceps.

2. Coffee

The method of al-Rammah is the first in which wood ashes were used in the manufacture of saltpetre.

which—perish the thought—whiskey would not exist.

Torpedo *(13th century)*

What it is: The first self-propelled projectile for sea warfare.

Why it matters: The Chinese invented gunpowder, but Hassan al-Rammah got the idea of stuffing it into a metal case and shooting it across water to shock and awe an enemy ship. In The Book of Fighting on Horseback and With War Engines (1280), al-Rammah dubbed it a "self-moving and combustible egg." This spiny missile would be filled with saltpeter, flammable liquid, and metal filings. Once ignited, combustion would propel the torpedo to its target, where it might explode.

From Wikipedia, the free encyclopedia

Hasan al-Rammah (Arabic: حسن الرماح, died 1295) was a Syrian[1][2][3] Arab[4] chemist and engineer during the Mamluk Sultanate who studied gunpowders and explosives, and sketched prototype instruments of warfare, including the first torpedo.[5] Al-Rammah called his early torpedo "an egg which moves itself and burns." It was made of two sheet-pans of metal fastened together and filled with naphtha, metal filings, and potassium nitrate. It was intended to move across the surface of the water, propelled by a large rocket and kept on course by a small rudder.[6]

Al-Rammah devised several new types of gunpowder[7] and a new type of fuse and two types of lighters.[6]

7. Carry Out Halq and Taqsir

After sunset, pilgrims reach Muzadalifah for Maghrib and Asr prayers. One can rest until the night before Fajr's prayers to prepare for the next morning's ritual of pelting the Devil. Pilgrims take equal sized pebbles to throw at the Devil. On the 10th day, Dhu al-Hijjah pilgrims depart for Makkah to do Tawaf al-Ifadah & Saee before sunset. They must return to Mina to perform Rami, Nahr, and Halq.

Pilgrims are required to complete Rami or the stoning of the Devil on the 11th, 12th, and 13th days of Hajj. Seven stones of similar sizes are thrown at Jamrat al-Aqabah at noon each day. All pilgrims must depart for Makkah before sunset on 12th of Dhu al-Hijjah.

The stoning ceremony is only completed with animal sacrifice. Pilgrims can buy a sacrifice coupon or voucher, indicating that a sacrifice has taken place in their name. A lamb or a camel are the two options for sacrificial animals. The animal is slaughtered, and its meat is packed and given to the poor in the countries of the Middle East.

ADVERTISEMENT

Egyptian–US chemist Ahmed Zewail, the 'father of femtochemistry' who received the chemistry Nobel prize in 1999 for his work using ultrafast lasers to study chemical reactions, has died aged 70.

Born in Damanhour, Egypt, in 1946, Zewail gained his bachelor's and master's degrees at the University of Alexandria before moving to the US where he studied for a PhD at

From Wikipedia, the free encyclopedia

Ahmed Hassan Zewail (February 26, 1946 – August 2, 2016) was an Egyptian and American chemist,[4] known as the "father of femtochemistry".[5] He was awarded the 1999 Nobel Prize in Chemistry for his work on femtochemistry and became the first Egyptian and Arab to win a Nobel Prize in a scientific field,[6] and the second African to win a Nobel Prize in Chemistry. He was the Linus Pauling Chair Professor of Chemistry, a professor of physics, and the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.

Early life and education [edit]

Ahmed Hassan Zewail was born on February 26, 1946, in Damanhur, Egypt, and was raised in Desouk.[8] He received Bachelor of Science and Master of Science degrees in chemistry from Alexandria University before moving to the United States to complete his PhD at the University of Pennsylvania uncer the supervision of Robin M. Hochstrasser.[1][7]

Career [edit]

After completing his PhD, Zewail did postdoctoral research at the University of California, Berkeley, supervised by Charles B. Harris.[1] Following this, he was awarded a faculty appointment at the California Institute of Technology in 1976, and eventually became the first Linus Pauling Chair in Chemical Physics there.[1] He became a naturalized citizen of the United States on March 5, 1982.[9] Zewail was the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.[9]

Zewail was nominated and participated in President Barack Obama's Presidential Council of Advisors on Science and Technology (PCAST), an advisory group of the nation's leading scientists and engineers to advise the President and Vice President and formulate policy in the areas of science, technology, and innovation.[10]

Research [edit]

Zewail's key work was a pioneer of femtochemistry[5][11][12]—i.e. the study of chemical reactions across femtoseconds. Using a rapid ultrafast laser technique (consisting of ultrashort laser flashes), the technique allows the description of reactions on very short time scales – short

Ahmed H. Zewail (born February 26, 1946, Damanhur, Egypt—died August 2, 2016, Pasadena, California, U.S.) was an Egyptian-born chemist who won the Nobel Prize for Chemistry in 1999 for developing a rapid laser technique that enabled scientists to study the action of atoms during chemical reactions. The breakthrough created a new field of physical chemistry known as femtochemistry. Zewail was the first Egyptian and the first Arab to win a Nobel Prize in a science category.

After receiving B.S. (1967) and M.S. (1969) degrees from Alexandria University, Zewail attended the University of Pennsylvania, where he earned a doctorate in 1974. Two years later he joined the faculty at the California Institute of Technology, and in 1990 he was selected as the school's first Linus Pauling Professor of Chemical Physics. Zewail also served as a visiting professor at a number of institutions, including Texas A&M University, the University of Iowa, and American University at Cairo. He founded (2011) Zewail City of Science and Technology, a premier institute of technology in Cairo.

Britannica Quiz

Faces of Science

Because chemical reactions last only 10 to 100 femtoseconds (fs)—one femtosecond is 0.000000000000001 second, or 10^{-15}—many believed it would be impossible to study the events that constitute a reaction. In the late 1980s, however, Zewail was able to view the motion of atoms and molecules by using a method based on new laser technology capable of producing light flashes just tens of femtoseconds in duration. During the process, known

Ancient Gymnastics History
Posted on December 9, 2010 by Gymnastics Zone in Articles
There is little to no direct knowledge available about the earliest times of man's gymnastics activities. There is no doubt among historians that people performed gymnastics and gymnastics-related activities like tumbling, jumping, swinging movements and group acrobatics early in the history of mankind in a number of areas around the world.
The History of Sport, Exercise and Physical Fitness
Gymnastics is one of the world's oldest physical activities and sports and its roots can be traced back thousands of years. There is evidence of early forms of gymnastics in the ancient civilizations in the Middle East and Asia. Gymnastics, in the form of acrobatics, calisthenics, precision drills and disciplined exercise has been around since ancient times.
7000 Years and Counting
Gymnastics was most likely first depicted in Egyptians artifacts. The earliest known physical evidence of gymnastics can be found in the art of ancient Egypt, where female acrobats performed for the Pharaohs and the Egyptian nobility. Acrobats entertained Egyptian nobility around 7,000 years ago judging by ancient frescoes. Many of these drawings have been dated and authenticated as far back as 5000 BC. These Egyptian hieroglyphs depict such gymnastics activities as backbend variations and partner stunts.
No Bull Vaulting
Beginning about 2,700 BC, acrobats would vault over the backs of bulls on the island of Crete when the Minoan civilization flourished. This is recorded in a well-known fresco from Crete at the palace at Knossos. It depicts a vaulter performing what is either a cartwheel or handspring over a charging bull.
No Warm-Ups and No Practice Vaults
The art of bull leaping as developed in Minoan Crete was performed by both men and women. The athlete would run toward a charging bull, grab its horns, and when tossed into the air, would execute various aerial movements, landing on the bull's

Who Invented Acrobatics?
While it's impossible to know exactly who invented acrobatics, the Ancient Egyptians arguably thought to be the first people to record it through their captivating art and literature.
Acrobatics has emerged from traditions all around the world, and we have proof of it that comes from many thousands of years ago. Depictions of female acrobatic dancers performing feats like backbends and other acrobatic moves have been discovered at ancient sites.

Acrobatic Gymnastics – a balancing act
Practised by both men and women, Acrobatic Gymnastics is amongst the oldest known sports practised by the ancient Egyptians. The name comes from the Greek word 'acrobateo', meaning to rise or go forth.
Acrobatic Gymnastics is a modern and artistic discipline, which requires an extraordinary amount of courage and trust amongst gymnasts.
Acrobatic routines are choreographed to music and presented on a 12 X 12 metre sprung floor surface, Acrobatic Gymnastics is full of expression and provides gymnasts with a stage on which to shine.
In official competitions, Acrobatic Gymnastics offers five

Ali Ramdani (born 18 April 1984), better known by his stage name **Lilou**, is an Algerian-French b-boy breakdancer. He is part of the French crew Pockemon Crew and the all-star team LEGION X. Since the beginning of his career in 1999, he has won many international prizes, both with his crew and as a solo dancer. He has had a black belt in Kung Fu since he was sixteen. He practices Islam and can speak Algerian Arabic, French and English.

Lilou was the winner of the b-boy competition Red Bull BC One in 2005 and 2009. He is one of the only four competitors to have won the Red Bull BC One twice, the other three being Hong 10, Victor and Menno. He also won Battle of the Year in 2003 with Pockemon Crew. In 2005, Lilou won the Chief Rocka award at the UK Bboy Championships. The following year, he was part of the Pockemon team that won the Crews competition at the UK Bboy Championships. In 2006, Lilou was featured in the game *B-Boy*, released by FreeStyleGames. In 2008, Lilou took part in Chemical Brothers' music video "Midnight Madness". He also appears in the film *StreetDance 2*. In 2012, he joined Madonna's MDNA Tour as a dancer and choreographer. In 2014, he became the winner of Undisputed. In doing so, he became the world champion b-boy in 2014. He lists Michael Jackson, Zinedine Zidane, Muhammad Ali, and Jamiroquai as influences.

Capoeira: From Slave Combat Game to Global Martial Art
Matthias Röhrig Assunção
https://doi.org/10.1093/acrefore/9780199366439.013.293
Published online: 25 February 2019
Summary
Capoeira is a martial art that developed from combat games enslaved Africans brought to Brazil. It is systematically documented since the beginning of the 19th century in Rio de Janeiro and later in other port cities. During the 19th century capoeira was increasingly practiced by the poor free people, black and of mixed ancestry, and also by white immigrants. Capoeira gangs controlled their territories against intruders and allied with political parties until the Republican purge of 1890. Capoeira survived best in Bahia, where it remained more associated with other forms of Afro-Brazilian culture and acquired many of its features still extant in present-day capoeira. From the 1930s onward, capoeira masters such as Bimba and Pastinha modernized capoeira, leading to the emergence of the Regional and Angola styles. Bahian capoeiristas migrated to Rio de Janeiro and São Paulo in search of better opportunities during the 1950–1970s. There they and their students developed what later became known as "Contemporary capoeira" (*Capoeira Contemporânea*) which is the most practiced style today. Capoeira was and is practiced in various ways: as a friendly game or as a fight, as a combat sport, or as an Afro-Brazilian cultural activity. Since the 1980s, capoeira has undergone a process of globalization and is now practiced in many countries around the world. Capoeira is the only martial art of the African Diaspora that is known and practiced worldwide. Writing on Capoeira has rapidly grown in a number of disciplines, leading to the constitution of its own interdisciplinary field of study.

According to one story, the first circus was staged by Ptolemy II Philadelphus, king of Egypt from 285 to 246 BC, who gathered animals, birds and reptiles from Africa and the Middle East and put them on parade for his people on days of celebration.

Next year, to celebrate the national circus' 20th anniversary, the Ministry of Culture is planning an international festival and will ask 35 countries to compete in a circus competition.

Why will there be no other Arabic circuses there?

In the conservative Islamic countries, the idea of a woman performing in a leotard and barelegged would be abhorrent, as would sexually integrated audiences. Security-conscious governments might also be wary of approving events that attract crowds, as a circus does. And in many other countries of this region, there is simply no tradition of humor as an art form--and little culture other than that of the desert heritage.

"The Egyptians are the only Arabs who would understand the value of laughter and having fun," said one observer.

From Wikipedia, the free encyclopedia

The art of juggling has existed in various cultures throughout history. The beginning is uncertain. The first depictions were found in ancient Egypt, China, Greece, and Rome, as well as medieval and modern societies.

Ancient Egypt [edit]

The earliest record of toss juggling is a painting on the wall of Tomb 15 in Egypt's Beni Hasan cemetery complex. This tomb belonged to Baqet III, a provincial governor of Menat-Khufu (present day Minya) during the later years of the Eleventh Dynasty of Egypt.[17] It depicts female dancers and acrobats juggling up to three balls, and one of the girls juggling with her arms crossed.

In another Beni Hasan painting, four girls are playing a juggling game in which two girls throw and catch a ball while being carried on the backs of the others. Arthur Watson, in his 1907 article for *The Reliquary and Illustrated Archaeologist*, suggests that if a player dropped the ball in this game, it became that player's turn to become the bearer.[21]

Brooklyn Museum associate curator Dr. Robert Bianchi suggests that the appearance of jugglers in the Beni Hassan tomb may be "an analogy between balls and circular mirrors, as round things were used to represent solar objects, birth and death."[21]

This Egyptian wall painting from the wall of Tomb 15 at Beni Hasan appears to depict toss jugglers.

ANCIENT JUGGLING TOMBS – PART 1

September 10, 2020

(Haz clic aquí para español.)

One of the oldest representations of juggling dates from 1994 – 1781 BC, in the tombs at Beni Hasan. Due to the time that has passed and the little documentation that there is in this regard, researching before Christ juggling is a never-ending job. These investigations require deepening in disciplines such as archaeology, history, anthropology. It is not easy to unveil a new discovery about the ancient history of juggling. However, prominent juggling historians and researchers such as David Cain, Eric Åberg, Thom Wall, and others have provided us with invaluable data. All my admiration for them.

For my part, I did my homework to research some BC juggling tombs, and I was able to find some interesting things that I will share with you below.

In many articles on juggling history, the images on the tombs of Beni Hasan are discussed, saying that it was an Egyptian prince who marked his tomb with depictions of juggling. Beni Hasan is not actually a prince; it is the name of a town in Middle Egypt on the eastern bank of the Nile River where a necropolis is found, and there lie the remains of governors, monarchs and pharaohs.

From Wikipedia, the free encyclopedia

For other uses, see Circassian (disambiguation).

Circassians, also called **Cherkess** or **Adyghe** (Adyghe and Kabardian: Адыгэхэр, romanized: *Adygeiher*) are an indigenous Northwest Caucasian ethnic group and a nation; native to the historical country-region of Circassia in the North Caucasus.[29] As a consequence of the Circassian genocide perpetrated by the Russian Empire in the 19th century during the Russo-Circassian War, most Circassians were exiled from their homeland in Circassia to modern-day Turkey and the rest of the Middle East, where most of them are today.[30] In the early 1990s, the Unrepresented Nations and Peoples Organization estimated that there are as many as 3.7 million Circassians in diaspora in over 50 countries.[31]

The Circassian language is the ancestral language of the Circassian people,[32] and Islam has been the dominant religion among them since the 17th century.[33] Circassia has been repeatedly invaded since ancient times; its isolated terrain coupled with the strategic value external societies have placed on the region have greatly shaped the Circassian national identity.[34]

The Circassian flag consists of a green field charged with 12 gold stars and, in the center, three crossed arrows. The stars represent the 12 historical Circassian provinces: the Abzakh, the Besleney, the Bzhedugh, the Hatuqway, the Kabardians, the Mamkhegh, the Natukhaj, the Shapsugh, the Chemirgoy, the

Talk the Talk

In ancient Roman boxing, a circle would be marked out within an arena

The art of boxing, whereby two people enter a contest to see who can withstand the most punches from the other, dates back at least as far as the earliest civilisations and is probably one of the oldest sports of its kind in the history of fighting. Due to its simplicity, it can be speculated that even in the pre-civilized world, men would enter into such contests and over time it developed into a sport, with rudimentary rules and the use of equipment.

Ancient Boxing in the Earliest Civilisations

The earliest physical evidence portraying ancient boxing comes from the first known civilisation, Samaria (modern-day Iraq) where it is depicted on a number of carvings that are believed to have been produced in the third century BCE.

Some equipment seems to already be in use at this time and while the fighters are bare-fisted, they do have straps around their wrists that would have provided them with some support and protection for the small bones in the wrists and hands.

Bare knuckled boxing was also the norm in Egypt, as depicted on a sculpture from around 1350 BCE from Thebes (modern-day Luxor). It shows spectators watching three sets of fighters and what is interesting is that they seem to be performing for the pharaoh. The earliest representation of ancient boxing gloves in use comes from a Minoan fresco (pictured above) from Thera (modern-day Santorini) which is commonly known as the *Boxing Boys* and dates from around 1600 BCE.

A vase from the same region depicts what seems to be fighters wearing helmets as well as boxing gloves and it is believed that they may well have been used extensively at that time. There is some academic dispute on the purpose of ancient boxing gloves. While some scholars believe they were probably used as safety equipment for training purposes, others maintain that their shape may suggest that their purpose was to cause more damage to the opponent rather than to act as cushioning for the bones in the hand of the one doing the punching.

In the National Museum of Rome sits the bronze masterpiece [1]

Early Evidence

There is little doubt that boxing traces its origins to the earliest civilizations of the ancient Near East and Mediterranean. Terracotta reliefs dating from 2400 BC to 2000 BC found in ancient Mesopotamia (modern-day Iraq) depict unarmed combatants using their fists. Details are sparse as to whether the participants employed any covering on their hands or fought bare-knuckled. An Egyptian tomb relief from Thebes dating to the mid-fourteenth century BC features boxers fighting in front of spectators and perhaps the Pharaoh himself. Hieroglyphic captions on the relief have been translated as "Hit" and "You have no opponent," indicating a set of organized rules to the fight.[2]

It is during the late Bronze Age that we encounter the first definitive evidence of glove use by early pugilists. The "Boxer Vase" from Hagia Triada (1600–1500 BC) on the island of Crete clearly shows boxers using a wrist strap securing some material that protects the hand. We do not know if the material consisted of softer padding or a harder substance like leather or even metal, but due to the fact that the fighters are wearing military-style helmets with eye and cheek protection, we may infer that the headgear was intended to provide protection from gloves made of material capable of substantial damage. Boxing first appeared as a formal Olympic event in the 23rd Olympiad (688 BCE), but fist-fighting contests must certainly have had their origin in mankind's prehistory. The earliest visual evidence for boxing appears in Sumerian relief carvings from the 3rd millennium BCE. A relief sculpture from Egyptian Thebes (c. 1350 BCE) shows both boxers and spectators. The few extant Middle Eastern and Egyptian depictions are of bare-fisted contests with, at most, a simple band supporting the wrist; the earliest evidence of the use of gloves or hand coverings in boxing is a carved vase from Minoan Crete (c. 1500 BCE) that shows helmeted boxers wearing a stiff plate strapped to the fist.

Sports Facts: Where Did Boxing Originate?

August 20, 2022 by Martial Arts Culture

Who Invented Boxing?

And where did boxing originate? Historians have found numerous depictions of Egyptian art that depict early forms of boxing, wrestling, and grappling between people.

The exact origins of who invented boxing are largely unknown, and the belief is that the ancient Egyptians were the first to develop a form of hand-to-hand combat as a form of self-defense.

In a world of 8 billion people, it can be hard to stand out from the crowd.

It sometimes takes persistence or creativity to get your hands on a Guinness World Records certificate that recognises your achievement.

However, some people are born with their talents and features and achieve recognition thanks to their incredible human form.

This is the case for siblings Mohamed and Huda Shehata (both Egypt).

Hyper-X

X-43A (Hyper-X) Program Overview

- First ever flight demonstration of an airframe-integrated scramjet powered hypersonic vehicle
- Primary objective was to validate the tools, test and analysis techniques, & design methods of scramjet powered, hypersonic vehicles
- Three flight project
  - Two flights at Mach 7
  - One flight at Mach 10

Hyper-X Research Vehicle (HXRV): ATK-GASL
- Hydrogen fueled scramjet engine
- Scaled version of a Mach 10 "cruise" configuration

Hyper-X Launch Vehicle (HXLV) - OSC
- Air launched from NASA's B-52
- Boosts HXRV to test condition
- Modified 1st Stage Pegasus booster

Hyper-X

Scramjets

- Allows for air-breathing flight at Mach 5+
- Forces and moments balanced to minimize trim drag and maximize thrust

Propulsion-airframe integrated scramjet

National Aeronautics and Space Administration

NASA Facts

NASA Hyper-X Program Demonstrates Scramjet Technologies

X-43A Flight Makes Aviation History

A modified Pegasus booster rocket ignites moments after release from the B-52B, beginning the acceleration of the X-43A over the Pacific Ocean in March of 2004. The X-43A vehicle is mounted on the nose of the rocket.

NASA made aviation history with the first and second successful flights of a scramjet-powered airplane at hypersonic speeds—speeds greater than Mach 5 or five times the speed of sound. Compared to a rocket-powered vehicle like the Space Shuttle, scramjet (supersonic combustion ramjet) powered vehicles promise more airplane-like operations for increased affordability, flexibility and safety for ultra high-speed flights within the atmosphere and into Earth orbit. Because they do not have to carry bulky oxygen tanks, as rockets must, vehicles powered by air-breathing scramjets can be smaller and lighter.

Researchers have worked for decades to demonstrate scramjet technologies, first in wind tunnels and computer simulations, and now in an airplane in flight. Ultimate applications include future hypersonic missiles, hypersonic airplanes, the first stage of two-stage-to-orbit reusable launch vehicles and single-stage-to-orbit reusable launch vehicles.

High-Risk, High-Payoff Program

The eight-year, approximately $230 million NASA Hyper-X program was a high-risk, high-payoff research program. It undertook challenges never before attempted. No vehicle powered by an air-breathing engine had ever flown at hypersonic speeds before the successful March 2004 flight. In addition, the rocket boost and subsequent separation from the rocket to get to the scramjet test condition had complex elements that had to work properly for mission success. Careful analyses and design were applied to reduce risks to acceptable levels; even so, some level of residual risk was inherent to the program.

Better designs for the future of hypersonic flight

In the 1960s, an improved ramjet was devised in which the burner could function supersonically. The modified **ramjet**, or **scramjet**, minimizes the losses due to the shock wave flow loss allowing the engine to produce enough thrust for hypersonic travel or speeds up to **Mach 15**.

Since the scramjet uses external air to power the combustor, it is much more efficient than a rocket, which must carry all of its oxygen on board. Scramjets are optimized for hypersonic flight and will not function at speeds below Mach 3, requiring a rocket to accelerate it up to critical engine stall speeds.

SEE ALSO: NEW AIRCRAFT TRAVELS MACH 7.5 WITH SCRAMJET ENGINE

The first successful test flight of a scramjet took place on July 30, 2002, by the University of Queensland's HyShot team and their international partners.

In 2004, NASA demonstrated it **X-43A scramjet-powered** aircraft, achieving speeds almost at **Mach 7**. Recent advancements in scramjet technology have seen the **HIFiRE 5b** jet travel at Mach 7.5. Although

This article is about the cult leader. For other people with the same name, see David Bi (disambiguation).

David Brandt Berg (February 18, 1919 – October 1, 1994), also known as **King David**, **Mo**, **Moses David**, **Father David**, **Dad**, or **Grandpa** to followers, was the founder and leader of the cult generally known as the Children of God[1] and subsequently as The Family International. Berg's group, founded in 1968 among the counterculture youth in Southern California, gained notoriety for incorporating sexuality into its spiritual message and recruitment methods. Berg and his organization were accused of a broad range of sexual misconduct, including child sexual abuse.

Life [edit]

Family heritage [edit]

Berg's maternal grandfather was John Lincoln Brandt (1860–1946), a Disciples of Christ minister, author, and lecturer of Muskogee, Oklahoma.[2] Brandt had a dramatic conversion in his mid-twenties and immediately entered full-time Christian service. For years he was a Methodist circuit rider. He later became a leader of the Alexander Campbell movement of the Disciples of Christ, a restoration movement that developed into the current Protestant denomination Christian Church (Disciples of Christ).[3]

Early years (1919–1969) [edit]

Berg was born on February 18, 1919, in Oakland, California.[4] During his early years, he u lived in or around Florida.[5]

He was the youngest of three children born to Hjalmar Emmanuel Berg and Virginia Lee Bi Christian evangelists.[6] His father was Swedish.[7]

Virginia and Hjalmar were expelled from the Disciples of Christ after publicly testifying of he healing, which was contrary to church doctrine. They subsequently joined a new denomina Christian and Missionary Alliance, shortly before David's birth. In later years, their missiona and disdain for denominational politicking often set them at variance with the conservative that church's hierarchy, causing them to work largely as independent pastors and evangeli

Berg spent his early years traveling with his parents, who pursued their evangelical missior they settled in Miami, Florida, after Virginia successfully led a series of large revivals at the

Trigger warning: child abuse, suicide

A survivor of one of the most controversial cults shared her harrowing experiences, highlighting the religious movement's exploitation of children, her advocacy against extremism, and the psychology behind cults

36-year-old Daniella Mestyanek Young detailed the abuse she suffered as a child growing up in the Children of God cult, exposing how the so-called "free love" ideals of the group promoted the sexual abuse of children.

Daniella escaped what has been labeled a "sex cult" at 15 and has since been working as a self-described "scholar of cults, extreme groups, and extremely bad leadership."

In a bombshell exposé with The Sun, published on Sunday (March 10), Daniella, a daughter of high-ranking members who was shuffled between compounds in the US, Mexico, and Brazil, explained that when the cult was in its prime, it brought in hundreds of millions of dollars, adding that her grandfather — a senior leader — "still runs the money."

In 1968, former priest David Berg founded Teens for Christ, which evolved to become the infamous Children of God cult, characterized by allegations of rape, child abuse, and religious prostitution.

The Children Of God: 5 Disturbing Facts About The Pro-Pedophilia Sex Cult

The sect still exists online and reportedly has 1,500 members in 80 countries.

August 24, 2021

Members of the 'Children of God' cult(via Discovery, Inc.)

By: Aaron Rasmussen

David Brandt Berg, a charismatic preacher, formed The Children of God in 1968. He believed the apocalypse was near and urged believers to survive on basic necessities by giving up their money and personal possessions to the group's leaders. He also infamously taught that God is love and love is sex.

In 1974, a New York attorney general's office report labeled The Children of God a cult, and its members were accused of sexual abuse, assault, incest and other crimes, *The Guardian* reported.

In one instance, the report stated, "a 14-year-old runaway who spent nine days at a COG commune testified that she was raped and because of her refusal to cooperate with the elders, was held in solitary confinement on no less than three separate occasions."

Despite the accusations, The Children of God continued to flourish for decades. Berg changed the cult's name to The Family of Love following the 1978 Jonestown mass suicide, and, in 2004, the group became known as The Family International.

Ahead are five other facts about the cult that imploded just over 40 years after it

Kenneth Copeland, a Texas-based televangelist, was confronted by a reporter who grilled him over his fleet of private planes. The exchange, which aired last month on Inside Edition, went viral and showed Copeland justifying his luxurious spending.

Inside Edition correspondent Lisa Guerrero asked Copeland about why he won't fly commercial as he was getting in a vehicle in Branson, Missouri.

He defended it, making it seem to be a vital means to his televangelism.

He said, "If I flew commercial, I'd have to stop 65% of what I'm doing."

Guerrero questioned him about a private jet he purchased from filmmaker Tyler Perry, the Gulfstream V.

He replied, "Well, that's none of your business."

Early life and career

Azerbaijan

Zadeh was born in Baku, Azerbaijan SSR,[18] as **Lotfi Aliaskerzadeh**.[19] His father was Rahim Aleskerzade, an Iranian Muslim Azerbaijani[20] journalist from Ardabil on assignment from Iran, and his mother was Fanya (Feygə[21]) Korenman, a Jewish pediatrician from Odesa, Ukraine, who was an Iranian citizen.[22][23][24][25] The Soviet government at this time courted foreign correspondents, and the family lived well while in Baku.[26] Zadeh attended elementary school for three years there,[26] which he said "had a significant and long-lasting influence on my thinking and my way of looking at things."[27]

Iran

In 1931, when Stalin began agricultural collectivization,[21] and Zadeh was ten, his father moved his family back to Tehran, Iran. Zadeh was enrolled in Alborz High School, a missionary school,[21] where he was educated for the next eight years, and where he met his future wife,[26] Fay (Faina[21]) Zadeh, who said that he was "deeply influenced" by the "extremely decent, fine, honest and helpful" Presbyterian missionaries from the United States who ran the college. "To me they represented the best that you could find in the United States – people from the Midwest with strong

Fuzzy logic and neural network technologies

Applications of fuzzy logic technologies in NASA projects are reviewed to examine their advantages in the development of neural networks for aerospace and commercial expert systems and control. Examples of fuzzy-logic applications include a 6-DOF spacecraft controller, collision-avoidance systems, and reinforcement-learning techniques. The commercial applications examined include a fuzzy autofocusing system, an air conditioning system, and an automobile transmission application. The practical use of fuzzy logic is set in the theoretical context of artificial neural systems (ANSs) to give the background for an overview of ANS research programs at NASA. The research and application programs include the Network Execution and Training Simulator and faster training algorithms such as the Difference Optimized Training Scheme. The networks are well suited for pattern-recognition applications such as predicting sunspots, controlling posture maintenance, and conducting adaptive diagnoses.

From Wikipedia, the free encyclopedia

This article **may need to be rewritten** to comply with Wikipedia's quality standards. You can help. The talk page may contain suggestions. *(May 2010)*

In the field of artificial intelligence, the designation **neuro-fuzzy** refers to combinations of artificial neural networks and fuzzy logic.

Sketch of a neuro-fuzzy system implementing a simple Sugeno-Takagi controller.[1]

Overview [edit]

Neuro-fuzzy hybridization results in a hybrid intelligent system that combines the human-like reasoning style of fuzzy systems with the learning and connectionist structure of neural networks. Neuro-fuzzy hybridization is widely termed as fuzzy neural network (FNN) or neuro-fuzzy system (NFS) in the literature. Neuro-fuzzy system (the more popular term is used henceforth) incorporates the human-like reasoning style of fuzzy systems through the use of fuzzy sets and a linguistic model consisting of a set of IF-THEN fuzzy rules. The main strength of neuro-fuzzy systems is that they are universal approximators with the ability to solicit interpretable IF-THEN rules.

The strength of neuro-fuzzy systems involves two contradictory requirements in fuzzy modeling: interpretability versus accuracy. In practice, one of the two properties prevails. The neuro-fuzzy in fuzzy modeling research field is divided into two areas: linguistic fuzzy modeling that is focused on interpretability, mainly the Mamdani model; and precise fuzzy modeling that is focused on accuracy, mainly the Takagi-Sugeno-Kang (TSK) model.

Although generally assumed to be the realization of a fuzzy system through connectionist networks, this term is also used to describe some other configurations including:

- Deriving fuzzy rules from trained RBF networks.
- Fuzzy logic based tuning of neural network training parameters.
- Fuzzy logic criteria for increasing a network size.
- Realising fuzzy membership function through clustering algorithms in unsupervised learning in SOMs and neural networks.
- Representing fuzzification, fuzzy inference and defuzzification through multi-layers feed-forward connectionist networks.

It must be pointed out that interpretability of the Mamdani-type neuro-fuzzy systems can be lost. To improve the interpretability of neuro-fuzzy systems, certain measures must be taken, wherein important aspects of interpretability of neuro-fuzzy systems are also discussed.[2]

A recent research line addresses the data stream mining case, where neuro-fuzzy systems are sequentially updated with new incoming samples on demand and on-the-fly. Thereby, system updates not only include a recursive adaptation of model parameters, but also a dynamic evolution and pruning of model components (neurons, rules), in order to handle concept drift and dynamically changing system behavior adequately and to keep the systems/models "up-to-date" anytime. Comprehensive surveys of various evolving neuro-fuzzy systems approaches can be found in [3] and.[4]

Pseudo outer-product based fuzzy neural networks [edit]

Pseudo outer product-based fuzzy neural networks (**POPFNN**) are a family of neuro-fuzzy systems that are based on the linguistic fuzzy model.[5]

Three members of POPFNN exist in the literature:

- **POPFNN-AARS(S)**, which is based on the Approximate Analogical Reasoning Scheme[6]
- **POPFNN-CRI(S)**, which is based on commonly accepted fuzzy Compositional Rule of Inference[7]

Ma clique

12 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

For the training group of Chinese track athletes, see Ma Junren.

The **Ma clique** or **Ma family warlords**[1] is a collective name for a group of Hui (Muslim Chinese) warlords in Northwestern China who ruled the Chinese provinces of Qinghai, Gansu and Ningxia for 10 years from 1919 until 1928. Following the collapse of the Qing dynasty in 1912, the region came under Chinese Muslim warlord Ma Qi's control until the Northern Expedition by the Republic of China consolidated central control in 1928. There were three families in the Ma clique ("Ma" being a common Hui rendering of the common Muslim name "Muhammad"), each of them respectively controlled, parts of Gansu, Ningxia and Qinghai. The three most prominent members of the clique were Ma Bufang, Ma Hongkui, and Ma Hongbin, collectively known as the **Xibei San Ma** (Chinese: 西北三馬, *Three Ma of the Northwest*). Some contemporary accounts, such as Edgar Snow's, described the clique as the "Four Ma" (rather than Three), adding Ma Bufang's brother Ma Buqing to the list of the top warlords.[2] Other prominent Ma's included Ma Anliang, Ma Qi, Ma Lin, Ma Hu-shan, and Ma Zhongying.

Governor of Qinghai (1938–1949)	Ma Bufang
Governor of Ningxia (1931–1948)	Ma Hongkui

Ma Clique [edit]

The Ma Clique warlords were all generals in the military of the Republic of China, who controlled most of Mainland China until it was overtaken by the communist People's Liberation Army. The clique was begun by Muslim generals who served in the military of the Qing dynasty, most notably in the Kansu Braves army, who fought in the Boxer Rebellion against invading foreign forces. It was continued by two generations of their descendants.

After the Xinhai Revolution overthrew the Qing, the Ma Clique Generals declared their allegiance to the Republic of China. Unlike the Mongols, Hui Muslims refused to secede from the Republic, and Ma Qi quickly used his diplomatic and military powers to make the Tibetan and Mongol nobles recognize the Republic of China government as their overlord, and sent a message to President Yuan Shikai reaffirming that Qinghai was securely in the Republic. He replaced "Long, Long, Long, Live the reigning Emperor", with "Long live the Republic of China" on inscriptions.[3] Ma Anliang also agreed to join the new Republic of China government.[4]

When the Kuomintang seized power in the Northern Expedition, the Ma Clique warlords became members of the Kuomintang party, and their armies were renamed as divisions of the National Revolutionary Army. The Ma Clique Ninghai Army under General Ma Qi was renamed the National Revolutionary Army 26th Division.

ABSTRACT

Following the 1911 Xinhai Rebellion, the new leadership began to stress the fundamental unity of the peoples of the new Republic of China, even as newspaper commentaries foretold the need for separate Muslim representation as the only way to buy the participation of that constituency in the new state. Influential Chinese Muslim military leaders controlled much of the northwest; their participation in the new state was crucial to its survival. However, whilst the legacies of a nineteenth century process of minoritization meant it was often

From Wikipedia, the free encyclopedia

Rajeev Motwani (Hindi: राजीव मोटवानी , 24 March 1962 – 5 June 2009) was an Indian American professor of Computer Science at Stanford University whose research focused on theoretical computer science. He was a special advisor to Sequoia Capital. He was a winner of the Gödel Prize in 2001.[2][3][4]

Education [edit]

Rajeev Motwani was born in Jammu, Jammu and Kashmir, India on 24 March 1962, and grew up in New Delhi.[5] His father was in the Indian Army. He had two brothers. As a child, inspired by luminaries like Gauss, he wanted to become a mathematician. Motwani went to St Columba's School, New Delhi. He completed his B.Tech. in Computer Science from the Indian Institute of Technology Kanpur in Kanpur, Uttar Pradesh in 1983 and got his Ph.D. in Computer Science from the University of California, Berkeley in Berkeley, California, United States in 1988, under the supervision of Richard M. Karp.[1]

Career [edit]

Motwani joined Stanford soon after U.C. Berkeley. He founded the Mining Data at Stanford project (MIDAS), an umbrella organization for several groups looking into new and innovative data management concepts. His research included data privacy, web search, robotics, and computational drug design. He is also one of the originators of the Locality-sensitive hashing algorithm.

Motwani was one of the co-authors (with Larry Page and Sergey Brin, and Terry Winograd) of an influential early paper on the PageRank algorithm. He also co-authored another seminal search paper *What Can You Do With A Web In Your Pocket* with those same authors.[6] PageRank was the basis for search techniques of Google (founded by Page and Brin), and Motwani advised or taught many of Google's developers and researchers,[7] including the first employee, Craig Silverstein.[8]

He was an author of two widely used theoretical computer science textbooks: *Randomized Algorithms* with Prabhakar Raghavan[9] and *Introduction to Automata Theory, Languages, and Computation* with John Hopcroft and Jeffrey Ullman.[10]

He was an avid angel investor and helped fund a number of startups to emerge from Stanford. He sat on boards including Google, Kaboodle, Mimosa Systems (acquired by Iron Mountain Incorporated), Adchemy, Baynote, Vuclip, NeoPath Networks (acquired by Cisco Systems in 2007), Tapulous and Stanford Student Enterprises. He was active in the Business Association of Stanford Entrepreneurial Students (BASES).[11][12][13]

He was a winner of the Gödel Prize in 2001 for his work on the PCP theorem and its applications to hardness of approximation.[14][15]

The Early Google Papers: Rajeev Motwani's Contributions To Search

Michael Arrington

@arrington?lang=en / 4:26 PM CDT • June 6, 2009

Comment

What can you do with a Web in your Pocket?

Sergey Brin * Rajeev Motwani † Lawrence Page † Terry Winograd §

Larry Page and Sergey Brin have always given Professor Rajeev Motwani significant credit for helping them create what would eventually become Google. Today, as I say my personal goodbye to the man who helped so many people in our community, I'm also spending some time going back and reading some of the early papers that Rajeev co-authored describing how PageRank could become the basis for a new kind of search engine.

In a 1998 paper called *"What Can You Do With A Web In Your Pocket"* Brin, Motwani, Page and Terry Winograd say *"...we have developed a global ranking of Web pages called PageRank based on the link structure of the Web that has properties that are useful for search and navigation..we have used PageRank to develop a novel search engine called Google, which also makes heavy use of anchor text."*

An even earlier paper in 1998 that the four co-authored called *"The PageRank Citation Ranking: Bringing Order to the Web"* went into much more detail on PageRank. *"In this paper, we take advantage of the link structure of the Web to produce a global "importance" ranking of every web page. This ranking, called PageRank, helps search*

Randomized Algorithms 1st Edition

by Rajeev Motwani (Author), Prabhakar Raghavan (Author)

4.5 ★★★★½ 33 ratings

See all formats and editions

For many applications, a randomized algorithm is either the simplest or the fastest algorithm available, and sometimes both. This book introduces the basic concepts in the design and analysis of randomized algorithms. The first part of the text presents basic tools such as probability theory and probabilistic analysis that are frequently used in algorithmic applications. Algorithmic examples are also given to illustrate the use of each tool in a concrete setting. In the second part of the book, each chapter focuses on an important area to which randomized algorithms can be applied, providing a comprehensive and representative selection of the algorithms that might be used in each of these areas. Although written primarily as a text for

How a billionaire who wrote Google's original code created a robot revolution

Alice Dredge

Updated February 13, 2014

Willow Garage

Screenshot / YouTube

One of the PR2s at its graduation ceremony

In May 2010, eleven 400-pound humanoid robots posed before their proud "parents" and supporters in an office in Menlo Park, California.

Then, the lights went down and music rumbled on. With blue spotlights flashing, the robots began a coordinated dance to the '90s hit "Mr Robots," swiveling their heads, waving flags clutched in their "hands," and moving with flaunts and flourishes that had the crowd hooting with glee.

This raucous display was the "graduation ceremony" thrown for the bots by Willow Garage, the company that had created them. Each one had cost roughly $400,000. And they were all about to be given away to enter the real world for free.

Although the now-defunct research-lab-startup hybrid might not ring any bells to you now, it was one of the most influential forces in modern robotics. The freewheeling robot collective jumpstarted the current race to apply robotics components like computer vision, manipulation, and autonomy into applications for everything from drones and autonomous cars to warehouse operations at places like Google, Amazon and car companies like BMW. Google alone acquired three of the robot companies spawned by Willow.

Founded by an eccentric billionaire who preached a "robot revolution," Willow Garage made enormous strides in robotics hardware and software, most notably through the research bots, called PR2s, and the creation of an open source robot operating system that's still being used by academics, engineers, and hobbyists around the world today.

At its apex, the Garage was a whimsical menagerie of really bright people with diverse specialties building really "smart" robots, until it ultimately succumbed to some of the same forces that have challenged many promising Silicon Valley startups.

Here's the fascinating story of how Willow Garage came to be, fell apart, and continues to live on today.

Suitable Technologies

Not-so-humble beginnings

Willow Garage founder Scott Hassan is a big-picture thinker. He's the kind of person who will veer from a conversation about telepresence into ruminating on what the world will be like once money becomes completely worthless because robots will be doing all our work for us.

He was one of the first people to invest in mysterious augmented reality Magic Leap back in 2012. Earlier this month, Magic Leap raised more than $700 million at a whopping $4.5 billion valuation.

In fact, he's the exactly kind of person who you would expect to get along with "moonshot" king and Alphabet CEO Larry Page.

Hassan met Page and Sergey Brin while working on an Integrated Digital Libraries project at Stanford. He ended up programming much of the original search engine that eventually became Google.

Water-raising machines [edit]

Al-Jazari invented five machines for raising water,[1] as well as watermills and water wheels with cams on their axle used to operate automata,[34] in the 12th and 13th centuries, and described them in 1206. It was in these water-raising machines that he introduced his most important ideas and components.

al-Jazari's hydropowered saqiya chain pump device.

Saqiya chain pumps [edit]

The first known use of a crankshaft in a chain pump was in one of al-Jazari's saqiya machines. The concept of minimizing intermittent working is also first implied in one of al-Jazari's *saqiya* chain pumps, which was for the purpose of maximising the efficiency of the saqiya chain pump. Al-Jazari also constructed a water-raising saqiya chain pump which was run by hydropower rather than manual labour, though the Chinese were also using hydropower for chain pumps prior to him. Saqiya machines like the ones he described have been supplying water in Damascus since the 13th century up until modern times,[35] and were in everyday use throughout the medieval Islamic world.[36] Interestingly, the depiction of the chain in al-Jazari's pump appears to be in the form of a Möbius strip, from long before the Möbius strip was first identified as an object of study in mathematics.[37]

Double-action suction pump with valves and reciprocating piston motion [edit]

Citing the Byzantine siphon used for discharging Greek fire as an inspiration,[38] al-Jazari went on to describe his version of suction pipes, suction pump, double-action pump, and made early uses of valves and a crankshaft-connecting rod mechanism, when he developed a twin-cylinder reciprocating piston suction pump. This pump is driven by a water wheel, which drives, through a system of gears, an oscillating slot-rod to which the rods of two pistons are attached. The pistons work in horizontally opposed cylinders, each provided with valve-operated suction and delivery pipes. The delivery pipes are joined above the centre of the machine to form a single outlet into the irrigation system. This water-raising machine had a direct significance for the development of modern engineering. This pump is remarkable for three reasons:[9][39][40][41]

- The first known use of a true suction pipe (which sucks fluids into a partial vacuum) in a pump.
- The first application of the double-acting principle.
- The conversion of rotary to reciprocating motion via the crank-connecting rod mechanism.

Al-Jazari's suction piston pump could lift 13.6 metres of water,[*citation needed*] with the help of delivery pipes. It was not, however, any more efficient than the noria commonly used by the Muslim world at the time.[42]

Water supply system [edit]

al-Jazari developed the earliest water supply system to be driven by gears and hydropower, which was built in 13th century Damascus to supply water to its mosques and Bimaristan hospitals. The system had water from a lake turn a scoop-wheel and a system of gears which transported jars of water up to

itself. This great Muslim physicist also discovered the camera obscura phenomenon, which explains how the eye sees images upright due to the connection between the optic nerve and the brain.

7. Music

Muslim musicians have had a profound impact on Europe, dating back to Charlemagne tried to compete with the music of Baghdad and Cordoba, according to Hassani. Among many instruments that arrived in Europe through the Middle East are the lute and the rahab, an ancestor of the violin. Modern musical scales are also said to derive from the Arabic alphabet.

8. Toothbrush

According to Hassani, the Prophet Mohammed popularized the use of the first toothbrush in around 600. Using a twig from the Meswak tree, he cleaned his teeth and freshened his breath. Substances similar to Meswak are used in modern toothpaste.

9. The crank

Many of the basics of modern automatics were first put to use in the Muslim world, including the revolutionary crank-connecting rod system. By converting rotary motion to linear motion, the crank enables the lifting of heavy objects with relative ease. This technology, discovered by Al-Jazari in the 12th century, exploded across the globe, leading to everything from the bicycle to the internal combustion engine.

10. Hospitals

"Hospitals as we know them today, with wards and teaching centers, come from 9th century Egypt," explained Hassani. The first such medical center was the Ahmad ibn Tulun Hospital, founded in 872 in Cairo. Tulun hospital provided free care for anyone who needed it – a policy based on the Muslim tradition of caring for all who are sick. From Cairo, such hospitals spread around the Muslim world.

3. Flying machine

Diane Watkins
Coldwell Banker Realty - Gundo
Homes.com

"Abbas ibn Firnas was the first person to make a real attempt to construct a flying machine and fly," said Hassani. In the 9th century he designed a winged apparatus, roughly resembling a bird costume. In his most famous trial near Cordoba in Spain, Firnas flew upward for a few moments, before falling to the ground and partially breaking his back. His designs would undoubtedly have been an inspiration for famed Italian artist and inventor Leonardo da Vinci's hundreds of years later, said Hassani.

4. University

In 859 a young princess named Fatima al-Firhi founded the first degree-granting university in Fez, Morocco. Her sister Miriam founded an adjacent mosque and together the complex became the al-Qarawiyyin Mosque and University. Still operating almost 1,200 years later, Hassani says he hopes the center will remind people that learning is at the core of the Islamic tradition and that the story of the al-Firhi sisters will inspire young Muslim women around the world today.

5. Algebra

The word algebra comes from the title of a Persian mathematician's famous 9th century treatise "Kitab al-Jabr Wa l-Mugabala" which translates roughly as

Modern surgery has benefited from Muslim surgeon Al Zahwari's inventions. Around the year 1,000, he reportedly performed the first caesarean operation and created the first pair of forceps. Philippe Huguen/AFP/Getty Images

Editor's Note: This story was originally published on January 29, 2010.

London (CNN) — Think of the origins of that staple of modern life, the cup of coffee, and Italy often springs to mind.

But in fact, Yemen is where the ubiquitous brew has its true origins.

Along with the first university, and even the toothbrush, it is among surprising Muslim inventions that have shaped the world we live in today.

The origins of these fundamental ideas and objects – the basis of everything from the bicycle to musical scales – are the focus of "1001 Inventions," a book celebrating "the forgotten" history of 1,000 years of Muslim heritage.

"There's a hole in our knowledge, we leap frog from the Renaissance to the Greeks," professor Salim al-Hassani, Chairman of the Foundation for Science, Technology and Civilisation, and editor of the book told CNN.

"1001 Inventions" is now an exhibition at London's Science Museum. Hassani hopes the exhibition will highlight the contributions of non-Western cultures – like the Muslim empire that once covered Spain and Portugal, Southern Italy and stretched as far as parts of China – to present day civilization.

Here Hassani shares his top 10 outstanding Muslim inventions:

1. Surgery

Around the year 1,000, the celebrated doctor Al Zahrawi published a 1,500 page illustrated encyclopedia of surgery that was used in Europe as a medical reference for the next 500 years. Among his many inventions, Zahrawi discovered the use of dissolving cat gut to stitch wounds – beforehand a second surgery had to be performed to remove sutures. He also reportedly performed the first caesarean operation and created the first pair of forceps.

2. Coffee

The method of al-Rammah is the first in which wood ashes were used in the manufacture of saltpetre.

which—perish the thought—whiskey would not exist.
Torpedo (13th century)
What it is: The first self-propelled projectile for sea warfare.
Why it matters: The Chinese invented gunpowder, but Hassan al-Rammah got the idea of stuffing it into a metal case and shooting it across water to shock and awe an enemy ship. In The Book of Fighting on Horseback and With War Engines (1280), al-Rammah dubbed it a "self-moving and combustible egg." This spiny missile would be filled with saltpeter, flammable liquid, and metal filings. Once ignited, combustion would propel the torpedo to its target, where it might explode.

From Wikipedia, the free encyclopedia
Hasan al-Rammah (Arabic: حسن الرماح, died 1295) was a Syrian Arab chemist and engineer during the Mamluk Sultanate who studied gunpowders and explosives, and sketched prototype instruments of warfare, including the first torpedo. Al-Rammah called his early torpedo "an egg which moves itself and burns." It was made of two sheet-pans of metal fastened together and filled with naphtha, metal filings, and potassium nitrate. It was intended to move across the surface of the water, propelled by a large rocket and kept on course by a small rudder.
Al-Rammah devised several new types of gunpowder and a new type of fuse and two types of lighters.

Explosive Gunpowder and the First Cannon

BY MSW | JUNE 7, 2017 | ADD A COMMENT | 10 MIN READ

LAST UPDATED: JUNE 7, 2017 4:05 PM

The pot de fer, known to the Arabs as midfa, was the ancestor of all subsequent forms of cannon. Materials evolved from bamboo to wood to iron quickly enough for the Egyptian Mamelukes to employ the weapon against the Mongols at the battle of Ain Jalut in 1260, which ended the Mongol advance into the Mediterranean world. A wooden cup on the end of the arrow trapped gas behind the projectile.

MAMLUK ENGINEER WITH MIDFA

A certain al-Hassan al-Rammah describes and illustrates the Midfa in a work of c. 1280-1290. It was clearly an early firearm, made of wood with a barrel only as deep as its muzzle width, used to fire Bunduks (?bullets) or feathered bolts. The charge filled a third of

Midfa, the Egyptian secret weapon used to defeat the Mongol army in the 13th century

Stephen Nartey | March 15, 2023

Hand-cannon being used by a soldier /Photo credit: Wikipedia

In the 12th century, there was a wave of Christian crusaders determined to convert other religions and pagan worshipers into their folds. This campaign was spearheaded by the Mongol army, which was led by the Turk, Kitbuga. Their raid started with Syria in 1259 and swept through Damascus and Aleppo till the caravan made a stopover at the Mediterranean Sea. They had plans to take over Egypt's capital, Cairo, but decided to give the rulers an option to submit or be forced into submission. The Mongol envoy sent to Mamlûk sultan, al-Muẓaffar Sayf al-Dīn Quṭuz, returned with a strong warning from the Egyptian ruler, emphasizing they were not walkovers.

Still angered by the proposal of the Mongolian army, the Mumluks, led by Qutuz, waged a military expedition against the Mongolian forces in Gaza. They fought a Mongol army of 20,000 at Ain Jalut, which is also known as Goliath's spring. The leverage the Mamluks exercised over the Mongol army was due to army General Baybars' familiarity with the terrain since his teenage years when he was once held there as a fugitive. His strategy enabled the Mamluks to subdue the Mongol forces on the battlefield, according to Britannica.

The plan was to capitalize on one of the tactics of the Mongols where they feign interest in trapping their enemies. While the Mongols followed the bait, his army hid behind trees in wait to ambush the enemy forces. When their adversaries fell for the trick, the Mamluk army attacked them from all sides, leaving them with a heavy blow of assault from a sea of arrows. Though the Mongols fought hard and viciously, the Mumluks won the battle that day.

Ahmed Hassan Zewail (February 26, 1946 – August 2, 2016) was an Egyptian and American chemist,[4] known as the "father of femtochemistry".[5] He was awarded the 1999 Nobel Prize in Chemistry for his work on femtochemistry and became the first Egyptian and Arab to win a Nobel Prize in a scientific field,[6] and the second African to win a Nobel Prize in Chemistry. He was the Linus Pauling Chair Professor of Chemistry, a professor of physics, and the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.

Early life and education [edit]

Ahmed Hassan Zewail was born on February 26, 1946, in Damanhur, Egypt, and was raised in Desouk.[8] He received Bachelor of Science and Master of Science degrees in chemistry from Alexandria University before moving to the United States to complete his PhD at the University of Pennsylvania under the supervision of Robin M. Hochstrasser.[1][7]

Career [edit]

After completing his PhD, Zewail did postdoctoral research at the University of California, Berkeley, supervised by Charles B. Harris.[1] Following this, he was awarded a faculty appointment at the California Institute of Technology in 1976, and eventually became the first Linus Pauling Chair in Chemical Physics there.[1] He became a naturalized citizen of the United States on March 5, 1982.[8] Zewail was the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.[9]

Zewail was nominated and participated in President Barack Obama's Presidential Council of Advisors on Science and Technology (PCAST), an advisory group of the nation's leading scientists and engineers to advise the President and Vice President and formulate policy in the areas of science, technology, and innovation.[10]

Research [edit]

Zewail's key work was a pioneer of femtochemistry[5][11][12]—i.e. the study of chemical reactions across femtoseconds. Using a rapid ultrafast laser technique (consisting of ultrashort laser flashes), the technique allows the description of reactions on very short time scales – short

Bringing emotional intelligence to technology with Rana el Kaliouby

Can machines finally understand what humans are feeling? Artificial intelligence pioneer Rana el Kaliouby discusses the science behind Emotion AI

THE RECENT SUCCESS IN the accurate analysis of facial expressions and measurement in emotion and engagement has paved a new direction of how we use artificial intelligence to improve the way we live and interact with each other. This shift from identification technology, such as facial recognition, to human perception AI – technology that can understand human sentiment – is the driving force behind Rana el Kaliouby's work.

Inspired by her own experience with years of long-distance communication virtually and digitally, el Kaliouby and her team at Affectiva are developing technology that can comprehend human engagement. This shift comes at an important time – political polarisation suggests that empathy is diminishing and the current COVID-19 pandemic has heightened the need for emotional context, as hundreds of millions of people find themselves physically isolated from others.

Acrobatics

Page Talk

From Simple English Wikipedia, the free encyclopedia

See the main article: Gymnastics

Acrobatics (Latin: *akrobateō* — climb upward) is usually understood as

- a kind of physical exercises;
- a kind of performing arts;
- a sport.

Acrobatics requires extraordinary balance, agility, flexibility, control, concentration and motor coordination. A person who performs acrobatics is called an acrobat. Acrobatic skills were known in ancient Egypt, Greece, Rome and China. In the 19th century, acrobatic performance became popular in circuses of Europe. In the 20th century it became an organized sport with leagues and championships.

Additional Information

In lieu of an abstract, here is a brief excerpt of the content:

T he E g yp tia n D rill a n d thezyxwvutsrqponmlkjihgfedcbaZYXWVUTSRQPO O rigin o f the C rank RICHARD S. HARTENBERG JOHN SCHM IDT, JR. The manipulation or method of operation of an Egyptian drill1—a boring tool for making large holes, as in the hollowing of stone vessels— has been the subject of much speculation, particularly in reference to the crank. Historians have either positively or diffidently assigned the first appearance of the crank to this tool of antiquity, without, however, giving explanations that ring true. Although the drill has not yet been found as an artifact, there is a wealth of evidence for its existence. It is pictured in tombs from the Third to the Twenty-sixth Dynasties; it appears frequently as a hiero glyph for either "craftsman" or "drill"; presumable cutting bits of flint have been found by the hundreds; there are hollowed vases and the like; and blocks of stone from the Third Dynasty show appropriate cavities made in the course of dressing to level. The purpose of this article is to examine the total situation, provide a modus operandi suggested by experiments made with a simulated tool, and link the principle of the ancient tool to that of a type of drill in

Gymnastics (Consecutive Vault)

This painting represents pharaonic gymnastics. The players performed consecutive vaults without touching the floor with their heads and making more than one complete turn in the air. At the end of the exercise the players stand firmly upright, which is one of the basic rules of floor exercise applied in today's Olympics

twisting their waists towards the left and right.
The fourth player stands on his head upside down in perfect equilibrium, without touching the floor with his arms. All these positions are close to some practiced in today's rhythmic gymnastics.

Tug of Hoop

This is an ancient Egyptian game in which two players compete in pulling the hoop swiftly. Each contestant fixes a hooked staff to hinder any snatch of the hoop by the other player. This game needs sharp physical maneuvers and strict observation, particularly because the hooked staff is used both to pull the hoop and support it from falling flat on the floor.

Marathon

Marathon races were of the utmost importance in ancient Egypt, particularly during celebrations marking the assumption of power of new kings. One of the rituals of these celebrations was to hold a marathon run by the king around the temples before spectators to reveal his physical strength and his ability to rule using his bodily as well as mental capabilities.

History records that the Pharaoh, together with those who were born on the same day of his birth, participated in hectic marathons. No one was allowed to have a meal before covering 180 stages of his race.

Ancient Egyptian Stone-Drilling

An Experimental Perspective on a Scholarly Disagreement

BY LEONARD GUNDLACH AND A. JOHN CARNAHEY | Originally Published in 1983 | View PDF

More than most technical procedures in the ancient world, drilling of hard stone such as quartz and granite has evoked awe and puzzlement. Neither wall paintings, nor textual information, nor excavated material has provided complete answers as to how drilling was done. As a consequence, there has been scholarly controversy. One such disagreement occurred between two eminent Egyptologists, A. Lucas and Sir Flinders Petrie. Their argument revolved around a difficult and important question, namely, how did the ancient Egyptians of the 3rd millennium B.C. drill granite?

This unresolved question, raised by Petrie as early as 1883, is important not only to Egyptologists, but to scholars of ancient lapidary technology anywhere in the world where hard stone was drilled. Here, we report on our preliminary experiments directed toward a resolution of this controversy. The reader must bear in mind that our work is based solely upon the evidence of the object examined, and does not take into account ancient Egyptian textual or material evidence that might shed light upon this problem.

The disagreement between Lucas and Petrie can be most accurately summarized by alternately juxtaposing their own words written over a 35-year period.

Lucas:

"...as neither copper nor bronze is sufficiently hard to cut such stones as basalt, diorite, granite, quartzite and schist, a harder material than the metal is required to do the work which must have been used either in the form of (fixed) cutting points (teeth) or as a loose (abrasive) powder .... In my opinion, it was a loose abrasive powder (of) finely ground quartz sand used wet ... loose quartz sand which occurs in great abundance in Egypt and will abrade quartz ... which was the hardest stone the ancient Egyptians worked."

Petrie:

Additional Information

In lieu of an abstract, here is a brief excerpt of the content:

T he E g yp tia n D rill a n d thezyxwvutsrqponmlkjihgfedcbaZYXWVUTSRQPO O rigin o f the C rank RICHARD S. HARTENBERG JOHN SCHM IDT, JR. The manipulation or method of operation of an Egyptian drill1—a boring tool for making large holes, as in the hollowing of stone vessels— has been the subject of much speculation, particularly in reference to the crank. Historians have either positively or diffidently assigned the first appearance of the crank to this tool of antiquity, without, however, giving explanations that ring true. Although the drill has not yet been found as an artifact, there is a wealth of evidence for its existence. It is pictured in tombs from the Third to the Twenty-sixth Dynasties; it appears frequently as a hiero glyph for either "craftsman" or "drill"; presumable cutting bits of flint have been found by the hundreds; there are hollowed vases and the like; and blocks of stone from the Third Dynasty show appropriate cavities made in the course of dressing to level. The purpose of this article is to examine the total situation, provide a modus operandi suggested by experiments made with a simulated tool, and link the principle of the ancient tool to that of a type of drill in

Gymnastics (Consecutive Vault)

This painting represents pharaonic gymnastics. The players performed consecutive vaults without touching the floor with their heads and making more than one complete turn in the air. At the end of the exercise the players stand firmly upright, which is one of the basic rules of floor exercise applied in today's Olympics

Ali Ramdani (born 18 April 1984), better known by his stage name Lilou, is an Algerian-French b-boy breakdancer. He is part of the French crew Pockemon Crew and the all-star team LEGION X. Since the beginning of his career in 1999, he has won many international prizes, both with his crew and as a solo dancer. He has had a black belt in Kung Fu since he was sixteen. He practices Islam and can speak Algerian Arabic, French and English.
Lilou was the winner of the b-boy competition Red Bull BC One in 2005 and 2009. He is one of the only four competitors to have won the Red Bull BC One twice, the other three being Hong 10, Victor and Menno. He also won Battle of the Year in 2003 with Pockemon Crew. In 2005, Lilou won the Chief Rocka award at the UK Bboy Championships. The following year, he was part of the Pockemon team that won the Crews competition at the UK Bboy Championships. In 2006, Lilou was featured in the game B-Boy, released by FreeStyleGames. In 2008, Lilou took part in Chemical Brothers' music video "Midnight Madness". He also appears in the film StreetDance 2. In 2012, he joined Madonna's MDNA Tour as a dancer and choreographer. In 2014, he became the winner of Undisputed. In doing so, he became the world champion b-boy in 2014. He lists Michael Jackson, Zinedine Zidane, Muhammad Ali, and Jamiroquai as influences.

Nationality	Yemeni
Date of Birth	15 December 1975
Arrival at Guantanamo	May 2003

Omar Muhammad Ali al-Rammah (YM-1017) was probably a low-level mujahidin fighter in Bosnia during the mid-1990s before becoming a facilitator for al-Qa'ida–affiliated extremists in the late 1990s. He may have trained at al-Qa'ida–associated camps in Afghanistan before relocating to Georgia in mid-2001 to support the Chechen jihad. Rammah was arrested in April 2002 in an operation in which he was to provide detonators for a remote-controlled explosive device.

trusted but low-level mujahidin facilitator while he aspired to enter Chechnya to fight. He arranged to acquire fraudulent passports; and sought to acquire weapons, ammunition, and other supplies for mujahidin operations in Chechnya." It was also claimed that he "probably received some training under Abu Atiya, who led a toxin network while in Georgia, but probably had no other involvement in its operations." Captured in April 2002 by Russian forces, he arrived at Guantánamo in May 2003 after being held in a variety of CIA "black sites" and US-run secret prisons in Afghanistan.

Moving on to his behavior in Guantánamo, the summary noted that, although he has been "moderately compliant," he "has refused to cooperate with US personnel and probably retains an extremist mindset" — again, the use of the word "probably" does not inspire confidence that this is necessarily an accurate assessment. The summary added that al-Rammah "has made no effort to reconnect with family," although this claim is contradicted by his civilian lawyer, Beth Jacob, who, in her submission to the board, posted below, explicitly states that "despite several efforts by the International Red Cross (which my firm has confirmed independently through conversations with the ICRC) and others — he has not been able to make contact with his family since his arrival at Guantánamo."

The summary also noted that al-Rammah

Bosnian Serb general to surrender

Former Bosnian Serb general Vinko Pandurevic, who is wanted by the UN war crimes tribunal in The Hague for alleged genocide during Bosnia's 1992-95 war, will surrender to the court, the Serbian government said.

Slobodan Milosevic's exit turned the tide against Serb generals

20 Mar 2005

Pandurevic announced his decision after talks earlier on Sunday in the Serbian capital with Serbian Justice Minister Zoran Stojkovic, a government statement said.

"After the talks with minister Stojkovic, General Vinko Pandurevic decided to volontarily surrender to The Hague to help his people," the statement added.

Pandurevic, who is wanted over his role in the 1995 massacre of some 8000 Muslims by Serb forces in the eastern Bosnian town of Srebrenica, will travel to The Hague on Wednesday accompanied by a Serbian government minister, according to the statement.

The general will also be accompanied by Bosnian Serb Interior Minister Darko Matijasevic, the Bosnian Serb government said.

OREGON JEWISH MUSEUM AND CENTER FOR HOLOCAUST EDUCATION

HENK PANDER, NOVEMBER 21, 1937 – APRIL 6, 2023

Henk Pander lived a long life as a pure artist, undiminished in the moral voracity and aesthetic ferocity with which he confronted the universe. His paintings are brave, plaintive and vivid, deeply personal and yet, for precisely that reason, challengingly universal. Henk embodied the best of representational realism—appropriate for an artist trained in the classical Dutch traditions of Rembrandt and Vermeer. But he was also, as an immigrant, American, and product of Portland's 1960s counterculture, a universalist driven by moral outrage. His art exemplified the power of visual art to express both historical significance and intimate emotion, a history painter who magnified and heightened historical reality through the prism of his delicate imaginative vision: Henk Pander was justifiably proud to be an heir to Rembrandt.

The Hague, 14 December 2001
CC/P.I.S./651e

The indictment against Vinko Pandurevic is unsealed.

On Friday 7 December 2001, the disclosure of the indictment against Vinko Pandurevic was ordered. The indictment was confirmed on 2 November 1998 and amended on 27 October 1999.

THE ACCUSED

Born in 1959 in Sokolac (Bosnia and Herzegovina), Vinko Pandurevic was an Infantry Captain in the Yugoslav People's Army (JNA) prior to being appointed Brigade Commander within the Bosnian Serb Army (VRS). According to the indictment, he was Commander of the "Zvornik Brigade" from 12 December 1992 through to November 1996, which was involved in the July 1995 attack on the Srebrenica "safe area" and the subsequent killing and execution of Bosnian Muslim men and boys. Vinko Pandurevic was promoted to the rank of General-Major in June 1997, and was a member of the VRS General Staff until he was relieved in April 1998.

FACTUAL ALLEGATIONS

The indictment alleges that between about 11 July 1995 and 1 November 1995, Vinko Pandurevic, "*intending to destroy a part of the Bosnian Muslim people as a national, ethnical or religious group*", killed and caused serious bodily or mental harm to members of the group. He allegedly "*planned, instigated, ordered or otherwise aided and abetted in the planning, preparation or execution*" of the "*opportunistic killings*" and "*organised mass executions*" of thousands of captured Bosnian Muslim men and boys from the Srebrenica "safe area".

According to one story, the first circus was staged by Ptolemy II Philadelphus, king of Egypt from 285 to 246 BC, who gathered animals, birds and reptiles from Africa and the Middle East and put them on parade for his people on days of celebration.

Next year, to celebrate the national circus' 20th anniversary, the Ministry of Culture is planning an international festival and will ask 35 countries to compete in a circus competition.

Why will there be no other Arabic circuses there?

In the conservative Islamic countries, the idea of a woman performing in a leotard and barelegged would be abhorrent, as would sexually integrated audiences. Security-conscious governments might also be wary of approving events that attract crowds, as a circus does. And in many other countries of this region, there is simply no tradition of humor as an art form--and little culture other than that of the desert heritage.

"The Egyptians are the only Arabs who would understand the value of laughter and having fun," said one observer.

The art of juggling has existed in various cultures throughout history. The beginning is uncertain. The first depictions were found in ancient Egypt, China, Greece, and Rome, as well as medieval and modern societies.

Ancient Egypt [edit]

The earliest record of toss juggling is a painting on the wall of Tomb 15 in Egypt's Beni Hasan cemetery complex. This tomb belonged to Baqet III, a provincial governor of Menat-Khufu (present day Minya) during the later years of the Eleventh Dynasty of Egypt.[17] It depicts female dancers and acrobats juggling up to three balls, and one of the girls juggling with her arms crossed.

In another Beni Hasan painting, four girls are playing a juggling game in which two girls throw and catch a ball while being carried on the backs of the others. Arthur Watson, in his 1907 article for *The Reliquary and Illustrated Archaeologist*, suggests that if a player dropped the ball in this game, it became that player's turn to become the bearer.[18]

This Egyptian wall painting from the wall of Tomb 15 at Beni Hasan appears to depict toss jugglers.

Brooklyn Museum associate curator Dr. Robert Bianchi suggests that the appearance of jugglers in the Beni Hassan tomb may be "an analogy between balls and circular mirrors, as round things were used to represent solar objects, birth and death."[19]

ANCIENT JUGGLING TOMBS – PART 1

September 10, 2020

(Haz clic aquí para español.)

One of the oldest representations of juggling dates from 1994 – 1781 BC, in the tombs at Beni Hasan. Due to the time that has passed and the little documentation that there is in this regard, researching before Christ juggling is a never-ending job. These investigations require deepening in disciplines such as archaeology, history, anthropology. It is not easy to unveil a new discovery about the ancient history of juggling. However, prominent juggling historians and researchers such as David Cain, Eric Åberg, Thom Wall, and others have provided us with invaluable data. All my admiration for them.

For my part, I did my homework to research some BC juggling tombs, and I was able to find some interesting things that I will share with you below.

In many articles on juggling history, the images on the tombs of Beni Hasan are discussed, saying that it was an Egyptian prince who marked his tomb with depictions of juggling. Beni Hasan is not actually a prince; it is the name of a town in Middle Egypt on the eastern bank of the Nile River where a necropolis is found, and there lie the remains of governors, monarchs and pharaohs.

For other uses, see Circassian (disambiguation).

Circassians, also called **Cherkess** or **Adyghe** (Adyghe and Kabardian: Адыгэхэр, romanized: *Adygeiher*) are an indigenous Northwest Caucasian ethnic group and a nation; native to the historical country-region of Circassia in the North Caucasus.[70] As a consequence of the Circassian genocide perpetrated by the Russian Empire in the 19th century during the Russo-Circassian War, most Circassians were exiled from their homeland in Circassia to modern-day Turkey and the rest of the Middle East, where most of them are today.[71] In the early 1990s, the Unrepresented Nations and Peoples Organization estimated that there are as many as 3.7 million Circassians in diaspora in over 50 countries.[72]

The Circassian language is the ancestral language of the Circassian people,[73] and Islam has been the dominant religion among them since the 17th century.[74] Circassia has been repeatedly invaded since ancient times; its isolated terrain coupled with the strategic value external societies have placed on the region have greatly shaped the Circassian national identity.[74]

The Circassian flag consists of a green field charged with 12 gold stars and, in the center, three crossed arrows. The stars represent the 12 historical Circassian provinces: the Abzakh, the Besleney, the Bzhedugh, the Hatuqway, the Kabardians, the Mamkhegh, the Natukhaj, the Shapsugh, the Chemirgoy, the

The earliest record of toss juggling is a painting on the wall of Tomb 15 in Egypt's Beni Hasan cemetery complex. This tomb belonged to Baqet III, a provincial governor of Menat-Khufu (present day Minya) during the later years of the Eleventh Dynasty of Egypt.[17] It depicts female dancers and acrobats juggling up to three balls, and one of the girls juggling with her arms crossed.

In another Beni Hasan painting, four girls are playing a juggling game in which two girls throw and catch a ball while being carried on the backs of the others. Arthur Watson, in his 1907 article for *The Reliquary and Illustrated Archaeologist*, suggests that if a player dropped the ball in this game, it became that player's turn to become the bearer.[18]

This Egyptian wall painting from the wall of Tomb 15 at Beni Hasan appears to depict toss jugglers.

Brooklyn Museum associate curator Dr. Robert Bianchi suggests that the appearance of jugglers in the Beni Hassan tomb may be "an analogy between balls and circular mirrors, as round things were used to represent solar objects, birth and death."[19]

ANCIENT JUGGLING TOMBS – PART 1

September 10, 2020

(Haz clic aquí para español.)

One of the oldest representations of juggling dates from 1994 – 1781 BC, in the tombs at Beni Hasan. Due to the time that has passed and the little documentation that there is in this regard, researching before Christ juggling is a never-ending job. These investigations require deepening in disciplines such as archaeology, history, anthropology. It is not easy to unveil a new discovery about the ancient history of juggling. However, prominent juggling historians and researchers such as David Cain, Eric Åberg, Thom Wall, and others have provided us with invaluable data. All my admiration for them.

For my part, I did my homework to research some BC juggling tombs, and I was able to find some interesting things that I will share with you below.

In many articles on juggling history, the images on the tombs of Beni Hasan are discussed, saying that it was an Egyptian prince who marked his tomb with depictions of juggling. Beni Hasan is not actually a prince; it is the name of a town in Middle Egypt on the eastern bank of the Nile River where a necropolis is found, and there lie the remains of governors, monarchs and pharaohs.

For other uses, see Circassian (disambiguation).

Circassians, also called **Cherkess** or **Adyghe** (Adyghe and Kabardian: Адыгэхэр, romanized: *Adygeiher*) are an indigenous Northwest Caucasian ethnic group and a nation; native to the historical country-region of Circassia in the North Caucasus.[70] As a consequence of the Circassian genocide perpetrated by the Russian Empire in the 19th century during the Russo-Circassian War, most Circassians were exiled from their homeland in Circassia to modern-day Turkey and the rest of the Middle East, where most of them are today.[71] In the early 1990s, the Unrepresented Nations and Peoples Organization estimated that there are as many as 3.7 million Circassians in diaspora in over 50 countries.[72]

The Circassian language is the ancestral language of the Circassian people,[73] and Islam has been the dominant religion among them since the 17th century.[74] Circassia has been repeatedly invaded since ancient times; its isolated terrain coupled with the strategic value external societies have placed on the region have greatly shaped the Circassian national identity.[74]

The Circassian flag consists of a green field charged with 12 gold stars and, in the center, three crossed arrows. The stars represent the 12 historical Circassian provinces: the Abzakh, the Besleney, the Bzhedugh, the Hatuqway, the Kabardians, the Mamkhegh, the Natukhaj, the Shapsugh, the Chemirgoy, the

From Wikipedia, the free encyclopedia

Italian motor manufacturer Alfa Romeo has participated multiple times in Formula One. The brand has competed in motor racing as both a constructor and engine supplier sporadically between 1950 and 1987, and later as a commercial partner between 2015 and 2023. The company's works drivers won the first two World Drivers' Championships in the pre-war Alfetta: Nino Farina in 1950 and Juan Manuel Fangio in 1951. Following these successes, Alfa Romeo withdrew from Formula One.

During the 1960s, although the company had no official presence in the top tier of motorsport, several Formula One teams used independently developed Alfa Romeo engines to power their cars. In the early 1970s, Alfa provided Formula One support for their works driver Andrea de Adamich, supplying adapted versions of their 3-litre V8 engine from the Alfa Romeo Tipo 33/3 sports car to power Adamich's McLaren (1970) and March (1971) entries. None of these engine combinations scored championship points.

Article Talk Read View source View history Tools

From Wikipedia, the free encyclopedia

Below are two tables which report the **average adult human height by country** or geographical region. With regard to the first table, original studies and sources should be consulted for details on methodology and the exact populations measured, surveyed, or considered. With regard to the second table, these estimated figures for adult human height for said countries and territories in 2019 and the declared sources may conflict with the findings of the first table.

First table: individual surveys and studies

Accuracy

As with any statistical data, the accuracy of the findings may be challenged. In this case, for the following reasons:

- Some studies may allow subjects to self-report values.[1] Generally speaking, self-reported height tends to be taller than measured height, although the overestimation of height depends on the reporting subject's height, age, gender and region.[2][3][4][5]
- Test subjects may have been invited instead of random sampling, resulting in sampling bias.
- Some countries may have significant height gaps between different regions. For instance, one survey shows there is 10.8 centimetres (4.3 in) gap between the tallest state and the shortest state in Germany.[6] Under such circumstances, the mean height may not represent the total population unless sample subjects are appropriately taken from all regions with using weighted average of the different regional groups.
- Different social groups can show different mean height. According to a study in France, executives and professionals are 2.6 centimetres (1.0 in) taller, and university students are 2.55 centimetres (1.0 in) taller than the national average.[7] As this case shows, data taken from a particular social group may not represent a total population in some countries.
- Height measurement can vary over the course of a day, due to factors such as a decrease from exercise done directly before measurement (i.e. inversely correlated), or an increase since lying down for a significant period of time (i.e. positively correlated). For example, one study revealed a mean decrease of 1.54 centimetres (0.6 in) in the heights of 100 children from getting out of bed in the morning to between 4 and 5 p.m. that same day.[8] Such factors may not have been controlled in all of the following studies.

Measured and self-reported figures

Data are representative of the majority of the adult population in the country or region.[9]

Note: Letters in grey indicate non-measured height.

Country / region	Average male height	Average female height	Stature ratio (male to female)	Sample population / age range	Share of pop. over 18 covered[9] [10][b]	Method	Year	Ref.

NASA Hyper-X Program Demonstrates Scramjet Technologies

X-43A Flight Makes Aviation History

NASA Facts

A modified Pegasus booster rocket ignites moments after release from the B-52B, beginning the acceleration of the X-43A over the Pacific Ocean in March of 2004. The X-43A vehicle is mounted on the nose of the rocket.

NASA made aviation history with the first and second successful flights of a scramjet-powered airplane at hypersonic speeds—speeds greater than Mach 5 or five times the speed of sound. Compared to a rocket-powered vehicle like the Space Shuttle, scramjet (supersonic combustion ramjet) powered vehicles promise more airplane-like operations for increased affordability, flexibility and safety for ultra high-speed flights within the atmosphere and into Earth orbit. Because they do not have to carry bulky oxygen tanks, as rockets must, vehicles powered by air-breathing scramjets can be smaller and lighter.

Researchers have worked for decades to demonstrate scramjet technologies, first in wind tunnels and computer simulations, and now in an airplane in flight. Ultimate applications include future hypersonic missiles, hypersonic airplanes, the first stage of two-stage-to-orbit reusable launch vehicles and single-stage-to-orbit reusable launch vehicles.

High-Risk, High-Payoff Program

The eight-year, approximately $230 million NASA Hyper-X program was a high-risk, high-payoff research program. It undertook challenges never before attempted. No vehicle powered by an air-breathing engine had ever flown at hypersonic speeds before the successful March 2004 flight. In addition, the rocket boost and subsequent separation from the rocket to get to the scramjet test condition had complex elements that had to work properly for mission success. Careful analyses and design were applied to reduce risks to acceptable levels; even so, some level of residual risk was inherent to the program.

The Record-Breaking Flights

INTERESTING ENGINEERING Subscribe | Sign In

Better designs for the future of hypersonic flight

In the 1960s, an improved ramjet was devised in which the burner could function supersonically. The modified **ramjet**, or **scramjet**, minimizes the losses due to the shock wave flow loss allowing the engine to produce enough thrust for hypersonic travel or speeds up to **Mach 15**.

Since the scramjet uses external air to power the combustor, it is much more efficient than a rocket, which must carry all of its oxygen on board. Scramjets are optimized for hypersonic flight and will not function at speeds below Mach 3, requiring a rocket to accelerate it up to critical engine stall speeds.

SEE ALSO: NEW AIRCRAFT TRAVELS MACH 7.5 WITH SCRAMJET ENGINE

The first successful test flight of a scramjet took place on July 30, 2002, by the University of Queensland's HyShot team and their international partners.

In 2004, NASA demonstrated it **X-43A scramjet-powered** aircraft, achieving speeds almost at **Mach 7**. Recent advancements in scramjet technology have seen the **HIFiRE 5b** jet travel at Mach 7.5. Although

Woman Who Escaped From "Children Of God" Cult Tells Her Story Of Abuse And Brainwashing

Trigger warning: child abuse, suicide

A survivor of one of the most controversial cults shared her harrowing experiences, highlighting the religious movement's exploitation of children, her advocacy against extremism, and the psychology behind cults

36-year-old Daniella Mestyanek Young detailed the abuse she suffered as a child growing up in the Children of God cult, exposing how the so-called "free love" ideals of the group promoted the sexual abuse of children.

Daniella escaped what has been labeled a "sex cult" at 15 and has since been working as a self-described "scholar of cults, extreme groups, and extremely bad leadership."

In a bombshell expose with The Sun, published on Sunday (March 10), Daniella, a daughter of high-ranking members who was shuffled between compounds in the US, Mexico, and Brazil, explained that when the cult was in its prime, it brought in hundreds of millions of dollars, adding that her grandfather — a senior leader — "still runs the money."

In 1968, former priest David Berg founded Teens for Christ, which evolved to become the infamous Children of God cult, characterized by allegations of rape, child abuse, and religious prostitution.

The Children Of God: 5 Disturbing Facts About The Pro-Pedophilia Sex Cult

The sect still exists online and reportedly has 1,500 members in 80 countries.

Kenneth Copeland, a Texas-based televangelist, was confronted by a reporter who grilled him over his fleet of private planes. The exchange, which aired last month on Inside Edition, went viral and showed Copeland justifying his luxurious spending.

Inside Edition correspondent Lisa Guerrero asked Copeland about why he won't fly commercial as he was getting in a vehicle in Branson, Missouri.

He defended it, making it seem to be a vital means to his televangelism.

He said, "If I flew commercial, I'd have to stop 65% of what I'm doing."

Guerrero questioned him about a private jet he purchased from filmmaker Tyler Perry, the Gulfstream V.

He replied, "Well, that's none of your business."

Fuzzy logic and neural network technologies
Applications of fuzzy logic technologies in NASA projects are reviewed to examine their advantages in the development of neural networks for aerospace and commercial expert systems and control. Examples of fuzzy-logic applications include a 6-DOF spacecraft controller, collision-avoidance systems, and reinforcement-learning techniques. The commercial applications examined include a fuzzy autofocusing system, an air conditioning system, and an automobile transmission application. The practical use of fuzzy logic is set in the theoretical context of artificial neural systems (ANSs) to give the background for an overview of ANS research programs at NASA. The research and application programs include the Network Execution and Training Simulator and faster training algorithms such as the Difference Optimized Training Scheme. The networks are well suited for pattern-recognition applications such as predicting sunspots, controlling posture maintenance, and conducting adaptive diagnoses.

81 To make the Heart Tender (Ar-Riqaq) كتاب الرقاق

(4) Chapter: About hope and hoping too much (4) باب فِي الأَمَلِ وَطُولِهِ

Narrated 'Abdullah:

The Prophet (ﷺ) drew a square and then drew a line in the middle of it and let it extend outside the square and then drew several small lines attached to that central line, and said, "This is the human being, and this, (the square) in his lease of life, encircles him from all sides (or has encircled him), and this (line), which is outside (the square), is his hope, and these small lines are the calamities and troubles (which may befall him), and if one misses him, another will snap (i.e. overtake) him, and if the other misses him, a third will snap (i.e. overtake) him."

Reference : Sahih al-Bukhari 6417
In-book reference : Book 81, Hadith 6
USC-MSA web (English) reference : Vol. 8, Book 76, Hadith 426
(deprecated numbering scheme)

3. Flying machine

Saint Louis, MO

"Abbas ibn Firnas was the first person to make a real attempt to construct a flying machine and fly," said Hassani. In the 9th century he designed a winged apparatus, roughly resembling a bird costume. In his most famous trial near Cordoba in Spain, Firnas flew upward for a few moments, before falling to the ground and partially breaking his back. His designs would undoubtedly have been an inspiration for famed Italian artist and inventor Leonardo da Vinci's hundreds of years later, said Hassani.

4. University

In 859 a young princess named Fatima al-Fihri founded the first degree granting university in Fez, Morocco. Her sister Miriam founded an adjacent mosque and together the complex became the al-Qarawiyyin Mosque and University. Still operating almost 1,200 years later, Hassani says he hopes the center will remind people that learning is at the core of the Islamic tradition and that the story of the al-Fihri sisters will inspire young Muslim women around the world today.

5. Algebra

The word algebra comes from the title of a Persian mathematician's famous 9th century treatise "Kitab al-Jabr Wa l-Muqabala" which translates roughly as

which—perish the thought—whiskey would not exist.

Torpedo *(13th century)*

What it is: The first self-propelled projectile for sea warfare.

Why it matters. The Chinese invented gunpowder, but Hassan al-Rammah got the idea of stuffing it into a metal case and shooting it across water to shock and awe an enemy ship. In The Book of Fighting on Horseback and With War Engines (1280), al-Rammah dubbed it a "self-moving and combustible egg." This spiny missile would be filled with saltpeter, flammable liquid, and metal filings. Once ignited, combustion would propel the torpedo to its target, where it might explode.

From Wikipedia, the free encyclopedia

Hasan al-Rammah (Arabic: حسن الرماح, died 1295) was a Syrian[1][2][3] Arab[4] chemist and engineer during the Mamluk Sultanate who studied gunpowders and explosives, and sketched prototype instruments of warfare, including the first torpedo.[5] Al-Rammah called his early torpedo "an egg which moves itself and burns." It was made of two sheet-pans of metal fastened together and filled with naphtha, metal filings, and potassium nitrate. It was intended to move across the surface of the water, propelled by a large rocket and kept on course by a small rudder.[5]

Al-Rammah devised several new types of gunpowder[6] and a new type of fuse and two types of lighters.[5]

4. Travel to Muzadalifah

After sunset, pilgrims reach Muzadalifah for Maghrib and Asr prayers. One can rest until the night before Fajr's prayers to prepare for the next morning's ritual of pelting the Devil. Pilgrims take equal sized pebbles to throw at the Devil. On the 10th day, Dhu al-Hijjah pilgrims depart for Makkah to do Tawaf al-Ifadah & Saee before sunset. They must return to Mina to perform Rami, Nahr, and Halq.

5. Perform Rami

Pilgrims are required to complete Rami or the stoning of the Devil on the 11th, 12th, and 13th days of Hajj. Seven stones of similar sizes are thrown at Jamrat al-Aqabah at noon each day. All pilgrims must depart for Makkah before sunset on 12th of Dhu al-Hijjah.

6. Perform Nahr or animal sacrifice

The stoning ceremony is only completed with animal sacrifice. Pilgrims can buy a sacrifice coupon or voucher, indicating that a sacrifice has taken place in their name. A lamb or a camel are the two options for sacrificial animals. The animal is slaughtered, and its meat is packed and given to the poor in the countries of the Middle East.

Explosive Gunpowder and the First Cannon

BY MSW | JUNE 7, 2017 | ADD A COMMENT | 10 MIN READ

LAST UPDATED: JUNE 7, 2017 4:05 PM

The pot de fer, known to the Arabs as midfa, was the ancestor of all subsequent forms of cannon. Materials evolved from bamboo to wood to iron quickly enough for the Egyptian Mamelukes to employ the weapon against the Mongols at the battle of Ain Jalut in 1260, which ended the Mongol advance into the Mediterranean world. A wooden cup on the end of the arrow trapped gas behind the projectile.

© Ian Heath 1978

MAMLUK ENGINEER WITH MIDFA

A certain al-Hassan al-Rammah describes and illustrates the Midfa in a work of c. 1280-1290. It was clearly an early firearm, made of wood with a barrel only as deep as its muzzle width, used to fire Bunduks (?bullets) or feathered bolts. The charge filled a third of

Midfa, the Egyptian secret weapon used to defeat the Mongol army in the 13th century

Stephen Nartey | March 15, 2023

Hand cannon being used by a soldier/Photo credit: Wikipedia

In the 12th century, there was a wave of Christian crusaders determined to convert other religions and pagan worshipers into their folds. This campaign was spearheaded by the Mongol army, which was led by the Turk, Kitbuga. Their raid started with Syria in 1259 and swept through Damascus and Aleppo till the caravan made a stopover at the Mediterranean Sea. They had plans to take over Egypt's capital, Cairo, but decided to give the rulers an option to submit or be forced into submission. The Mongol envoy sent to Mamlūk sultan, al-Muẓaffar Sayf al-Dīn Quṭuz, returned with a strong warning from the Egyptian ruler, emphasizing they were not walkovers.

Still angered by the proposal of the Mongolian army, the Mumluks, led by Qutuz, waged a military expedition against the Mongolian forces in Gaza. They fought a Mongol army of 20,000 at Ain Jalut, which is also known as Goliath's spring. The leverage the Mamluks exercised over the Mongol army was due to army General Baybars' familiarity with the terrain since his teenage years when he was once held there as a fugitive. His strategy enabled the Mamluks to subdue the Mongol forces on the battlefield, according to Britannica.

The plan was to capitalize on one of the tactics of the Mongols where they feign interest in trapping their enemies. While the Mongols followed the bait, his army hid behind trees in wait to ambush the enemy forces. When their adversaries fell for the trick, the Mamluk army attacked them from all sides, leaving them with a heavy blow of assault from a sea of arrows. Though the Mongols fought hard and viciously, the Mumluks won the battle that day.

America's First Jet Ace Displayed His Flying Skills in Three Wars

James Jabara stands on a F-86 Sabre in an Air Force photo from April 1953. (U.S. Air Force photo)

Military.com | By Bethanne Kelly Patrick

Listen to this article now
Powered by Trinity Audio
00:00 03:19

As a high school student, James Jabara's eyesight was so weak that he had to wear glasses. For most students, this might not rankle beyond the occasional taunt of "four eyes," but young Jabara wanted more than anything to be a pilot. To improve his eyes, he ate 20 carrots a day for "a considerable time," according to Prof. Craig Miner of Wichita State University. This literally homegrown remedy must have succeeded, because today we remember Col. James Jabara as the world's first jet-vs.-jet ace.

Jabara flew more than 100 European missions during World War II, all before he was 20. His courage was legendary, even then. Miner recounts the day when Jabara attacked a German plane, and the two craft collided in the air. The pilots floated to the ground and shook hands in recognition of each other's bravery.

From Wikipedia, the free encyclopedia

"Jabby" redirects here. For another person nicknamed "Jabby", see Gérard Crombac.

James "Jabby" Jabara (10 October 1923 – 17 November 1966) was the first American and United States Air Force jet ace.[1][2] Born in Oklahoma, he lived in Kansas where he enlisted as an aviation cadet at Fort Riley after graduating from high school. Jabara attended four flying schools in Texas before he received his pilot's wings and was commissioned as a second lieutenant. Jabara flew two tours of combat duty in Europe during World War II as a North American P-51 Mustang pilot, and scored 1.5 air victories against German aircraft.

Jabara flew his first jet aircraft in 1948, the USAF Lockheed F-80 Shooting Star before transitioning to the USAF North American F-86 Sabre. Jabara used this aircraft to shoot down multiple Soviet-built MiG-15 jets during the Korean War. He achieved his first confirmed air victory of the war on 3 April 1951. A month later he was credited with his fifth and sixth victories, making him the first American jet ace in history. He eventually scored 15 victories, giving him the title of "triple ace". Jabara was ranked as the second-highest-scoring U.S. ace of the Korean War. He received the Distinguished Service Cross, Silver Star, Distinguished Flying Cross, Air Medal, and the British Distinguished Flying Cross for his accomplishments in combat.

Jabara next held a series of commands at various Air Force bases across the United States. He flew the Lockheed F-104 Starfighter and later the Convair B-58 Hustler. In 1966, while on leave from service in Vietnam, Colonel Jabara was traveling with his family in two cars to their new home when his daughter crashed the car she was driving and he was riding in, killing them both. They were buried together at Arlington National Cemetery. In recognition of his contributions to military aviation, an airport outside of Wichita, Kansas was named in his honor. Each year the United States Air Force Academy alumni association bestows the Jabara Award upon an Academy graduate whose aerospace accomplishments demonstrate superior performance.

From Cairo to Cambridge: One scientist's quest to humanise AI

by Lisa Ardill 22 MAY 2020 SAVE ARTICLE

Scientist, entrepreneur and author Rana el Kaliouby discusses her journey from Egypt to working on emotion AI at the MIT Media Lab.

Rana el Kaliouby is co-founder and CEO of Affectiva, a Boston-based emotion-recognition tech firm that grew out of MIT's Media Lab.

Bringing emotional intelligence to technology with Rana el Kaliouby

Can machines finally understand what humans are feeling? Artificial intelligence pioneer Rana el Kaliouby discusses the science behind Emotion AI

THE RECENT SUCCESS IN the accurate analysis of facial expressions and measurement in emotion and engagement has paved a new direction of how we use artificial intelligence to improve the way we live and interact with each other. This shift from identification technology, such as facial recognition, to human perception AI – technology that can understand human sentiment – is the driving force behind Rana el Kaliouby's work.

Inspired by her own experience with years of long-distance communication virtually and digitally, el Kaliouby and her team at Affectiva are developing technology that can comprehend human engagement. This shift comes at an important time – political polarisation suggests that empathy is diminishing and the current COVID-19 pandemic has heightened the need for emotional context, as hundreds of millions of people find themselves physically isolated from others.

Ancient Gymnastics History

Posted on December 9, 2010 by Gymnastics Zone in Articles

There is little to no direct knowledge available about the earliest times of man's gymnastics activities. There is no doubt among historians that people performed gymnastics and gymnastics-related activities like tumbling, jumping, swinging movements and group acrobatics early in the history of mankind in a number of areas around the world.

The History of Sport, Exercise and Physical Fitness

Gymnastics is one of the world's oldest physical activities and sports and its roots can be traced back thousands of years. There is evidence of early forms of gymnastics in the ancient civilizations in the Middle East and Asia. Gymnastics, in the form of acrobatics, calisthenics, precision drills and disciplined exercise has been around since ancient times.

7000 Years and Counting

Gymnastics was most likely first depicted in Egyptians artifacts. The earliest known physical evidence of gymnastics can be found in the art of ancient Egypt, where female acrobats performed for the Pharaohs and the Egyptian nobility. Acrobats entertained Egyptian nobility around 7,000 years ago judging by ancient frescoes. Many of these drawings have been dated and authenticated as far back as 5000 BC. These Egyptian hieroglyphs depict such gymnastics activities as backbend variations and partner stunts.

No Bull Vaulting

Beginning about 2,700 BC, acrobats would vault over the backs of bulls on the island of Crete when the Minoan civilization flourished. This is recorded in a well-known fresco from Crete at the palace at Knossos. It depicts a vaulter performing what is either a cartwheel or handspring over a charging bull.

No Warm-Ups and No Practice Vaults

The art of bull leaping as developed in Minoan Crete was performed by both men and women. The athlete would run toward a charging bull, grab its horns, and when tossed into the air, would execute various aerial movements, landing on the bull's

Who Invented Acrobatics?

While it's impossible to know exactly who invented acrobatics, the Ancient Egyptians are widely thought to be the first people to record it through their captivating art and literature.

Acrobatics has emerged from traditions all around the world, and we have proof of it that comes from many thousands of years ago. Depictions of female acrobatic dancers performing feats like backbends and other acrobatic moves have been discovered at ancient sites.

Image credit: Ancient.eu

For example, one compelling Ancient Egyptian (image above), remaining on a 19th Dynasty fresco dating as far back as 1297-1185 BC, shows a young woman contorted into the familiar bridge pose that is still practiced today by many acrobats, dancers, and yogis.

What Do Acrobats Do in a Circus?

About Acrobatic Gymnastics

Acrobatic Gymnastics – a balancing act

Practised by both men and women, Acrobatic Gymnastics is amongst the oldest known sports practiced by the ancient Egyptians. The name comes from the Greek word 'acrobateo', meaning to rise or go forth.

Acrobatic Gymnastics is a modern and artistic discipline, which requires an extraordinary amount of courage and trust amongst gymnasts.

Acrobatic routines are choreographed to music and presented on a 12 X 12 metre sprung floor surface, Acrobatic Gymnastics is full of expression and provides gymnasts with a stage on which to shine.

In official competitions, Acrobatic Gymnastics offers five

Ali Ramdani (born 18 April 1984), better known by his stage name Lilou, is an Algerian-French b-boy breakdancer. He is part of the French crew Pockemon Crew and the all-star team LEGION X. Since the beginning of his career in 1999, he has won many international prizes, both with his crew and as a solo dancer. He has had a black belt in Kung Fu since he was sixteen. He practices Islam and can speak Algerian Arabic, French and English.
Lilou was the winner of the b-boy competition Red Bull BC One in 2005 and 2009. He is one of the only four competitors to have won the Red Bull BC One twice, the other three being Hong 10, Victor and Menno. He also won Battle of the Year in 2003 with Pockemon Crew. In 2005, Lilou won the Chief Rocka award at the UK Bboy Championships. The following year, he was part of the Pockemon team that won the Crews competition at the UK Bboy Championships. In 2006, Lilou was featured in the game B-Boy, released by FreeStyleGames. In 2008, Lilou took part in Chemical Brothers' music video "Midnight Madness". He also appears in the film StreetDance 2. In 2012, he joined Madonna's MDNA Tour as a dancer and choreographer. In 2014, he became the winner of Undisputed. In doing so, he became the world champion b-boy in 2014. He lists Michael Jackson, Zinedine Zidane, Muhammad Ali, and Jamiroquai as influences.

Bosnian Serb general to surrender

Former Bosnian Serb general Vinko Pandurevic, who is wanted by the UN war crimes tribunal in The Hague for alleged genocide during Bosnia's 1992-95 war, will surrender to the court, the Serbian government said.

Slobodan Milosevic's exit turned the tide against Serb generals

20 Mar 2005

Pandurevic announced his decision after talks earlier on Sunday in the Serbian capital with Serbian Justice Minister Zoran Stojkovic, a government statement said.

"After the talks with minister Stojkovic, General Vinko Pandurevic decided to volontarily surrender to The Hague to help his people," the statement added.

Pandurevic, who is wanted over his role in the 1995 massacre of some 8000 Muslims by Serb forces in the eastern Bosnian town of Srebrenica, will travel to The Hague on Wednesday accompanied by a Serbian government minister, according to the statement.

The general will also be accompanied by Bosnian Serb Interior Minister Darko Matijasevic, the Bosnian Serb government said.

OREGON JEWISH MUSEUM AND CENTER FOR HOLOCAUST EDUCATION

HENK PANDER, NOVEMBER 21, 1937 – APRIL 6, 2023

Henk Pander lived a long life as a pure artist, undiminished in the moral voracity and aesthetic ferocity with which he confronted the universe. His paintings are brave, plaintive and vivid, deeply personal and yet, for precisely that reason, challengingly universal. Henk embodied the best of representational realism—appropriate for an artist trained in the classical Dutch traditions of Rembrandt and Vermeer. But he was also, as an immigrant, American, and product of Portland's 1960s counterculture, a universalist driven by moral outrage. His art exemplified the power of visual art to express both historical significance and intimate emotion, a history painter who magnified and heightened historical reality through the prism of his delicate imaginative vision: Henk Pander was justifiably proud to be an heir to Rembrandt.

The indictment against Vinko Pandurevic is unsealed.

Press Release

CHAMBERS

(Exclusively for the use of the media. Not an official document)

The Hague, 14 December 2001
CC/P.I.S./651e

The indictment against Vinko Pandurevic is unsealed.

On Fricay 7 December 2001, the disclosure of the indictment against Vinko Pandurevic was ordered. The indictment was confirmed on 2 November 1998 and amended on 27 October 1999.

THE ACCUSED

Born in 1959 in Sokolac (Bosnia and Herzegovina), Vinko Pandurevic was an Infantry Captain in the Yugoslav People's Army (JNA) prior to being appointed Brigade Commander within the Bosnian Serb Army (VRS). According to the indictment, he was Commander of the "Zvornik Brigade" from 12 December 1992 through to November 1996, which was involved in the July 1995 attack on the Srebrenica "safe area" and the subsequent killing and execution of Bosnian Muslim men and boys. Vinko Pandurevic was promoted to the rank of General-Major in June 1997, and was a member of the VRS General Staff until he was relieved in April 1998.

FACTUAL ALLEGATIONS

The indictment alleges that between about 11 July 1995 and 1 November 1995, Vinko Pandurevic, "*intending to destroy a part of the Bosnian Muslim people as a national, ethnical or religious group*", killed and caused serious bodily or mental harm to members of the group. He allegedly "*planned, instigated, ordered or otherwise aided and abetted in the planning, preparation or execution*" of the "*opportunistic killings*" and "*organised mass executions*" of thousands of captured Bosnian Muslim men and boys from the Srebrenica "safe area".

5. Developments in Surgery

HEART SPECIALIST DR. MICHAEL DEBAKEY, C. 1994

Born in Lake Charles, Louisiana in 1908 to Lebanese immigrants, Michael DeBakey (the Anglicized form of *Debaghi*) grew up spending time in his father's pharmacy and enjoyed sewing, gardening and learning how motors and other machinery work. He earned his medical degree in 1932 and served in the Surgical Consultants Division of the Army Surgeon General's Office from 1942 to 1946.

It was during this time that DeBakey and his colleagues developed special units dedicated to providing surgical care to soldiers wounded near the front lines. They were first deployed in 1943, though are best known for their work during the Korean and Vietnam conflicts, when they were known as the Mobile Auxiliary Surgical Hospital (MASH) units.

DeBakey's surgical contributions continued for the next several decades and included performing the first successful removal of a blockage of the carotid artery (1953), developing the concept behind coronary bypass surgery (1963), pioneering the field of telemedicine with the first demonstration of open-heart surgery transmitted overseas via satellite (1965), and being the first to use a partial artificial heart (1966).

TOPSPEED
Highest Mileage Ram Truck In The World In 2024
Surpassing the one million-mile milestone is already an astounding feat for a truck owner, but crossing the two million-mile mark is next-level stuff.
SUMMARY
RAM trucks are gaining ground against competitors like Toyota, showcasing remarkable feats of durability and reliability in the long run.
Cummins engines play a key role in achieving high-mileage benchmarks, as showcased by RAM truck owners surpassing a million miles.
Regular maintenance, dedicated mechanics like Forest Cunningham, and the trust in the 5.9-liter Cummins engine contribute to the longevity of RAM trucks.
Tough this smart can only be called F-150?

TAMPA, Fla. (WFLA) – A former Massachusetts resident who built a dungeon inside his home and plotted to torture and eat children has asked a judge to order his release from prison because he is at high risk of contracting the coronavirus.
Boston 25 reports Geoffrey Portway filed a motion for compassionate release, citing the more than 40 cases of coronavirus in his prison.
In a handwritten letter, Portway said he was at higher risk of becoming infected because he is obese and asked
sent back to England, where he is from.

PRESS RELEASE
Man Admits Transporting Child Pornography, Fleeing St. Louis
Wednesday, August 9, 2023
Share
For Immediate Release
U.S. Attorney's Office, Eastern District of Missouri
ST. LOUIS – A man from St. Louis on Wednesday admitted possessing and sharing child pornography and fleeing from St. Louis while on house arrest.
Daniel Bert, 38, pleaded guilty to a felony charge of transportation of child pornography. He admitted that after receiving two tips about Bert, the FBI discovered he was discussing his sexual interest in young children on Kik Messenger. An undercover FBI special agent began communicating with Bert on another app, Wickr, and Bert sent a picture of his genitals to the agent. He also expressed his sexual interest in young children, his plea agreement says. In text messages, Bert told the agent that he had a hard drive full of child pornography. On the same day that agents obtained a search warrant for Bert's home, Bert asked the undercover agent to join him in an online video chat during which Bert played videos containing child pornography.

David Berg

Article Talk

From Wikipedia, the free encyclopedia

This article is about the cult leader. For other people with the same name, see David B (disambiguation).

David Brandt Berg (February 18, 1919 – October 1, 1994), also known as **King David**, **Mo**, **Moses David**, **Father David**, **Dad**, or **Grandpa** to followers, was the founder and leader of the cult generally known as the Children of God[1] and subsequently as The Family International. Berg's group, founded in 1968 among the counterculture youth in Southern California, gained notoriety for incorporating sexuality into its spiritual message and recruitment methods. Berg and his organization were accused of a broad range of sexual misconduct, including child sexual abuse.

Life [edit]

Family heritage [edit]

Berg's maternal grandfather was John Lincoln Brandt (1860–1946), a Disciples of Christ minister, author, and lecturer of Muskogee, Oklahoma.[2] Brandt had a dramatic conversion in his mid-twenties and immediately entered full-time Christian service. For years he was a Methodist circuit rider. He later became a leader of the Alexander Campbell movement of the Disciples of Christ, a restoration movement that developed into the current Protestant denomination Christian Church (Disciples of Christ).[3]

Early years (1919–1969) [edit]

Berg was born on February 18, 1919, in Oakland, California.[4] During his early years, he u lived in or around Florida.[5]

He was the youngest of three children born to Hjalmar Emmanuel Berg and Virginia Lee B Christian evangelists.[6] His father was Swedish.[7]

Virginia and Hjalmar were expelled from the Disciples of Christ after publicly testifying of h healing, which was contrary to church doctrine. They subsequently joined a new denomina Christian and Missionary Alliance, shortly before David's birth. In later years, their missiona and disdain for denominational politicking often set them at variance with the conservative that church's hierarchy, causing them to work largely as independent pastors and evangeli

Berg spent his early years traveling with his parents, who pursued their evangelical missio they settled in Miami, Florida, after Virginia successfully led a series of large revivals at the

Trigger warning: child abuse, suicide

A survivor of one of the most controversial cults shared her harrowing experiences, highlighting the religious movement's exploitation of children, her advocacy against extremism, and the psychology behind cults

36-year-old Daniella Mestyanek Young detailed the abuse she suffered as a child growing up in the Children of God cult, exposing how the so-called "free love" ideals of the group promoted the sexual abuse of children.

Daniella escaped what has been labeled a "sex cult" at 15 and has since been working as a self-described "scholar of cults, extreme groups, and extremely bad leadership."

In a bombshell exposé with The Sun, published on Sunday (March 10), Daniella, a daughter of high-ranking members who was shuffled between compounds in the US, Mexico, and Brazil, explained that when the cult was in its prime, it brought in hundreds of millions of dollars, adding that her grandfather — a senior leader — "still runs the money."

In 1968, former priest David Berg founded Teens for Christ, which evolved to become the infamous Children of God cult, characterized by allegations of rape, child abuse, and religious prostitution.

The Children Of God: 5 Disturbing Facts About The Pro-Pedophilia Sex Cult

The sect still exists online and reportedly has 1,500 members in 80 countries.

August 24, 2021

Members of the Children of God cult (via Discovery, Inc.)

By: Aaron Rasmussen

David Brandt Berg, a charismatic preacher, formed The Children of God in 1968. He believed the apocalypse was near and urged believers to survive on basic necessities by giving up their money and personal possessions to the group's leaders. He also infamously taught that God is love and love is sex.

In 1974, a New York attorney general's office report labeled The Children of God a cult, and its members were accused of sexual abuse, assault, incest and other crimes. The Guardian reported:

In one instance, the report stated, "a 14-year-old runaway who spent nine days at a COG commune testified that she was raped and because of her refusal to cooperate with the elders, was held in solitary confinement on no less than three separate occasions."

Despite the accusations, The Children of God continued to flourish for decades. Berg changed the cult's name to The Family of Love following the 1978 Jonestown mass suicide, and, in 2004, the group became known as The Family International.

Ahead are five other facts about the cult that imploded just over 40 years after it

Kenneth Copeland, a Texas-based televangelist, was confronted by a reporter who grilled him over his fleet of private planes. The exchange, which aired last month on Inside Edition, went viral and showed Copeland justifying his luxurious spending.

Inside Edition correspondent Lisa Guerrero asked Copeland about why he won't fly commercial as he was getting in a vehicle in Branson, Missouri.

He defended it, making it seem to be a vital means to his televangelism.

He said, "If I flew commercial, I'd have to stop 65% of what I'm doing."

Guerrero questioned him about a private jet he purchased from filmmaker Tyler Perry, the Gulfstream V.

He replied, "Well, that's none of your business."

TULSA, Okla. (AP) — The Department of Justice announced a settlement Wednesday with Oral Roberts University, saying the evangelical school will pay more than $300,000 to resolve whistleblower allegations that it broke federal law in the way it compensated a recruiting company.

Federal prosecutors said the university in Tulsa paid recruiter Joined Inc. with a share of tuition from students who enrolled, in violation of incentive compensation law on admissions and recruitment.

The university admits no wrongdoing in paying the settlement and denies the allegations.

J Inc. co-owner Maurice Shoe will receive $45,000 through a provision of the law that allows

Early life and career

Azerbaijan

Zadeh was born in Baku, Azerbaijan SSR,[18] as **Lotfi Aliaskerzadeh**.[19] His father was Rahim Aleskerzade, an Iranian Muslim Azerbaijani[20] journalist from Ardabil on assignment from Iran, and his mother was Fanya (Feyga[21]) Korenman, a Jewish pediatrician from Odesa, Ukraine, who was an Iranian citizen.[22][23][24][25] The Soviet government at this time courted foreign correspondents, and the family lived well while in Baku.[26] Zadeh attended elementary school for three years there,[26] which he said "had a significant and long-lasting influence on my thinking and my way of looking at things."[27]

Iran

In 1931, when Stalin began agricultural collectivization,[21] and Zadeh was ten, his father moved his family back to Tehran, Iran. Zadeh was enrolled in Alborz High School, a missionary school,[21] where he was educated for the next eight years, and where he met his future wife,[26] Fay (Faina[21]) Zadeh, who said that he was "deeply influenced" by the "extremely decent, fine, honest and helpful" Presbyterian missionaries from the United States who ran the college. "To me they represented the best that you could find in the United States – people from the Midwest with strong

Fuzzy logic and neural network technologies

Applications of fuzzy logic technologies in NASA projects are reviewed to examine their advantages in the development of neural networks for aerospace and commercial expert systems and control. Examples of fuzzy-logic applications include a 6-DOF spacecraft controller, collision-avoidance systems, and reinforcement-learning techniques. The commercial applications examined include a fuzzy autofocusing system, an air conditioning system, and an automobile transmission application. The practical use of fuzzy logic is set in the theoretical context of artificial neural systems (ANSs) to give the background for an overview of ANS research programs at NASA. The research and application programs include the Network Execution and Training Simulator and faster training algorithms such as the Difference Optimized Training Scheme. The networks are well suited for pattern-recognition applications such as predicting sunspots, controlling posture maintenance, and conducting adaptive diagnoses.

Neuro-fuzzy

5 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

This article **may need to be rewritten** to comply with Wikipedia's quality standards. You can help. The talk page may contain suggestions. *(May 2010)*

In the field of artificial intelligence, the designation **neuro-fuzzy** refers to combinations of artificial neural networks and fuzzy logic.

Sketch of a neuro-fuzzy system implementing a simple Sugeno-Takagi controller.[1]

Overview [edit]

Neuro-fuzzy hybridization results in a hybrid intelligent system that combines the human-like reasoning style of fuzzy systems with the learning and connectionist structure of neural networks. Neuro-fuzzy hybridization is widely termed as fuzzy neural network (FNN) or neuro-fuzzy system (NFS) in the literature. Neuro-fuzzy system (the more popular term is used henceforth) incorporates the human-like reasoning style of fuzzy systems through the use of fuzzy sets and a linguistic model consisting of a set of IF-THEN fuzzy rules. The main strength of neuro-fuzzy systems is that they are universal approximators with the ability to solicit interpretable IF-THEN rules.

The strength of neuro-fuzzy systems involves two contradictory requirements in fuzzy modeling: interpretability versus accuracy. In practice, one of the two properties prevails. The neuro-fuzzy in fuzzy modeling research field is divided into two areas: linguistic fuzzy modeling that is focused on interpretability, mainly the Mamdani model; and precise fuzzy modeling that is focused on accuracy, mainly the Takagi-Sugeno-Kang (TSK) model.

Although generally assumed to be the realization of a fuzzy system through connectionist networks, this term is also used to describe some other configurations including:

- Deriving fuzzy rules from trained RBF networks.
- Fuzzy logic based tuning of neural network training parameters.
- Fuzzy logic criteria for increasing a network size.
- Realising fuzzy membership function through clustering algorithms in unsupervised learning in SOMs and neural networks.
- Representing fuzzification, fuzzy inference and defuzzification through multi-layers feed-forward connectionist networks.

It must be pointed out that interpretability of the Mamdani-type neuro-fuzzy systems can be lost. To improve the interpretability of neuro-fuzzy systems, certain measures must be taken, wherein important aspects of interpretability of neuro-fuzzy systems are also discussed.[2]

A recent research line addresses the data stream mining case, where neuro-fuzzy systems are sequentially updated with new incoming samples on demand and on-the-fly. Thereby, system updates not only include a recursive adaptation of model parameters, but also a dynamic evolution and pruning of model components (neurons, rules), in order to handle concept drift and dynamically changing system behavior adequately and to keep the systems/models "up-to-date" anytime. Comprehensive surveys of various evolving neuro-fuzzy systems approaches can be found in [3] and [4].

Pseudo outer-product based fuzzy neural networks [edit]

Pseudo outer product-based fuzzy neural networks (**POPFNN**) are a family of neuro-fuzzy systems that are based on the linguistic fuzzy model.[5]

Three members of POPFNN exist in the literature:

- **POPFNN-AARS(S)**, which is based on the Approximate Analogical Reasoning Scheme[6]
- **POPFNN-CRI(S)**, which is based on commonly accepted fuzzy Compositional Rule of Inference[7]

Old Rebellions, New Minorities: Na Family Leaders and Debates Over Communal Representation Following the Xinhai Rebellion, 1911
ABSTRACT

Ma clique

From Wikipedia, the free encyclopedia

The Ma clique or Ma family warlords is a collective name for a group of Hui (Muslim Chinese) warlords in Northwestern China who ruled the Chinese provinces of Qinghai, Gansu and Ningxia for 10 years from 1919 until 1928. Following the collapse of the Qing dynasty in 1912, the region came under Chinese Muslim warlord Ma Qi's control until the Northern Expedition by the Republic of China consolidated central control in 1928. There were three families in the Ma clique ("Ma" being a common Hui rendering of the common Muslim name "Muhammad"), each of them respectively controlled, parts of Gansu, Ningxia and Qinghai. The three most prominent members of the clique were Ma Bufang, Ma Hongkui, and Ma Hongbin, collectively known as the **Xibei San Ma** (Chinese: 西北三馬, *Three Ma of the Northwest*). Some contemporary accounts, such as Edgar Snow's, described the clique as the "Four Ma" (rather than Three), adding Ma Bufang's brother Ma Buqing to the list of the top warlords. Other prominent Ma's included Ma Anliang, Ma Qi, Ma Lin, Ma Hu-shan, and Ma Zhongying.

Ma Clique

The Ma Clique warlords were all generals in the military of the Republic of China, who controlled most of Mainland China until it was overtaken by the communist People's Liberation Army. The clique was begun by Muslim generals who served in the military of the Qing dynasty, most notably in the Kansu Braves army, who fought in the Boxer Rebellion against invading foreign forces. It was continued by two generations of their descendants.

After the Xinhai Revolution overthrew the Qing, the Ma Clique Generals declared their allegiance to the Republic of China. Unlike the Mongols, Hui Muslims refused to secede from the Republic, and Ma Qi quickly used his diplomatic and military powers to make the Tibetan and Mongol nobles recognize the Republic of China government as their overlord, and sent a message to President Yuan Shikai reaffirming that Qinghai was securely in the Republic. He replaced "Long, Long, Long, Live the reigning Emperor", with "Long live the Republic of China" on inscriptions. Ma Anliang also agreed to join the new Republic of China government.

When the Kuomintang seized power in the Northern Expedition, the Ma Clique warlords became members of the Kuomintang party, and their armies were renamed as divisions of the National Revolutionary Army. The Ma Clique Ninghai Army under General Ma Qi was renamed the National Revolutionary Army 26th Division.

ABSTRACT

Following the 1911 Xinhai Rebellion, the new leadership began to stress the fundamental unity of the peoples of the new Republic of China, even as newspaper commentaries foretold the need for separate Muslim representation as the only way to buy the participation of that constituency in the new state. Influential Chinese Muslim military leaders controlled much of the northwest; their participation in the new state was crucial to its survival. However, whilst the legacies of a nineteenth century process of minoritization meant it was often

From Wikipedia, the free encyclopedia

Rajeev Motwani (Hindi: राजीव मोटवानी , 24 March 1962 – 5 June 2009) was an Indian American professor of Computer Science at Stanford University whose research focused on theoretical computer science. He was a special advisor to Sequoia Capital. He was a winner of the Gödel Prize in 2001.[1][2][3]

Education [edit]

Rajeev Motwani was born in Jammu, Jammu and Kashmir, India on 24 March 1962, and grew up in New Delhi.[4] His father was in the Indian Army. He had two brothers. As a child, inspired by luminaries like Gauss, he wanted to become a mathematician. Motwani went to St Columba's School, New Delhi. He completed his B.Tech. in Computer Science from the Indian Institute of Technology Kanpur in Kanpur, Uttar Pradesh in 1983 and got his Ph.D. in Computer Science from the University of California, Berkeley in Berkeley, California, United States in 1988, under the supervision of Richard M. Karp.[5]

Career [edit]

Motwani joined Stanford soon after U.C. Berkeley. He founded the Mining Data at Stanford project (MIDAS), an umbrella organization for several groups looking into new and innovative data management concepts. His research included data privacy, web search, robotics, and computational drug design. He is also one of the originators of the Locality-sensitive hashing algorithm.

Motwani was one of the co-authors (with Larry Page and Sergey Brin, and Terry Winograd) of an influential early paper on the PageRank algorithm. He also co-authored another seminal search paper *What Can You Do With A Web in Your Pocket* with those same authors.[6] PageRank was the basis for search techniques of Google (founded by Page and Brin), and Motwani advised or taught many of Google's developers and researchers,[7] including the first employee, Craig Silverstein.[8]

He was an author of two widely used theoretical computer science textbooks: *Randomized Algorithms* with Prabhakar Raghavan[9] and *Introduction to Automata Theory, Languages, and Computation* with John Hopcroft and Jeffrey Ullman.[10]

He was an avid angel investor and helped fund a number of startups to emerge from Stanford. He sat on boards including Google, Kaboodle, Minosa Systems (acquired by Iron Mountain Incorporated), Adchemy, Baynote, Vuclip, NeoPath Networks (acquired by Cisco Systems in 2007), Tapulous and Stanford Student Enterprises. He was active in the Business Association of Stanford Entrepreneurial Students (BASES).[11][12][13]

He was a winner of the Gödel Prize in 2001 for his work on the PCP theorem and its applications to hardness of approximation.[14][15]

The Early Google Papers: Rajeev Motwani's Contributions To Search

Michael Arrington

@arringtonTechcrunch / 4:26 PM CDT • June 6, 2009

Comment

What can you do with a Web in your Pocket?

Sergey Brin[1] Rajeev Motwani[2] Lawrence Page[3] Terry Winograd[4]

Larry Page and Sergey Brin have always given Professor Rajeev Motwani significant credit for helping them create what would eventually become Google. Today, as I say my personal goodbye to the man who helped so many people in our community, I'm also spending some time going back and reading some of the early papers that Rajeev co-authored describing how PageRank could become the basis for a new kind of search engine.

In a 1998 paper called *"What Can You Do With A Web In Your Pocket"* Brin, Motwani, Page and Terry Winograd say *"...we have developed a global ranking of Web pages called PageRank based on the link structure of the Web that has properties that are useful for search and navigation. we have used PageRank to develop a novel search engine called Google, which also makes heavy use of anchor text."*

An even earlier paper in 1998 that the four co-authored called *"The PageRank Citation Ranking: Bringing Order to the Web"* went into much more detail on PageRank. *"In this paper, we take advantage of the link structure of the Web to produce a global 'importance' ranking of every web page. This ranking, called PageRank, helps search*

Randomized Algorithms 1st Edition

by Rajeev Motwani (Author), Prabhakar Raghavan (Author)

4.5 ★★★★½ 33 ratings

See all formats and editions

For many applications, a randomized algorithm is either the simplest or the fastest algorithm available, and sometimes both. This book introduces the basic concepts in the design and analysis of randomized algorithms. The first part of the text presents basic tools such as probability theory and probabilistic analysis that are frequently used in algorithmic applications. Algorithmic examples are also given to illustrate the use of each tool in a concrete setting. In the second part of the book, each chapter focuses on an important area to which randomized algorithms can be applied, providing a comprehensive and representative selection of the algorithms that might be used in each of these areas. Although written primarily as a text for

ALEXANDRIA, Va. (AP) — A civilian contractor went to work as an interrogator at Iraq's infamous Abu Ghraib prison resigned within two weeks of his arrival and told his corporate bosses that mistreatment of detainees was likely to continue.

Jurors saw the October 2003 email from Rich Arant, who worked for military contractor CACI, during testimony Wednesday in a lawsuit filed by three Abu Ghraib survivors. The former prisoners are suing CACI, alleging that the Reston-Virginia based company shares responsibility for the mistreatment they endured.

CACI had a contract to supply interrogators to the Army after the 2003 invasion of Iraq, and scrambled to supply the needed personnel. The first CACI interrogators arrived at Abu Ghraib on Sept. 28 of that year.

Arant sent his resignation letter to CACI on Oct. 14. He informed his bosses about

BALLSTON SPA, N.Y. (AP) — A man was sentenced Wednesday to 47 years to life in prison for kidnapping and sexually assaulting a 9-year-old girl who went missing from a state park in upstate New York last year.

Craig N. Ross Jr. pleaded guilty in February to taking the girl in September from a campground at Moreau Lake State Park, a rural area about 35 miles (60 kilometers) north of Albany. The disappearance sparked a 48-hour-search that ended when she was found alive at a camper Ross was staying in.

15 charged in Newark heroin distribution organization

Thursday, November 19, 2015

wabc

NEWARK, N.J. (WABC) -- Fifteen people were charged Thursday for their roles in a heroin distribution organization in Newark.

According to U.S. Attorney Paul J. Fishman, the group operated out of a building on Johnson Avenue. It sold millions worth of the drug.

Almalik Anderson and Quawee Jones, who are accused of being the leaders of the operation, are charged with engaging in a continuing criminal enterprise.

All 15 defendants are charged with one count each of

PRESS RELEASE

Leader Of Notorious Newark Heroin Distribution Ring Sentenced To 14 Years In Prison On Drug Conspiracy Charges

Wednesday, June 27, 2018

Share

For Immediate Release

U.S. Attorney's Office, District of New Jersey

NEWARK, N.J. –An Essex County, New Jersey, man was sentenced today to 168 months in prison for his leadership role in a massive drug distribution ring responsible for selling millions of dollars' worth of heroin out of a residential building near a high school in Newark, U.S. Attorney Craig Carpenito announced.

Quawee Jones, a/k/a "Hatman," 34, of Newark, previously pleaded guilty before U.S. District Judge Jose L. Linares to a superseding information charging him with conspiracy to distribute heroin. Judge Linares imposed the sentence today in Newark federal court

According to documents filed in the case and statements made in court:

Jones and his co-defendants operated a heroin distribution marketplace out of the first floor hallway of a residential building at 25 Johnson Avenue in Newark. The building is just a few doors away from the Malcolm X. Shabazz High School and the Terrell James Park playground. The conspiracy was led by Quawee Jones and Almalik Anderson, who, along with other heroin dealers that worked with them, took advantage of the building's location on a dead-end street, making it difficult for law enforcement to infiltrate the distribution network despite a constant stream of buyers entering the building at all hours of the day.

"Lookouts" were paid by the defendants to alert them to any police activity coming

Water-raising machines [edit]

Al-Jazari invented five machines for raising water,[1] as well as watermills and water wheels with cams on their axle used to operate automata,[34] in the 12th and 13th centuries, and described them in 1206. It was in these water-raising machines that he introduced his most important ideas and components.

al-Jazari's hydropowered saqiya chain pump device.

Saqiya chain pumps [edit]

The first known use of a crankshaft in a chain pump was in one of al-Jazari's saqiya machines. The concept of minimizing intermittent working is also first implied in one of al-Jazari's *saqiya* chain pumps, which was for the purpose of maximising the efficiency of the saqiya chain pump. Al-Jazari also constructed a water-raising saqiya chain pump which was run by hydropower rather than manual labour, though the Chinese were also using hydropower for chain pumps prior to him. Saqiya machines like the ones he described have been supplying water in Damascus since the 13th century up until modern times,[35] and were in everyday use throughout the medieval Islamic world.[36] Interestingly, the depiction of the chain in al-Jazari's pump appears to be in the form of a Möbius strip, from long before the Möbius strip was first identified as an object of study in mathematics.[37]

Double-action suction pump with valves and reciprocating piston motion [edit]

Citing the Byzantine siphon used for discharging Greek fire as an inspiration,[38] al-Jazari went on to describe his version of suction pipes, suction pump, double-action pump, and made early uses of valves and a crankshaft-connecting rod mechanism, when he developed a twin-cylinder reciprocating piston suction pump. This pump is driven by a water wheel, which drives, through a system of gears, an oscillating slot-rod to which the rods of two pistons are attached. The pistons work in horizontally opposed cylinders, each provided with valve-operated suction and delivery pipes. The delivery pipes are joined above the centre of the machine to form a single outlet into the irrigation system. This water-raising machine had a direct significance for the development of modern engineering. This pump is remarkable for three reasons:[9][39][40][41]

- The first known use of a true suction pipe (which sucks fluids into a partial vacuum) in a pump.
- The first application of the double-acting principle.
- The conversion of rotary to reciprocating motion via the crank-connecting rod mechanism.

Al-Jazari's suction piston pump could lift 13.6 metres of water,[*citation needed*] with the help of delivery pipes. It was not, however, any more efficient than the noria commonly used by the Muslim world at the time.[42]

Water supply system [edit]

al-Jazari developed the earliest water supply system to be driven by gears and hydropower, which was built in 13th century Damascus to supply water to its mosques and Bimaristan hospitals. The system had water from a lake turn a scoop-wheel and a system of gears which transported jars of water up to

which—perish the thought—whiskey would not exist.

Torpedo *(13th century)*

What it is: The first self-propelled projectile for sea warfare.

Why it matters: The Chinese invented gunpowder, but Hassan al-Rammah got the idea of stuffing it into a metal case and shooting it across water to shock and awe an enemy ship. In The Book of Fighting on Horseback and With War Engines (1280), al-Rammah dubbed it a "self-moving and combustible egg." This spiny missile would be filled with saltpeter, flammable liquid, and metal filings. Once ignited, combustion would propel the torpedo to its target, where it might explode.

From Wikipedia, the free encyclopedia

Hasan al-Rammah (Arabic: حسن الرماح, died 1295) was a Syrian[1][2][3] Arab[4] chemist and engineer during the Mamluk Sultanate who studied gunpowders and explosives, and sketched prototype instruments of warfare, including the first torpedo.[5] Al-Rammah called his early torpedo "an egg which moves itself and burns." It was made of two sheet-pans of metal fastened together and filled with naphtha, metal filings, and potassium nitrate. It was intended to move across the surface of the water, propelled by a large rocket and kept on course by a small rudder.[6]

Al-Rammah devised several new types of gunpowder[7] and a new type of fuse and two types of lighters.[8]

which—perish the thought—whiskey would not exist.

Torpedo *(13th century)*

What it is: The first self-propelled projectile for sea warfare.

Why it matters: The Chinese invented gunpowder, but Hassan al-Rammah got the idea of stuffing it into a metal case and shooting it across water to shock and awe an enemy ship. In The Book of Fighting on Horseback and With War Engines (1280), al-Rammah dubbed it a "self-moving and combustible egg." This spiny missile would be filled with saltpeter, flammable liquid, and metal filings. Once ignited, combustion would propel the torpedo to its target, where it might explode.

Article | Talk | Tools

From Wikipedia, the free encyclopedia

Hasan al-Rammah (Arabic: حسن الرماح, died 1295) was a Syrian[1][2][3] Arab[4] chemist and engineer during the Mamluk Sultanate who studied gunpowders and explosives, and sketched prototype instruments of warfare, including the first torpedo.[5] Al-Rammah called his early torpedo "an egg which moves itself and burns." It was made of two sheet-pans of metal fastened together and filled with naphtha, metal filings, and potassium nitrate. It was intended to move across the surface of the water, propelled by a large rocket and kept on course by a small rudder.[6]

Al-Rammah devised several new types of gunpowder[7] and a new type of fuse and two types of lighters.[8]

JOKER
As Joker streams in the UK, Sean Alexander considers his Jewish origins.
DC Comics, like its rival Marvel, has long been acknowledged for its rich Jewish heritage in terms of the creation of its most iconic characters. While Batman himself was the co-creation of Jews Bob Kane and Bill Finger, it was another Jew – Jerry Robinson – who first introduced the Caped Crusader's most arch nemesis, the Joker.

With Todd Phillips' origin story of Joker from last year now showing on Sky Cinema and Now TV, it would seem an appropriate time to explore in greater depth the enhanced Jewish aspects this latest film adaptation has yielded.
Director Phillips is himself Jewish, born Todd Bunzl, as is Joaquin Phoenix who portrays the title role. One of the clown colleagues of protagonist Arthur Fleck (Phoenix), Randall is played by the Jewish actor Glenn Fleshler.
Arthur Fleck lives in Gotham City, 'aka New York, circa 1981', and hence is basically Jewish. He resides, with his mother, in, what J. Hoberman called, 'a slum tenement on a grim street that's recognizably the Bronx. (Given his family name, he and his mother might be the last remnants of a once-Jewish neighborhood.)'
Fleck's surname itself has origins in the Ashkenazi word for 'spot' or 'patch'. Note how the German phrase 'gelber fleck' was the street slang for the yellow Star of David that the Nazis forced Jews to wear. Fleck is a suitable surname given how
Sean Alexander is a PhD Candidate at Bangor University, exploring Jewishness and Judaism in the films of David Cronenberg.

The pot de fer, known to the Arabs as midfa, was the ancestor of all subsequent forms of cannon. Materials evolved from bamboo to wood to iron quickly enough for the Egyptian Mamelukes to employ the weapon against the Mongols at the battle of Ain Jalut in 1260, which ended the Mongol advance into the Mediterranean world. A wooden cup on the end of the arrow trapped gas behind the projectile.

© Ian Heath 1978

MAMLUK ENGINEER WITH MIDFA

A certain al-Hassan al-Rammah describes and illustrates the Midfa in a work of c. 1280-1290. It was clearly an early firearm, made of wood with a barrel only as deep as its muzzle width, used to fire Bunduks (?bullets) or feathered bolts. The charge filled a third of

Midfa, the Egyptian secret weapon used to defeat the Mongol army in the 13th century

Stephen Nartey | March 15, 2023

Hand cannon being used by a soldier/Photo credit: Wikipedia

In the 12th century, there was a wave of Christian crusaders determined to convert other religions and pagan worshipers into their folds. This campaign was spearheaded by the Mongol army, which was led by the Turk, Kitbuga. Their raid started with Syria in 1259 and swept through Damascus and Aleppo till the caravan made a stopover at the Mediterranean Sea. They had plans to take over Egypt's capital, Cairo, but decided to give the rulers an option to submit or be forced into submission. The Mongol envoy sent to Mamlūk sultan, al-Muẓaffar Sayf al-Dīn Quṭuz, returned with a strong warning from the Egyptian ruler, emphasizing they were not walkovers.

Still angered by the proposal of the Mongolian army, the Mumluks, led by Qutuz, waged a military expedition against the Mongolian forces in Gaza. They fought a Mongol army of 20,000 at Ain Jalut, which is also known as Goliath's spring. The leverage the Mamluks exercised over the Mongol army was due to army General Baybars' familiarity with the terrain since his teenage years when he was once held there as a fugitive. His strategy enabled the Mamluks to subdue the Mongol forces on the battlefield, according to Britannica.

The plan was to capitalize on one of the tactics of the Mongols where they feign interest in trapping their enemies. While the Mongols followed the bait, his army hid behind trees in wait to ambush the enemy forces. When their adversaries fell for the trick, the Mamluk army attacked them from all sides, leaving them with a heavy blow of assault from a sea of arrows. Though the Mongols fought hard and viciously, the Mumluks won the battle that day.

How Ramjets Work

By: Nicholas Gerbis | Updated: Apr 16, 2024

NASA engineer Laura O'Connor inspects a supersonic ramjet (scramjet) engine model at Langley Research Center in Hampton, Virginia.
© CORBIS

Key Takeaways

- A ramjet is a type of air-breathing jet engine that operates on the principle of compressing incoming air without the need for rotating parts.
- It relies on the high-speed forward motion of the aircraft to compress air, making it suitable for supersonic and hypersonic flight.

Guinness Recognizes NASA's X-43A Scramjet Speed Record

NASA

JUN 05, 2013

RELEASE

It's official. The new world speed record for a jet-powered aircraft, set by NASA in November, has been officially recognized by Guinness World Records.
The accomplishment, the third and final flight in the experimental X-43A project, demonstrated that an advanced form of air-breathing (jet) engine could power an aircraft at nearly 10 times the speed of sound. Data from the unpiloted, 12-foot-long research vehicle show that its revolutionary "scamjet" engine worked successfully at Mach 9.6 or nearly 7,000 mph, as it flew at about 109,000 feet over the Pacific Ocean west of California.
The flight was the culmination of NASA's Hyper-X Program, a

WIRED
Bringing emotional intelligence to technology with Rana el Kaliouby
Can machines finally understand what humans are feeling? Artificial intelligence pioneer Rana el Kaliouby discusses the science behind Emotion AI
THE RECENT SUCCESS IN the accurate analysis of facial expressions and measurement in emotion and engagement has paved a new direction of how we use artificial intelligence to improve the way we live and interact with each other. This shift from identification technology, such as facial recognition, to human perception AI – technology that can understand human sentiment – is the driving force behind Rana el Kaliouby's work.
Inspired by her own experience with years of long-distance communication virtually and digitally, el Kaliouby and her team at Affectiva are developing technology that can comprehend human engagement. This shift comes at an important time – political polarisation suggests that empathy is diminishing and the current COVID-19 pandemic has heightened the need for emotional context, as hundreds of millions of people find themselves physically isolated from others.
New Salesforce Research
"Technology has a lot of cognitive intelligence, but no emotional intelligence – which is a problem for not only how we interface with technologies but, more importantly how we connect and communicate with one another."
In this punchy virtual briefing hosted by Greg Williams, Editor of WIRED with Rana el Kaliouby, co-founder and

Research: Arab Inventors Make the U.S. More Innovative

by Sami Mahroum, Georg Zahradnik, and Bernhard Dachs

February 23, 2017

Post | Post | Share | Save | Buy Copies | Print

From Hassan Kamel Al-Sabbah, a Lebanese-born American serial inventor, to Ahmed Zewail, the 1999 Nobel laureate in chemistry, to Farouk El-Baz, a NASA and MIT scientist who helped plan the Apollo landing, to Elias A. Zerhouni, the 15th director of the National Institutes of Health, Arab immigrants have made major contributions to American science and technology.

As the Trump administration attempts to limit immigration from several Arab states, these contributions deserve extra attention. The problem is that to date there has been little work to document the extent of Arab contributions to American innovation. We recently set out to remedy that, and our analysis suggests that Arab inventors play a major role in U.S. innovation. They also contribute significantly to the success of major U.S. tech companies.

To shed more light on Arab contributions to the U.S. innovation system, we ran an exercise matching Arabic first names with international patent applications filed under the Patent Cooperation Treaty (PCT). This data includes patents by people residing in the U.S. and around the world. Our approach has been used before, in a study of ethnic innovation in the U.S. as well as in a study of female inventors.

There are obvious shortcomings to this approach. For instance, many non-Arab Muslims have Arabic first names, such as Mohammad, Ali, or Omar, while some Arabs have non-Arabic names. We tried to mitigate

circuitry to make early designs for electric cars. Again, his early designs have become extremely prescient for the modern age, where electric cars are being turned to as a replacement for fueling cars with petrol. Al-Sabbah experimented on his own car to try and crack practically powering a car with solar energy which is an incredibly early attempt at something which is today the focus of huge companies like Tesla.

Arc-Welding

In heavy industries such as the development of wind farms, ships, tanks, turbos, and other heavy-duty building, arc-welding is crucial. Al-Sabbah developed a rectifying system which was absolutely vital to the development of the arc welding machine. This is a really important development where-by welding for huge pieces of metal that are required for heavy industries is facilitated by, what turns out to be something of an obsession of Al-Sabbah, the use of electricity to heat up the metal to the required temperature to weld it effectively to the other parts of the heavy items. This proved to be really important during the Second World War, where industrial developers used Al-Sabbah's techniques to develop the requisite welding techniques for the extreme mass development of vehicles and turbos that powered the respective war efforts.

Television

To make a departure from the heavy, industry-oriented worlds of space travel and heavy instrument arc-welding, Al-Sabbah's developments and patents, 5 of them to be specific, made a huge impact on the world of televisions and screens in general. In fact, so impactful were his patents that when the, now ubiquitous, LCD (liquid crystal display) screens were introduced they were created directly out of patents that belonged to Al-Sabbah. His impact on televisual transmission directly led to the creation of military LCDs which are in aircraft, designed to display information in super high detail. It all comes back to his developments on the cathode ray tube, a field in which two of the patents sat specifically. His screens have huge numbers of pixels which allowed for a far greater color detail than the normal black and green filters. It is proposed that without Al-Sabbah, modern television wouldn't exist.

6 Groundbreaking Innovations by Arab Americans

Americans born in or with ancestral ties to Arab-speaking countries have made countless significant scientific, medical and engineering contributions.

BY: ELIZABETH YUKO
UPDATED: MARCH 26, 2024 | ORIGINAL: MARCH 31, 2022

copy page link | PRINT PAGE

While Americans born in or with ancestral ties to Arab countries have made countless significant scientific, medical and engineering contributions, most have never made it into record books. From cryptography, to the artificial heart, to the iPod, here are a few examples of some of the major advancements by Arab Americans.

1. Television Transmission and LCD Screens

Born in Nabatieh, Lebanon in 1895, Hassan Kamel Al-Sabbah studied and then taught mathematics at the American University of Beirut before immigrating to the United States in 1921. After a brief stint studying at the Massachusetts Institute of Technology (MIT), Al-Sabbah earned a master's degree in engineering sciences from the University of Illinois, says Lujine Nasralla, communications specialist at the Arab American National Museum in Dearborn, Michigan.

"In 1923, General Electric (GE) hired him to work in its Engineering Laboratory under a contract that awarded him a dollar for each of his patents," Nasralla explains, noting that between 1927 and 1935, he applied for patents for 52 of his inventions while working at GE. Some of the patents Al-Sabbah was awarded during his time at GE include three for innovations in television transmission technology (granted between 1928 and 1930), and two for cathode ray tubes (1935).

Though Al-Sabbah died in a car accident 1935, GE engineers continued to rely on the technology he invented, including developing the liquid crystal display (LCD) based on one of his patents. Al-Sabbah made numerous other significant contributions to science, technology and engineering, especially in the field of solar energy.

Ali Ramdani (born 18 April 1984), better known by his stage name Lilou, is an Algerian-French b-boy breakdancer. He is part of the French crew Pockemon Crew and the all-star team LEGION X. Since the beginning of his career in 1999, he has won many international prizes, both with his crew and as a solo dancer. He has had a black belt in Kung Fu since he was sixteen. He practices Islam and can speak Algerian Arabic, French and English.
Lilou was the winner of the b-boy competition Red Bull BC One in 2005 and 2009. He is one of the only four competitors to have won the Red Bull BC One twice, the other three being Hong 10, Victor and Menno. He also won Battle of the Year in 2003 with Pockemon Crew. In 2005, Lilou won the Chief Rocka award at the UK Bboy Championships. The following year, he was part of the Pockemon team that won the Crews competition at the UK Bboy Championships. In 2008, Lilou was featured in the game B-Boy, released by FreeStyleGames. In 2008, Lilou took part in Chemical Brothers' music video "Midnight Madness". He also appears in the film StreetDance 2. In 2012, he joined Madonna's MDNA Tour as a dancer and choreographer. In 2014, he became the winner of Undisputed. In doing so, he became the world champion b-boy in 2014. He lists Michael Jackson, Zinedine Zidane, Muhammad Ali, and Jamiroquai as influences.

LATIN AMERICAN HISTORY
Capoeira: From Slave Combat Game to Global Martial Art
Matthias Röhrig Assunção
https://doi.org/10.1093/acrefore/9780199366439.013.293
Published online: 25 February 2019
Summary
Capoeira is a martial art that developed from combat games enslaved Africans brought to Brazil. It is systematically documented since the beginning of the 19th century in Rio de Janeiro and later in other port cities. During the 19th century capoeira was increasingly practiced by the poor free people, black and of mixed ancestry, and also by white immigrants. Capoeira gangs controlled their territories against intruders and allied with political parties until the Republican purge of 1890. Capoeira survived best in Bahia, where it remained more associated with other forms of Afro-Brazilian culture and acquired many of its features still extant in present-day capoeira. From the 1930s onward, capoeira masters such as Bimba and Pastinha modernized capoeira, leading to the emergence of the Regional and Angola styles. Bahian capoeiristas migrated to Rio de Janeiro and São Paulo in search of better opportunities during the 1950–1970s. There they and their students developed what later became known as "Contemporary capoeira" (Capoeira Contemporânea) which is the most practiced style today. Capoeira was and is practiced in various ways: as a friendly game or as a fight, as a combat sport, or as an Afro-Brazilian cultural activity. Since the 1980s, capoeira has undergone a process of globalization and is now practiced in many countries around the world. Capoeira is the only martial art of the African Diaspora that is known and practiced worldwide. Writing on Capoeira has rapidly grown in a number of disciplines, leading to the constitution of its own interdisciplinary field of study.

This time, the end product was the iPhone, which essentially allowed people to carry a highly compact computer with internet capability around at all times, and, in the process, changing the way people access information. Fadell was involved with developing the first three generations of the iPhone.

5. Developments in Surgery

HEART SPECIALIST DR. MICHAEL DEBAKEY, C. 1994.

Born in Lake Charles, Louisiana in 1908 to Lebanese immigrants, Michael DeBakey (the Anglicized form of *Debaghi*) grew up spending time in his father's pharmacy and enjoyed sewing, gardening and learning how motors and other machinery work. He earned his medical degree in 1932 and served in the Surgical Consultants Division of the Army Surgeon General's Office from 1942 to 1946.

It was during this time that DeBakey and his colleagues developed special units dedicated to providing surgical care to soldiers wounded near the front lines. They were first deployed in 1943, though are best known for their work during the Korean and Vietnam conflicts, when they were known as the Mobile Auxiliary Surgical Hospital (MASH) units.

DeBakey's surgical contributions continued for the next several decades and included performing the first successful removal of a blockage of the carotid artery (1953), developing the concept behind coronary bypass surgery (1963), pioneering the field of telemedicine with the first demonstration of open-heart surgery transmitted overseas via satellite (1965), and being the first to use a partial artificial heart (1966).

A West Tampa cigar factory is for sale

The Samuel I. Davis Cigar Factory was built in 1910.

By Paul Guzzo Times staff

Published May 19, 2022

TAMPA — Construction crews estimated that the Samuel I. Davis Cigar Factory's brick work was an hour from completion when a fire gutted the tower sitting atop the 50,000-square-foot structure in 1910.

But the damage was repaired, and the three-story factory at 900 N. Howard Ave. was finished later that year.

From Wikipedia, the free encyclopedia
Below are two tables which report the average adult human height by country or geographical region. With regard to the first table, original studies and sources should be consulted for details on methodology and the exact populations measured, surveyed, or considered. With regard to the second table, these estimated figures for adult human height for said countries and territories in 2019 and the declared sources may conflict with the findings of the first table.
First table: individual surveys and studies
Accuracy
As with any statistical data, the accuracy of the findings may be challenged. In this case, for the following reasons:
Measured and self-reported figures
Data are representative of the majority of the adult population in the country or region.
Note: Letters in grey indicate non-measured height.

When Egyptian siblings Mohamed and Huda Shehata broke five combined Guinness world records this week, they were excited at the prospect of some relief from the grinding poverty of their daily lives.

Egyptian siblings claim five records including largest feet and hands

By Hassan Ibrahim | Published 16 June 2021

Advertisements

Share

In a world of 8 billion people, it can be hard to stand out from the crowd.

It sometimes takes persistence or creativity to get your hands on a Guinness World Records certificate that recognises your achievement.

However, some people are born with their talents and features and achieve recognition thanks to their incredible human form.

This is the case for siblings Mohamed and Huda Shehata (both Egypt).

Meet the Texas teen with the world's longest legs

A. Pawlowski
Updated October 19, 2020 · 4 min read

Maci Currin was in elementary school when her doctors predicted she'd grow up to be 6 feet, 4 inches tall as an adult. She shot past that estimate in 7th grade.

Now a high school senior and standing 6 feet, 10 inches tall, Currin has been recognized by Guinness World Records as being both the woman and the teen with the world's longest legs. They make up 60% of her total height.

TAMPA, Fla. (WFLA) – A former Massachusetts resident who built a dungeon inside his home and plotted to torture and eat children has asked a judge to order his release from prison because he is at high risk of contracting the coronavirus.

Boston 25 reports Geoffrey Portway filed a motion for compassionate release, citing the more than 40 cases of coronavirus in his prison.

In a handwritten letter, Portway said he was at higher risk of becoming infected because he is obese and asked to be sent back to England, where he is from.

THE RAPES IN BOSNIA: A MUSLIM SCHOOLGIRL'S ACCOUNT

By Peter Maass

December 26, 1992 at 7:00 p.m. EST

Share · Save

ZENICA, BOSNIA -- Before the local Serb warlord took Mersiha away from her apartment to rape her on June 9, he told her not to cry. Mersiha, a Muslim schoolgirl, would be safe with him.

Then, Mersiha, 17, said in a lengthy interview here, the Serb ordered her, her 15-year-old sister and an 18-year-old friend into a car and drove them to a motel in their home town of Visegrad. The notorious Bosnian Serb White Eagle militia had just seized Visegrad, and Mersiha sensed in a terrifying instant that the victors were going to treat women as spoils of war.

Serb Gang-Rapes in Kosovo Exposed

Commanding officers bear criminal responsibility for a pattern of gang-rapes by Serbian and Yugoslav forces in Kosovo during the NATO bombing campaign, Human Rights Watch said in a report *Federal Republic Of Yugoslavia*
Kosovo: Rape as a weapon of "ethnic cleaning".

Human Rights Watch documented 96 cases of rape by Serbian and Yugoslav forces against Kosovar Albanian women immediately before and during the 1999 bombing campaign, and believes that many more incidents of rape have gone unreported.

Kenneth Copeland, a Texas-based televangelist, was confronted by a reporter who grilled him over his fleet of private planes. The exchange, which aired last month on Inside Edition, went viral and showed Copeland justifying his luxurious spending.

Inside Edition correspondent Lisa Guerrero asked Copeland about why he won't fly commercial as he was getting in a vehicle in Branson, Missouri.

He defended it, making it seem to be a vital means to his televangelism.

He said, "If I flew commercial, I'd have to stop 65% of what I'm doing."

Guerrero questioned him about a private jet he purchased from filmmaker Tyler Perry, the Gulfstream V.

He replied, "Well, that's none of your business."

Oral Roberts University pays $300K in recruiting settlement

Updated 3:22 PM CDT, June 5, 2019

Share

TULSA, Okla. (AP) — The Department of Justice announced a settlement Wednesday with Oral Roberts University, saying the evangelical school will pay more than $300,000 to resolve whistleblower allegations that it broke federal law in the way it compensated a recruiting company.

Federal prosecutors said the university in Tulsa paid recruiter Joined Inc. with a share of tuition from students who enrolled, in violation of incentive compensation law on admissions and recruitment.

The university admits no wrongdoing in paying the settlement and denies the allegations.

Joined Inc. co-owner Maurice Shoe will receive $45,000 through a provision of the law that allows

Fuzzy logic and neural network technologies
Applications of fuzzy logic technologies in NASA projects are reviewed to examine their advantages in the development of neural networks for aerospace and commercial expert systems and control. Examples of fuzzy-logic applications include a 6-DOF spacecraft controller, collision-avoidance systems, and reinforcement-learning techniques. The commercial applications examined include a fuzzy autofocusing system, an air conditioning system, and an automobile transmission application. The practical use of fuzzy logic is set in the theoretical context of artificial neural systems (ANSs) to give the background for an overview of ANS research programs at NASA. The research and application programs include the Network Execution and Training Simulator and faster training algorithms such as the Difference Optimized Training Scheme. The networks are well suited for pattern-recognition applications such as predicting sunspots, controlling posture maintenance, and conducting adaptive diagnoses.

Lotfi A. Zadeh

Lotfi Aliasker Zadeh[3] (/ˈzɑ deɪ/; Azerbaijani: Lütfi Rahim oğlu Əliəsgərzadə,[6] Persian: لطفی علی‌عسکرزاده;[3] 4 February 1921 – 6 September 2017)[12][13] was a mathematician, computer scientist, electrical engineer, artificial intelligence researcher, and professor[7] of computer science at the University of California, Berkeley. Zadeh is best known for proposing fuzzy mathematics, consisting of several fuzzy-related concepts: fuzzy sets,[8] fuzzy logic,[9] fuzzy algorithms,[10] fuzzy semantics,[11] fuzzy languages,[12] fuzzy control,[13] fuzzy systems,[14] fuzzy probabilities,[15] fuzzy events,[16] and fuzzy information.[18] Zadeh was a founding member of the Eurasian Academy.[1][17]

Early life and career

Azerbaijan

Zadeh was born in Baku, Azerbaijan SSR,[18] as Lotfi Aliaskerzadeh.[19] His father was Rahim Aleskerzade, an Iranian Muslim Azerbaijani[20] journalist from Ardabil on assignment from Iran, and his mother was Fanya (Feyga[21]) Korenman, a Jewish pediatrician from Odesa, Ukraine, who was an Iranian citizen.[22][23][24][25] The Soviet government at this time courted foreign correspondents, and the family lived well while in Baku.[26] Zadeh attended elementary school for three years there,[26] which he said "had a significant and long-lasting influence on my thinking and my way of looking at things."[27]

Iran

In 1931, when Stalin began agricultural collectivization,[21] and Zadeh was ten, his father moved his family back to Tehran, Iran. Zadeh was enrolled in Alborz High School, a missionary school,[21] where he was educated for the next eight years, and where he met his future wife,[26] Fay (Faina[21]) Zadeh, who said that he was "deeply influenced" by the "extremely decent, fine, honest and helpful" Presbyterian missionaries from the United States who ran the college. "To me they represented the best that you could find in the United States – people from the Midwest with strong

In the field of artificial intelligence, the designation neuro-fuzzy refers to combinations of artificial neural networks and fuzzy logic.

Sketch of a neuro-fuzzy system implementing a simple Sugeno-Takagi controller.[1]

Overview [edit]

Neuro-fuzzy hybridization results in a hybrid intelligent system that combines the human-like reasoning style of fuzzy systems with the learning and connectionist structure of neural networks. Neuro-fuzzy hybridization is widely termed as fuzzy neural network (FNN) or neuro-fuzzy system (NFS) in the literature. Neuro-fuzzy system (the more popular term is used henceforth) incorporates the human-like reasoning style of fuzzy systems through the use of fuzzy sets and a linguistic model consisting of a set of IF-THEN fuzzy rules. The main strength of neuro-fuzzy systems is that they are universal approximators with the ability to solicit interpretable IF-THEN rules.

The strength of neuro-fuzzy systems involves two contradictory requirements in fuzzy modeling: interpretability versus accuracy. In practice, one of the two properties prevails. The neuro-fuzzy in fuzzy modeling research field is divided into two areas: linguistic fuzzy modeling that is focused on interpretability, mainly the Mamdani model; and precise fuzzy modeling that is focused on accuracy, mainly the Takagi-Sugeno-Kang (TSK) model.

Although generally assumed to be the realization of a fuzzy system through connectionist networks, this term is also used to describe some other configurations including:

- Deriving fuzzy rules from trained RBF networks.
- Fuzzy logic based tuning of neural network training parameters.
- Fuzzy logic criteria for increasing a network size.
- Realising fuzzy membership function through clustering algorithms in unsupervised learning in SOMs and neural networks.
- Representing fuzzification, fuzzy inference and defuzzification through multi-layers feed-forward connectionist networks.

It must be pointed out that interpretability of the Mamdani-type neuro-fuzzy systems can be lost. To improve the interpretability of neuro-fuzzy systems, certain measures must be taken, wherein important aspects of interpretability of neuro-fuzzy systems are also discussed.[2]

A recent research line addresses the data stream mining case, where neuro-fuzzy systems are sequentially updated with new incoming samples on demand and on-the-fly. Thereby, system updates not only include a recursive adaptation of model parameters, but also a dynamic evolution and pruning of model components (neurons, rules), in order to handle concept drift and dynamically changing system behavior adequately and to keep the systems/models "up-to-date" anytime. Comprehensive surveys of various evolving neuro-fuzzy systems approaches can be found in [3] and [4]

Pseudo outer-product based fuzzy neural networks [edit]

Pseudo outer product-based fuzzy neural networks (POPFNN) are a family of neuro-fuzzy systems that are based on the linguistic fuzzy model.[5]

Three members of POPFNN exist in the literature:

- POPFNN-AARS(S), which is based on the Approximate Analogical Reasoning Scheme[6]
- POPFNN-CRI(S), which is based on commonly accepted fuzzy Compositional Rule of Inference[7]

Old Rebellions, New Minorities: Ma Family Leaders and Debates Over Communal Representation Following the Xinhai Rebellion, 1911

Hannah Theaker

ABSTRACT

Following the 1911 Xinhai Rebellion, the new leadership began to stress the fundamental unity of the peoples of the new Republic of China, even as newspaper commentaries foretold the need for separate Muslim representation as the only way to buy the participation of that constituency in the new state. Influential Chinese Muslim military leaders controlled much of the northwest; their participation in the new state was crucial to its survival. However, whilst the legacies of a nineteenth century process of minoritisation meant it was often

BALLSTON SPA, N.Y. (AP) — A man was sentenced Wednesday to 47 years to life in prison for kidnapping and sexually assaulting a 9-year-old girl who went missing from a state park in upstate New York last year.

Craig N. Ross Jr. pleaded guilty in February to taking the girl in September from a campground at Moreau Lake State Park, a rural area about 35 miles (60 kilometers) north of Albany. The disappearance sparked a 48-hour-search that ended when she was found alive at a camper Ross was staying in.

ALEXANDRIA, Va. (AP) — A civilian contractor sent to work as an interrogator at Iraq's infamous Abu Ghraib prison resigned within two weeks of his arrival and told his corporate bosses that mistreatment of detainees was likely to continue.

Jurors saw the October 2003 email from Rich Arant, who worked for military contractor CACI, during testimony Wednesday in a lawsuit filed by three Abu Ghraib survivors. The former prisoners are suing CACI, alleging that the Reston-Virginia based company shares responsibility for the mistreatment they endured.

CACI had a contract to supply interrogators to the Army after the 2003 invasion of Iraq, and scrambled to supply the needed personnel. The first CACI interrogators arrived at Abu Ghraib on Sept. 28 of that year.

Arant sent his resignation letter to CACI on Oct. 14. He informed his bosses about

itself. This great Muslim physicist also discovered the camera obscura phenomenon, which explains how the eye sees images upright due to the connection between the optic nerve and the brain.

7. Music

Muslim musicians have had a profound impact on Europe, dating back to Charlemagne tried to compete with the music of Baghdad and Cordoba, according to Hassani. Among many instruments that arrived in Europe through the Middle East are the lute and the rahab, an ancestor of the violin. Modern musical scales are also said to derive from the Arabic alphabet.

8. Toothbrush

According to Hassani, the Prophet Mohammed popularized the use of the first toothbrush in around 600. Using a twig from the Meswak tree, he cleaned his teeth and freshened his breath. Substances similar to Meswak are used in modern toothpaste.

9. The crank

Many of the basics of modern automatics were first put to use in the Muslim world, including the revolutionary crank-connecting rod system. By converting rotary motion to linear motion, the crank enables the lifting of heavy objects with relative ease. This technology, discovered by Al-Jazari in the 12th century, exploded across the globe, leading to everything from the bicycle to the internal combustion engine.

10. Hospitals

"Hospitals as we know them today, with wards and teaching centers, come from 9th century Egypt," explained Hassani. The first such medical center was the Ahmad ibn Tulun Hospital, founded in 872 in Cairo. Tulun hospital provided free care for anyone who needed it – a policy based on the Muslim tradition of caring for all who are sick. From Cairo, such hospitals spread around the Muslim world.

CNN World Watch Listen Live TV Sign in

3. Flying machine

"Abbas ibn Firnas was the first person to make a real attempt to construct a flying machine and fly," said Hassani. In the 9th century he designed a winged apparatus, roughly resembling a bird costume. In his most famous trial near Cordoba in Spain, Firnas flew upward for a few moments, before falling to the ground and partially breaking his back. His designs would undoubtedly have been an inspiration for famed Italian artist and inventor Leonardo da Vinci's hundreds of years later, said Hassani.

4. University

In 859 a young princess named Fatima al-Firhi founded the first degree-granting university in Fez, Morocco. Her sister Miriam founded an adjacent mosque and together the complex became the al-Qarawiyyin Mosque and University. Still operating almost 1,200 years later, Hassani says he hopes the center will remind people that learning is at the core of the Islamic tradition and that the story of the al-Firhi sisters will inspire young Muslim women around the world today.

5. Algebra

The word algebra comes from the title of a Persian mathematician's famous 9th century treatise "Kitab al-Jabr Wa l-Mugabala" which translates roughly as

Modern surgery has benefited from Muslim surgeon Al Zahwari's inventions. Around the year 1,000, he reportedly performed the first caesarean operation and created the first pair of forceps. Philippe Huguen/AFP/Getty Images

Editor's Note: This story was originally published on January 29, 2010.

London (CNN) — Think of the origins of that staple of modern life, the cup of coffee, and Italy often springs to mind.

But in fact, Yemen is where the ubiquitous brew has its true origins.

Along with the first university, and even the toothbrush, it is among surprising Muslim inventions that have shaped the world we live in today.

The origins of these fundamental ideas and objects – the basis of everything from the bicycle to musical scales – are the focus of "1001 Inventions," a book celebrating "the forgotten" history of 1,000 years of Muslim heritage.

"There's a hole in our knowledge, we leap frog from the Renaissance to the Greeks," professor Salim al-Hassani, Chairman of the Foundation for Science, Technology and Civilisation, and editor of the book told CNN.

"1001 Inventions" is now an exhibition at London's Science Museum. Hassani hopes the exhibition will highlight the contributions of non-Western cultures – like the Muslim empire that once covered Spain and Portugal, Southern Italy and stretched as far as parts of China – to present day civilization.

Here Hassani shares his top 10 outstanding Muslim inventions:

1. Surgery

Around the year 1,000, the celebrated doctor Al Zahrawi published a 1,500 page illustrated encyclopedia of surgery that was used in Europe as a medical reference for the next 500 years. Among his many inventions, Zahrawi discovered the use of dissolving cat gut to stitch wounds – beforehand a second surgery had to be performed to remove sutures. He also reportedly performed the first caesarean operation and created the first pair of forceps.

2. Coffee

4. Travel to Muzadalifah

After sunset, pilgrims reach Muzadalifah for Maghrib and Asr prayers. One can rest until the night before Fajr's prayers to prepare for the next morning's ritual of pelting the Devil. Pilgrims take equal sized pebbles to throw at the Devil. On the 10th day, Dhu al-Hijjah pilgrims depart for Makkah to do Tawaf al-Ifadah & Saee before sunset. They must return to Mina to perform Rami, Nahr, and Halq.

5. Perform Rami

Pilgrims are required to complete Rami or the stoning of the Devil on the 11th, 12th, and 13th days of Hajj. Seven stones of similar sizes are thrown at Jamrat al-Aqabah at noon each day. All pilgrims must depart for Makkah before sunset on 12th of Dhu al-Hijjah.

6. Perform Nahr or animal sacrifice

The stoning ceremony is only completed with animal sacrifice. Pilgrims can buy a sacrifice coupon or voucher, indicating that a sacrifice has taken place in their name. A lamb or a camel are the two options for sacrificial animals. The animal is slaughtered, and its meat is packed and given to the poor in the countries of the Middle East.

CHEMISTRY

Chemistry Pioneer Ahmed Zewail Dies

The scientist won a Nobel Prize for using ultrafast lasers to reveal chemical reactions

By Emma Stoye, ChemistryWorld on August 3, 2016

Egyptian–US chemist Ahmed Zewail, the 'father of femtochemistry' who received the chemistry Nobel prize in 1999 for his work using ultrafast lasers to study chemical reactions, has died aged 70.

Born in Damanhour, Egypt, in 1946, Zewail gained his bachelor's and master's degrees at the University of Alexandria before moving to the US where he studied for a PhD at

From Wikipedia, the free encyclopedia

Ahmed Hassan Zewail (February 26, 1946 – August 2, 2016) was an Egyptian and American chemist,[4] known as the "father of femtochemistry".[5] He was awarded the 1999 Nobel Prize in Chemistry for his work on femtochemistry and became the first Egyptian and Arab to win a Nobel Prize in a scientific field,[6] and the second African to win a Nobel Prize in Chemistry. He was the Linus Pauling Chair Professor of Chemistry, a professor of physics, and the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.

Early life and education [edit]

Ahmed Hassan Zewail was born on February 26, 1946, in Damanhur, Egypt, and was raised in Desouk.[8] He received Bachelor of Science and Master of Science degrees in chemistry from Alexandria University before moving to the United States to complete his PhD at the University of Pennsylvania under the supervision of Robin M. Hochstrasser.[1][7]

Career [edit]

After completing his PhD, Zewail did postdoctoral research at the University of California, Berkeley, supervised by Charles B. Harris.[1] Following this, he was awarded a faculty appointment at the California Institute of Technology in 1976, and eventually became the first Linus Pauling Chair in Chemical Physics there.[1] He became a naturalized citizen of the United States on March 5, 1982.[8] Zewail was the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.[9]

Zewail was nominated and participated in President Barack Obama's Presidential Council of Advisors on Science and Technology (PCAST), an advisory group of the nation's leading scientists and engineers to advise the President and Vice President and formulate policy in the areas of science, technology, and innovation.[10]

Research [edit]

Zewail's key work was a pioneer of femtochemistry[5][11][12]—i.e. the study of chemical reactions across femtoseconds. Using a rapid ultrafast laser technique (consisting of ultrashort laser flashes), the technique allows the description of reactions on very short time scales – short

Table of Contents

Ahmed H. Zewail (born February 26, 1946, Damanhur, Egypt—died August 2, 2016, Pasadena, California, U.S.) was an Egyptian-born chemist who won the Nobel Prize for Chemistry in 1999 for developing a rapid laser technique that enabled scientists to study the action of atoms during chemical reactions. The breakthrough created a new field of physical chemistry known as femtochemistry. Zewail was the first Egyptian and the first Arab to win a Nobel Prize in a science category.

After receiving B.S. (1967) and M.S. (1969) degrees from Alexandria University, Zewail attended the University of Pennsylvania, where he earned a doctorate in 1974. Two years later he joined the faculty at the California Institute of Technology, and in 1990 he was selected as the school's first Linus Pauling Professor of Chemical Physics. Zewail also served as a visiting professor at a number of institutions, including Texas A&M University, the University of Iowa, and American University at Cairo. He founded (2011) Zewail City of Science and Technology, a premier institute of technology in Cairo.

Britannica Quiz Faces of Science

Because chemical reactions last only 10 to 100 femtoseconds (fs)—one femtosecond is 0.000000000000000001 second, or 10^{-15}—many believed it would be impossible to study the events that constitute a reaction. In the late 1980s, however, Zewail was able to view the motion of atoms and molecules by using a method based on new laser technology capable of producing light flashes just tens of femtoseconds in duration. During the process, known

How Ramjets Work

By: Nicholas Gerbis | Updated: Apr 16, 2024

NASA engineer Laura O'Connor inspects a supersonic ramjet (scramjet) engine model at Langley Research Center in Hampton, Virginia.
© CORBIS

Key Takeaways

- A ramjet is a type of air-breathing jet engine that operates on the principle of compressing incoming air without the need for rotating parts.
- It relies on the high-speed forward motion of the aircraft to compress air, making it suitable for supersonic and hypersonic flight.

Guinness Recognizes NASA's X-43A Scramjet Speed Record

NASA

JUN 05, 2013

RELEASE

It's official. The new world speed record for a jet-powered aircraft, set by NASA in November, has been officially recognized by Guinness World Records.

The accomplishment, the third and final flight in the experimental X-43A project, demonstrated that an advanced form of air-breathing (jet) engine could power an aircraft at nearly 10 times the speed of sound. Data from the unpiloted, 12-foot-long research vehicle show that its revolutionary "scamjet" engine worked successfully at Mach 9.6 or nearly 7,000 mph, as it flew at about 109,000 feet over the Pacific Ocean west of California.

The flight was the culmination of NASA's Hyper-X Program, a

LATIN AMERICAN HISTORY
Capoeira: From Slave Combat Game to Global Martial Art
Matthias Röhrig Assunção
https://doi.org/10.1093/acrefore/9780199366439.013.293
Published online: 25 February 2019
Summary
Capoeira is a martial art that developed from combat games enslaved Africans brought to Brazil. It is systematically documented since the beginning of the 19th century in Rio de Janeiro and later in other port cities. During the 19th century capoeira was increasingly practiced by the poor free people, black and of mixed ancestry, and also by white immigrants. Capoeira gangs controlled their territories against intruders and allied with political parties until the Republican purge of 1890. Capoeira survived best in Bahia, where it remained more associated with other forms of Afro-Brazilian culture and acquired many of its features still extant in present-day capoeira. From the 1930s onward, capoeira masters such as Bimba and Pastinha modernized capoeira, leading to the emergence of the Regional and Angola styles. Bahian capoeiristas migrated to Rio de Janeiro and São Paulo in search of better opportunities during the 1950–1970s. There they and their students developed what later became known as "Contemporary capoeira" (Capoeira Contemporânea) which is the most practiced style today. Capoeira was and is practiced in various ways: as a friendly game or as a fight, as a combat sport, or as an Afro-Brazilian cultural activity. Since the 1980s, capoeira has undergone a process of globalization and is now practiced in many countries around the world. Capoeira is the only martial art of the African Diaspora that is known and practiced worldwide. Writing on Capoeira has rapidly grown in a number of disciplines, leading to the constitution of its own interdisciplinary field of study.

GUANTANAMO DETAINEE PROFILE

Detainee ISN: YM-1017

Detainee Name	Omar Muhammad Ali al-Rammah
Detainee Aliases	'Faysal Alawi, Issa, Mikhlafi, Zakariya
Nationality	Yemeni
Date of Birth	15 December 1975
Arrival at Guantanamo	May 2003

~~(U//FOUO)~~ Omar Muhammad Ali al-Rammah (YM-1017) was probably a low-level mujahidin fighter in Bosnia during the mid-1990s before becoming a facilitator for al-Qa'ida–affiliated extremists in the late 1990s. He may have trained at al-Qa'ida–associated camps in Afghanistan before relocating to Georgia in mid-2001 to support the Chechen jihad. Rammah was arrested in April 2002 in an operation in which he was to provide detonators for a remote-controlled explosive device.

trusted but low-level mujahidin facilitator while he aspired to enter Chechnya to fight. He arranged to acquire fraudulent passports; and sought to acquire weapons, ammunition, and other supplies for mujahidin operations in Chechnya." It was also claimed that he "probably received some training under Abu Atiya, who led a toxin network while in Georgia, but probably had no other involvement in its operations." Captured in April 2002 by Russian forces, he arrived at Guantánamo in May 2003 after being held in a variety of CIA "black sites" and US-run secret prisons in Afghanistan.

Moving on to his behavior in Guantánamo, the summary noted that, although he has been "moderately compliant," he "has refused to cooperate with US personnel and probably retains an extremist mindset" — again, the use of the word "probably" does not inspire confidence that this is necessarily an accurate assessment. The summary added that al-Rammah "has made no effort to reconnect with family," although this claim is contradicted by his civilian lawyer, Beth Jacob, who, in her submission to the board, posted below, explicitly states that "despite several efforts by the International Red Cross (which my firm has confirmed independently through conversations with the ICRC) and others — he has not been able to make contact with his family since his arrival at Guantánamo."

The summary also noted that al-Rammah

Bosnian Serb general to surrender

Former Bosnian Serb general Vinko Pandurevic, who is wanted by the UN war crimes tribunal in The Hague for alleged genocide during Bosnia's 1992-95 war, will surrender to the court, the Serbian government said.

Slobodan Milosevic's exit turned the tide against Serb generals

20 Mar 2005

Pandurevic announced his decision after talks earlier on Sunday in the Serbian capital with Serbian Justice Minister Zoran Stojkovic, a government statement said.

"After the talks with minister Stojkovic, General Vinko Pandurevic decided to voluntarily surrender to The Hague to help his people," the statement added.

Pandurevic, who is wanted over his role in the 1995 massacre of some 8000 Muslims by Serb forces in the eastern Bosnian town of Srebrenica, will travel to The Hague on Wednesday accompanied by a Serbian government minister, according to the statement.

The general will also be accompanied by Bosnian Serb Interior Minister Darko Matijasevic, the Bosnian Serb government said.

HENK PANDER, NOVEMBER 21, 1937 – APRIL 6, 2023

Henk Pander lived a long life as a pure artist, undiminished in the moral voracity and aesthetic ferocity with which he confronted the universe. His paintings are brave, plaintive and vivid, deeply personal and yet, for precisely that reason, challengingly universal. Henk embodied the best of representational realism—appropriate for an artist trained in the classical Dutch traditions of Rembrandt and Vermeer. But he was also, as an immigrant, American, and product of Portland's 1960s counterculture, a universalist driven by moral outrage. His art exemplified the power of visual art to express both historical significance and intimate emotion, a history painter who magnified and heightened historical reality through the prism of his delicate imaginative vision: Henk Pander was justifiably proud to be an heir to Rembrandt.

Press Release

CHAMBERS

(Exclusively for the use of the media. Not an official document)

The Hague, 14 December 2001
CC/P.I.S./651e

The indictment against Vinko Pandurevic is unsealed.

On Friday 7 December 2001, the disclosure of the indictment against Vinko Pandurevic was ordered. The indictment was confirmed on 2 November 1998 and amended on 27 October 1999.

THE ACCUSED

Born in 1959 in Sokolac (Bosnia and Herzegovina), Vinko Pandurevic was an Infantry Captain in the Yugoslav People's Army (JNA) prior to being appointed Brigade Commander within the Bosnian Serb Army (VRS). According to the indictment, he was Commander of the "Zvornik Brigade" from 12 December 1992 through to November 1996, which was involved in the July 1995 attack on the Srebrenica "safe area" and the subsequent killing and execution of Bosnian Muslim men and boys. Vinko Pandurevic was promoted to the rank of General-Major in June 1997, and was a member of the VRS General Staff until he was relieved in April 1998.

FACTUAL ALLEGATIONS

The indictment alleges that between about 11 July 1995 and 1 November 1995, Vinko Pandurevic, "*intending to destroy a part of the Bosnian Muslim people as a national, ethnical or religious group*", killed and caused serious bodily or mental harm to members of the group. He allegedly "*planned, instigated, ordered or otherwise aided and abetted in the planning, preparation or execution*" of the "*opportunistic killings*" and "*organised mass executions*" of thousands of captured Bosnian Muslim men and boys from the Srebrenica "safe area".

5. Developments in Surgery

HEART SPECIALIST DR. MICHAEL DEBAKEY, C. 1994.

Born in Lake Charles, Louisiana in 1908 to Lebanese immigrants, Michael DeBakey (the Anglicized form of *Debaghi*) grew up spending time in his father's pharmacy and enjoyed sewing, gardening and learning how motors and other machinery work. He earned his medical degree in 1932 and served in the Surgical Consultants Division of the Army Surgeon General's Office from 1942 to 1946.

It was during this time that DeBakey and his colleagues developed special units dedicated to providing surgical care to soldiers wounded near the front lines. They were first deployed in 1943, though are best known for their work during the Korean and Vietnam conflicts, when they were known as the Mobile Auxiliary Surgical Hospital (MASH) units.

DeBakey's surgical contributions continued for the next several decades and included performing the first successful removal of a blockage of the carotid artery (1953), developing the concept behind coronary bypass surgery (1963), pioneering the field of telemedicine with the first demonstration of open-heart surgery transmitted overseas via satellite (1965), and being the first to use a partial artificial heart (1966).

History of juggling
Ancient Egypt
ANCIENT JUGGLING TOMBS – PART 1

Los Angeles Times

SUBSCRIBE LOG IN

According to one story, the first circus was staged by Ptolemy II Philadelphus, king of Egypt from 285 to 246 BC, who gathered animals, birds and reptiles from Africa and the Middle East and put them on parade for his people on days of celebration.

Next year, to celebrate the national circus' 20th anniversary, the Ministry of Culture is planning an international festival and will ask 35 countries to compete in a circus competition.

Why will there be no other Arabic circuses there?

In the conservative Islamic countries, the idea of a woman performing in a leotard and barelegged would be abhorrent, as would sexually integrated audiences. Security-conscious governments might also be wary of approving events that attract crowds, as a circus does. And in many other countries of this region, there is simply no tradition of humor as an art form--and little culture other than that of the desert heritage.

"The Egyptians are the only Arabs who would understand the value of laughter and having fun," said one observer.

ANCIENT JUGGLING TOMBS – PART 1

September 10, 2020

(Haz clic aquí para español.)

One of the oldest representations of juggling dates from 1994 – 1781 BC, in the tombs at Beni Hasan. Due to the time that has passed and the little documentation that there is in this regard, researching before Christ juggling is a never-ending job. These investigations require deepening in disciplines such as archaeology, history, anthropology. It is not easy to unveil a new discovery about the ancient history of juggling. However, prominent juggling historians and researchers such as David Cain, Eric Åberg, Thom Wall, and others have provided us with invaluable data. All my admiration for them.

For my part, I did my homework to research some BC juggling tombs, and I was able to find some interesting things that I will share with you below.

In many articles on juggling history, the images on the tombs of Beni Hasan are discussed, saying that it was an Egyptian prince who marked his tomb with depictions of juggling. Beni Hasan is not actually a prince; it is the name of a town in Middle Egypt on the eastern bank of the Nile River where a necropolis is found, and there lie the remains of governors, monarchs and pharaohs.

According to prosecutors, the indictment charged the gang's "second-in-command," Kwasi Mack, a/k/a "Welchs," a/k/a "The Prince," a/k/a "Mini Me," 27, of Belleville, and Corey Batts, a/k/a "C-Murder," a/k/a "Cee," 31, of Newark, with a 2006 shooting that left one rival gang member dead and another wounded. In addition, Tony Phillips, a/k/a "Blue," 25, of Newark, was added to counts charging two attempted murders that took place in October of 2013.

Hamlet was convicted in July 2018 following a two-month trial before U.S. District Judge Madeline Cox Arleo. Arleo imposed the sentence Wednesday in Newark federal court.

Tony Phillips, a/k/a "Blue," 27, of Newark and Manley were also convicted following a two-month trial in Newark federal court.

Grape Street Watts Crips

Article Talk

From Wikipedia, the free encyclopedia

The **Grape Street Watts Crips** is a Crip subset based in the Watts neighborhood of Los Angeles. The gang's rivalry with the Bounty Hunter Bloods has been described as being "the most violent and long lasting feud between two gangs that are in the Watts area."[3]

Grape Street Watts Crips

Grape Street, Los Angeles

Founding location Watts

Years active 1970s – present

Territory California, Tennesse New Jersey[2]

Rivals Bounty Hunter Bloo

History [edit]

Brandon "BL" Bullard, a veteran of the Grape Street Watts Crips, was murdered by the East Coast Crips in 2008. The murder of Bullard sparked a war that resulted in 26 wounded and 9 dead in the six we that followed.[4]

Media appearances [edit]

Members of the Grape Street Watts Crips appeared in the docume *Crips and Bloods: Made in America*, directed by Stacy Peralta.[5] A Crips member and legendary rapper Eazy-E mentioned the area of Street and maybe the gang's set of the same name in that territory song "Green n Crawl"

Average human height by country
8 languages
From Wikipedia, the free encyclopedia
Below are two tables which report the average adult human height by country or geographical region. With regard to the first table, original studies and sources should be consulted for details on methodology and the exact populations measured, surveyed, or considered. With regard to the second table, these estimated figures for adult human height for said countries and territories in 2019 and the declared sources may conflict with the findings of the first table.
First table: individual surveys and studies
Accuracy
As with any statistical data, the accuracy of the findings may be challenged. In this case, for the following reasons:
Measured and self-reported figures
Data are representative of the majority of the adult population in the country or region.[9]
Note: Letters in grey indicate non-measured height.
Country / region | Average male height | Average female height | Stature ratio (male to female) | Sample population / age range | Share of pop. over 18 covered[9][10][6] | Method | Year | Ref.
Dinaric Alps | 184.6 cm (6 ft 1½ in) | 171.1 cm (5 ft 7½ in) | 1.08 | 17 (N=m: 2,705 f: 2,842, SD= m: 6.84 cm (2.7 in) f:6.15 cm (2.4 in)) | 0.0% | Measured | 2005 | [59]
Bosnia and Herzegovina | 183.9 cm (6 ft 1½ in) | 171.8 cm (5 ft 7½ in) | 1.07 | Students at UBL, 19–32(m), 19–26(f) (N= m:178 f:34, SD= m: 7.11 cm (2.8 in) f:6.56 cm (2.6 in)) | 0.4% | Measured | 2014 | [35]

NASA Hyper-X Program Demonstrates Scramjet Technologies
X-43A Flight Makes Aviation History
NASAFacts
A modified Pegasus booster rocket ignites moments after release from the B-52B, beginning the acceleration of the X-43A over the Pacific Ocean in March of 2004. The X-43A vehicle is mounted on the nose of the rocket.
NASA made aviation history with the first and second successful flights of a scramjet-powered airplane at hypersonic speeds—speeds greater than Mach 5 or five times the speed of sound. Compared to a rocket-powered vehicle like the Space Shuttle, scramjet (supersonic combustion ramjet) powered vehicles promise more airplane-like operations for increased affordability, flexibility and safety for ultra high-speed flights within the atmosphere and into Earth orbit. Because they do not have to carry bulky oxygen tanks, as rockets must, vehicles powered by air-breathing scramjets can be smaller and lighter.
Researchers have worked for decades to demonstrate scramjet technologies, first in wind tunnels and computer simulations, and now in an airplane in flight. Ultimate applications include future hypersonic missiles, hypersonic airplanes, the first stage of two-stage-to-orbit reusable launch vehicles and single-stage-to-orbit reusable launch vehicles.
High-Risk, High-Payoff Program
The eight-year, approximately $230 million NASA Hyper-X program was a high-risk, high-payoff research program. It undertook challenges never before attempted. No vehicle powered by an air-breathing engine had ever flown at hypersonic speeds before the successful March 2004 flight. In addition, the rocket boost and subsequent separation from the rocket to get to the scramjet test condition had complex elements that had to work properly for mission success. Careful analyses and design were applied to reduce risks to acceptable levels; even so, some level of residual risk was inherent to the program.

Better designs for the future of hypersonic flight
In the 1960s, an improved ramjet was devised in which the burner could function supersonically. The modified ramjet, or scramjet, minimizes the losses due to the shock wave flow loss allowing the engine to produce enough thrust for hypersonic travel or speeds up to Mach 15.
Since the scramjet uses external air to power the combustor, it is much more efficient than a rocket, which must carry all of its oxygen on board. Scramjets are optimized for hypersonic flight and will not function at speeds below Mach 3, requiring a rocket to accelerate it up to critical engine stall speeds.

ST. LOUIS – A man from St. Louis on Wednesday admitted possessing and sharing child pornography and fleeing from St. Louis while on house arrest.

Daniel Bert, 38, pleaded guilty to a felony charge of transportation of child pornography. He admitted that after receiving two tips about Bert, the FBI discovered he was discussing his sexual interest in young children on Kik Messenger. An undercover FBI special agent began communicating with Bert on another app, Wickr, and Bert sent a picture of his genitals to the agent. He also expressed his sexual interest in young children, his plea agreement says. In text messages, Bert told the agent that he had a hard drive full of child pornography. On the same day that agents obtained a search warrant for Bert's home, Bert asked the undercover agent to join him in an online video chat during which Bert played videos containing child pornography.

Woman Who Escaped From "Children Of God" Cult Tells Her Story Of Abuse And Brainwashing
Trigger warning: child abuse, suicide
A survivor of one of the most controversial cults shared her harrowing experiences, highlighting the religious movement's exploitation of children, her advocacy against extremism, and the psychology behind cults
36-year-old Daniella Mestyanek Young detailed the abuse she suffered as a child growing up in the Children of God cult, exposing how the so-called "free love" ideals of the group promoted the sexual abuse of children.
Daniella escaped what has been labeled a "sex cult" at 15 and has since been working as a self-described "scholar of cults, extreme groups, and extremely bad leadership."
In a bombshell exposé with The Sun, published on Sunday (March 10), Daniella, a daughter of high-ranking members who was shuffled between compounds in the US, Mexico, and Brazil, explained that when the cult was in its prime, it brought in hundreds of millions of dollars, adding that her grandfather — a senior leader — "still runs the money."
In 1968, former priest David Berg founded Teens for Christ, which evolved to become the infamous Children of God cult, characterized by allegations of rape, child abuse, and religious prostitution.

Man sentenced to 47 years to life for kidnapping 9-year-old girl from upstate New York park

FILE - Craig N. Ross Jr. is arraigned before Judge James A. Murphy III on charges related to the kidnapping of a 9-year-old from Moreau Lake State Park, Nov. 17, 2023, at Saratoga County Court in Ballston Spa, N.Y. Ross was sentenced Wednesday, April 17, 2024, to 47 years to life in prison for kidnapping and sexually assaulting a 9-year-old girl who went missing from a state park in upstate New York last year. (Will Waldron/The Albany Times Union via AP, File)

BALLSTON SPA, N.Y. (AP) — A man was sentenced Wednesday to 47 years to life in prison for kidnapping and sexually assaulting a 9-year-old girl who went missing from a state park in upstate New York last year.

Craig N. Ross Jr. pleaded guilty in February to taking the girl in September from a campground at Moreau Lake State Park, a rural area about 35 miles (60 kilometers) north of Albany. The disappearance sparked a 48-hour-search that ended when she was found alive at a camper Ross was staying in.

ALEXANDRIA, Va. (AP) — A civilian contractor sent to work as an interrogator at Iraq's infamous Abu Ghraib prison resigned within two weeks of his arrival and told his corporate bosses that mistreatment of detainees was likely to continue.

Jurors saw the October 2003 email from Rich Arant, who worked for military contractor CACI, during testimony Wednesday in a lawsuit filed by three Abu Ghraib survivors. The former prisoners are suing CACI, alleging that the Reston-Virginia based company shares responsibility for the mistreatment they endured.

CACI had a contract to supply interrogators to the Army after the 2003 invasion of Iraq, and scrambled to supply the needed personnel. The first CACI interrogators arrived at Abu Ghraib on Sept. 28 of that year.

Arant sent his resignation letter to CACI on Oct. 14. He informed his bosses about

Sahih al-Bukhari » To make the Heart Tender (Ar-Riqaq) - كتاب الرقاق

Narrated 'Abdullah:

The Prophet drew a square and then drew a **line** in the middle of it and let it extend outside the square and then drew several small **lines** attached to that central **line**, and said, "This is the human being, and this, (the square) in his lease of life, encircles him from all sides (or has encircled him), and this (**line**), which is outside (the square), is his hope, and these small **lines** are the calamities and troubles (which may befall him), and if one misses him, an-other will snap (i.e. overtake) him, and if the other misses him, a third will snap (i.e. overtake) him."

حَدَّثَنَا صَدَقَةُ بْنُ الْفَضْلِ، أَخْبَرَنَا يَحْيَى، عَنْ سُفْيَانَ، قَالَ حَدَّثَنِي أَبِي، عَنْ مُنْذِرٍ، عَنْ رَبِيعِ بْنِ خُثَيْمٍ، عَنْ عَبْدِ اللَّهِ ـ رضى الله عنه ـ قَالَ خَطَّ النَّبِيُّ صلى الله عليه وسلم خَطًّا مُرَبَّعًا، وَخَطَّ خَطًّا فِي الْوَسَطِ خَارِجًا مِنْهُ، وَخَطَّ خُطَطًا صِغَارًا إِلَى هَذَا الَّذِي فِي الْوَسَطِ، مِنْ جَانِبِهِ الَّذِي فِي الْوَسَطِ وَقَالَ " هَذَا الإِنْسَانُ، وَهَذَا أَجَلُهُ مُحِيطٌ بِهِ ـ أَوْ قَدْ أَحَاطَ بِهِ ـ وَهَذَا الَّذِي هُوَ خَارِجٌ أَمَلُهُ، وَهَذِهِ الْخُطَطُ الصِّغَارُ الأَعْرَاضُ، فَإِنْ أَخْطَأَهُ هَذَا نَهَشَهُ هَذَا، وَإِنْ أَخْطَأَهُ هَذَا نَهَشَهُ هَذَا "

Page, Brin, and **Scott Hassan**—the rarely acknowledged "third founder" of Google—were building a machine that converts the time we spend exploring the Internet into money as a means to an end. Money was just the first step in the grand plan. Hassan, who bailed out of Google early, is still trying to cure death and colonize the solar system. Page and Brin stayed on, and changed as Google did—monetized, and thoroughly civilized. "It's really depressing," said one early employee.

From Wikipedia, the free encyclopedia

Scott Hassan is a computer programmer and entrepreneur who was the main programmer of the original Google Search engine, then known as BackRub. He was research assistant at Stanford University at the time. Hassan left before Google was officially founded as a company.

In 1997 Hassan founded FindMail, later renamed to eGroups.com, an email list management web site. He owned 5.7% of eGroups in March 2000 when the company filed a Form S-1. eGroups was later bought by Yahoo! for $432m in August 2000 in a stock deal and became Yahoo! Groups.

In 2006 Hassan started Willow Garage, a robotics research lab and technology incubator. The organization created the open source robotics software suite ROS (Robot Operating System). Willow Garage shut down in early 2014.

As Joker streams in the UK, Sean Alexander considers his Jewish origins.
DC Comics, like its rival Marvel, has long been acknowledged for its rich Jewish heritage in terms of the creation of its most iconic characters. While Batman himself was the co-creation of Jews Bob Kane and Bill Finger, it was another Jew – Jerry Robinson – who first introduced the Caped Crusader's most arch nemesis, the Joker.
Video unavailable

With Todd Phillips' origin story of Joker from last year now showing on Sky Cinema and Now TV, it would seem an appropriate time to explore in greater depth the enhanced Jewish aspects this latest film adaptation has yielded.
Director Phillips is himself Jewish, born Todd Bunzl, as is Joaquin Phoenix who portrays the title role. One of the clown colleagues of protagonist Arthur Fleck (Phoenix), Randall is played by the Jewish actor Glenn Fleshler.
Arthur Fleck lives in Gotham City, 'aka New York, circa 1981', and hence is basically Jewish. He resides, with his mother, in, what J. Hoberman called, 'a slum tenement on a grim street that's recognizably the Bronx. (Given his family name, he and his mother might be the last remnants of a once-Jewish neighborhood.)'
Fleck's surname itself has origins in the Ashkenazi word for 'spot' or 'patch'. Note how the German phrase 'gelber fleck' was the street slang for the yellow Star of David that the Nazis forced Jews to wear. Fleck is a suitable surname given how
Sean Alexander is a PhD Candidate at Bangor University, exploring Jewishness and Judaism in the films of David Cronenberg.

4. Travel to Muzadalifah
After sunset, pilgrims reach Muzadalifah for Maghrib and Asr prayers. One can rest until the night before Fajr's prayers to prepare for the next morning's ritual of pelting the Devil. Pilgrims take equal sized pebbles to throw at the Devil. On the 10th day, Dhu al-Hijjah pilgrims depart for Makkah to do Tawaf al-Ifadah & Saee before sunset. They must return to Mina to perform Rami, Nahr, and Halq.
5. Perform Rami
Pilgrims are required to complete Rami or the stoning of the Devil on the 11th, 12th, and 13th days of Hajj. Seven stones of similar sizes are thrown at Jamrat al-Aqabah at noon each day. All pilgrims must depart for Makkah before sunset on 12th of Dhu al-Hijjah.
6. Perform Nahr or animal sacrifice
The stoning ceremony is only completed with animal sacrifice. Pilgrims can buy a sacrifice coupon or voucher, indicating that a sacrifice has taken place in their name. A lamb or a camel are the two options for sacrificial animals. The animal is slaughtered, and its meat is packed and given to the poor in the countries of the Middle East.
7. Carry Out Halq and Taqsir

America's First Jet Ace Displayed His Flying Skills in Three Wars
James Jabara stands on a F-86 Sabre in an Air Force photo from April 1953. (U.S. Air Force photo)
Listen to this article now
As a high school student, James Jabara's eyesight was so weak that he had to wear glasses. For most students, this might not rankle beyond the occasional taunt of "four eyes," but young Jabara wanted more than anything to be a pilot. To improve his eyes, he ate 20 carrots a day for "a considerable time," according to Prof. Craig Miner of Wichita State University. This literally homegrown remedy must have succeeded, because today we remember Col. James Jabara as the world's first jet-vs.-jet ace.
Jabara flew more than 100 European missions during World War II, all before he was 20. His courage was legendary, even then. Miner recounts the day when Jabara attacked a German plane, and the two craft collided in the air. The pilots floated to the ground and shook hands in recognition of each other's bravery.

"Jabby" redirects here. For another person nicknamed "Jabby", see Gérard Crombac.
James "Jabby" Jabara (10 October 1923 – 17 November 1966) was the first American and United States Air Force jet ace.[1][2] Born in Oklahoma, he lived in Kansas where he enlisted as an aviation cadet at Fort Riley after graduating from high school. Jabara attended four flying schools in Texas before he received his pilot's wings and was commissioned as a second lieutenant. Jabara flew two tours of combat duty in Europe during World War II as a North American P-51 Mustang pilot, and scored 1.5 air victories against German aircraft.
Jabara flew his first jet aircraft in 1948, the USAF Lockheed F-80 Shooting Star before transitioning to the USAF North American F-86 Sabre. Jabara used this aircraft to shoot down multiple Soviet-built MiG-15 jets during the Korean War. He achieved his first confirmed air victory of the war on 3 April 1951. A month later he was credited with his fifth and sixth victories, making him the first American jet ace in history. He eventually scored 15 victories, giving him the title of "triple ace". Jabara was ranked as the second-highest-scoring U.S. ace of the Korean War. He received the Distinguished Service Cross, Silver Star, Distinguished Flying Cross, Air Medal, and the British Distinguished Flying Cross for his accomplishments in combat.
Jabara next held a series of commands at various Air Force bases across the United States. He flew the Lockheed F-104 Starfighter and later the Convair B-58 Hustler. In 1966, while on leave from service in Vietnam, Colonel Jabara was traveling with his family in two cars to their new home when his daughter crashed the car she was driving and he was riding in, killing them both. They were buried together at Arlington National Cemetery. In recognition of his contributions to military aviation, an airport outside of Wichita, Kansas was named in his honor. Each year the United States Air Force Academy alumni association bestows the Jabara Award upon an Academy graduate whose aerospace accomplishments demonstrate superior performance.

From Wikipedia, the free encyclopedia

Ahmed Hassan Zewail (February 26, 1946 – August 2, 2016) was an Egyptian and American chemist,[4] known as the "father of femtochemistry".[5] He was awarded the 1999 Nobel Prize in Chemistry for his work on femtochemistry and became the first Egyptian and Arab to win a Nobel Prize in a scientific field,[6] and the second African to win a Nobel Prize in Chemistry. He was the Linus Pauling Chair Professor of Chemistry, a professor of physics, and the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.

Early life and education [edit]

Ahmed Hassan Zewail was born on February 26, 1946, in Damanhur, Egypt, and was raised in Desouk.[8] He received Bachelor of Science and Master of Science degrees in chemistry from Alexandria University before moving to the United States to complete his PhD at the University of Pennsylvania under the supervision of Robin M. Hochstrasser.[1][7]

Career [edit]

After completing his PhD, Zewail did postdoctoral research at the University of California, Berkeley, supervised by Charles B. Harris.[7] Following this, he was awarded a faculty appointment at the California Institute of Technology in 1976, and eventually became the first Linus Pauling Chair in Chemical Physics there.[7] He became a naturalized citizen of the United States on March 5, 1982.[9] Zewail was the director of the Physical Biology Center for Ultrafast Science and Technology at the California Institute of Technology.[9]

Zewail was nominated and participated in President Barack Obama's Presidential Council of Advisors on Science and Technology (PCAST), an advisory group of the nation's leading scientists and engineers to advise the President and Vice President and formulate policy in the areas of science, technology, and innovation.[10]

Research [edit]

Zewail's key work was a pioneer of femtochemistry[5][11][12]—i.e. the study of chemical reactions across femtoseconds. Using a rapid ultrafast laser technique (consisting of ultrashort laser flashes), the technique allows the description of reactions on very short time scales – short

In full: Ahmed Hassan Zewail

Born: February 26, 1946, Damanhur, Egypt

Died: August 2, 2016, Pasadena, California, U.S. (aged 70)

Awards And Honors: Nobel Prize

Subjects Of Study: chemical reaction • femtosecond spectroscopy

After receiving B.S. (1967) and M.S. (1969) degrees from Alexandria University, Zewail attended the University of Pennsylvania, where he earned a doctorate in 1974. Two years later he joined the faculty at the California Institute of Technology, and in 1990 he was selected as the school's first Linus Pauling Professor of Chemical Physics. Zewail also served as a visiting professor at a number of institutions, including Texas A&M University, the University of Iowa, and American University at Cairo. He founded (2011) Zewail City of Science and Technology, a premier institute of technology in Cairo.

Faces of Science

Because chemical reactions last only 10 to 100 femtoseconds (fs)—one femtosecond is 0.000000000000000001 second, or 10^{-15}—many believed it would be impossible to study the events that constitute a reaction. In the late 1980s, however, Zewail was able to view the motion of atoms and molecules by using a method based on new laser technology capable of producing light flashes just tens of femtoseconds in duration. During the process, known

Research: Arab Inventors Make the U.S. More Innovative

by Sami Mahroum, Georg Zahradnik, and Bernhard Dachs

February 22, 2017

From Hassan Kamel Al-Sabbah, a Lebanese-born American serial inventor, to Ahmed Zewail, the 1999 Nobel laureate in chemistry, to Farouk El-Baz, a NASA and MIT scientist who helped plan the Apollo landing, to Elias A. Zerhouni, the 15th director of the National Institutes of Health, Arab immigrants have made major contributions to American science and technology.

As the Trump administration attempts to limit immigration from several Arab states, these contributions deserve extra attention. The problem is that to date there has been little work to document the extent of Arab contributions to American innovation. We recently set out to remedy that, and our analysis suggests that Arab inventors play a major role in U.S. innovation. They also contribute significantly to the success of major U.S. tech companies.

To shed more light on Arab contributions to the U.S. innovation system, we ran an exercise matching Arabic first names with international patent applications filed under the Patent Cooperation Treaty (PCT). This data includes patents by people residing in the U.S. and around the world. Our approach has been used before, in a study of ethnic innovation in the U.S. as well as in a study of female inventors.

There are obvious shortcomings to this approach. For instance, many non-Arab Muslims have Arabic first names, such as Mohammad, Ali, or Omar, while some Arabs have non-Arabic names. We tried to mitigate

circuitry to make early designs for electric cars. Again, his early designs have become extremely prescient for the modern age, where electric cars are being turned to as a replacement for fueling cars with petrol. Al-Sabbah experimented on his own car to try and crack practically powering a car with solar energy which is an incredibly early attempt at something which is today the focus of huge companies like Tesla.

Arc-Welding

In heavy industries such as the development of wind farms, ships, tanks, turbos, and other heavy-duty building, arc-welding is crucial. Al-Sabbah developed a rectifying system which was absolutely vital to the development of the arc welding machine. This is a really important development where-by welding for huge pieces of metal that are required for heavy industries is facilitated by, what turns out to be something of an obsession of Al-Sabbah, the use of electricity to heat up the metal to the required temperature to weld it effectively to the other parts of the heavy items. This proved to be really important during the Second World War, where industrial developers used Al-Sabbah's techniques to develop the requisite welding techniques for the extreme mass development of vehicles and turbos that powered the respective war efforts.

Television

To make a departure from the heavy, industry-oriented worlds of space travel and heavy instrument arc-welding, Al-Sabbah's developments and patents, 5 of them to be specific, made a huge impact on the world of televisions and screens in general. In fact, so impactful were his patents that when the, now ubiquitous, LCD (liquid crystal display) screens were introduced they were created directly out of patents that belonged to Al-Sabbah. His impact on televisual transmission directly led to the creation of military LCDs which are in aircraft, designed to display information in super high detail. It all comes back to his developments on the cathode ray tube, a field in which two of the patents sat specifically. His screens have huge numbers of pixels which allowed for a far greater color detail than the normal black and green filters. It is proposed that without Al-Sabbah, modern television wouldn't exist.

6 Groundbreaking Innovations by Arab Americans

Americans born in or with ancestral ties to Arab-speaking countries have made countless significant scientific, medical and engineering contributions.

BY: ELIZABETH YUKO
UPDATED: MARCH 26, 2024 | ORIGINAL: MARCH 31, 2022

copy page link | PRINT PAGE

While Americans born in or with ancestral ties to Arab countries have made countless significant scientific, medical and engineering contributions, most have never made it into record books. From cryptography, to the artificial heart, to the iPod, here are a few examples of some of the major advancements by Arab Americans.

1. Television Transmission and LCD Screens

Born in Nabatieh, Lebanon in 1895, Hassan Kamel Al-Sabbah studied and then taught mathematics at the American University of Beirut before immigrating to the United States in 1921. After a brief stint studying at the Massachusetts Institute of Technology (MIT), Al-Sabbah earned a master's degree in engineering sciences from the University of Illinois, says Lujine Nasralla, communications specialist at the Arab American National Museum in Dearborn, Michigan.

"In 1923, General Electric (GE) hired him to work in its Engineering Laboratory under a contract that awarded him a dollar for each of his patents," Nasralla explains, noting that between 1927 and 1935, he applied for patents for 52 of his inventions while working at GE. Some of the patents Al-Sabbah was awarded during his time at GE include three for innovations in television transmission technology (granted between 1928 and 1930), and two for cathode ray tubes (1935).

Though Al-Sabbah died in a car accident 1935, GE engineers continued to rely on the technology he invented, including developing the liquid crystal display (LCD) based on one of his patents. Al-Sabbah made numerous other significant contributions to science, technology and engineering, especially in the field of solar energy.

2. The Waffle Cone

Acrobatics (Latin: akrobatos — climb upward) is usually understood as

- a kind of physical exercises,
- a kind of performing arts,
- a sport.

Acrobatics requires extraordinary balance, agility, flexibility, control, concentration and motor coordination. A person who performs acrobatics is called an acrobat. Acrobatic skills were known in ancient Egypt, Greece, Rome and China. In the 19th century acrobatic performances became popular in circuses of Europe. In the 20th century it became an organized sport with leagues and championships.

with legs stretched, with one player's feet on top of the toes of the other. If the third player managed to jump over that barrier, the two sitting players placed their palms on top of their feet to heighten the barrier which the third player had to jump across without touching.
This game is still practiced in the Egyptian countryside and is called "goose steps".

Swimming

Swimming was the favorite sport of the ancient Egyptians, who made use of the River Nile to practice it. The Nile was not the only place for swimming contests. Noblemen's palaces had swimming pools in which princes learnt the sport. The calm waters of the Nile encouraged youths to hold swimming competitions in which they could show their skills.

Rowing

Rowing was one of the sports that required most physical strength on the part of the ancient Egyptian. Plates recorded team-rowing in which the players depended on harmonizing their rowing according to the directives of their leader who held the rudder. The leader also controlled their movement through a high-pitched systematic call to unify the moment when oars touched the surface of the water and that helped to push the boat forward more steadily and swiftly - a method still being adopted in rowing nowadays.

Gymnastics (floor exercise)

The ancient Egyptians invented many sports, some for entertainment, and others for keeping strong, physically fit, and slim.
The picture dates back to 2000 years BC. It shows a gymnastics drill in which the body is bent backwards until the hand s touch the ground, revealing bodily flexibility. It is one of the most commonly practiced exercises today.

Rhythmic Gymnastics

The picture shows four players performing rhythmic gymnastics in different positions. The one on the left stands on one foot, stretching his two arms horizontally, and lifting one leg as high as possible to the front to help him revolve swiftly and lightly.
The two players in the middle are standing facing each other, bending their arms near their shoulders while twisting their waists towards the left and right.
The fourth player stands on his head upside down in perfect equilibrium, without touching the floor with his arms. All these positions are close to some practiced in today's rhythmic gymnastics.

Javelin Throw

Javelin throwing during the Pharaonic age was first linked to hunting. Drawings show how the hunter could hit his prey by one single throw despite its speed. The javelin differed in length according to the kind of prey. The javelin is thrown upwards lightly so that it revolves in quick spins until it returns to the player to be used again. The javelin is a stick with a twisted end. The picture shows the player in a position of readiness to throw.

Fishing

Fishing was one of the sports practiced by kings, princes and commoners. There are many drawings of scenes of fishing as a hobby on the Saqqara tombs of the Old Kingdom as much as there are on the New Kingdom monuments.
The Egyptian Museum in Cairo comprises numerous kinds of fishing rods and hooks of various shapes, which indicate the advance of such a sport in ancient Egypt.

Boxing

Some ancient Egyptian scenes of boxing as a game were found in the tomb of "Mery Ra" in the Minia Governorate and in the "Ptah Hotep" tomb in Saqqara. In this picture, a player is depicted in a position ready to direct his blows with his fist to another player, who in turn, tries to repel these blows. Pharaohs and princes watched the boxing match, which indicates that it was an organized contest.

Weightlifting

Weightlifting was one of the sports known by the ancient Egyptians. One method of weightlifting was the attempt to lift a heavy sack of sand with one hand (clean and jerk lift) and keep it high in a quasi-vertical position. The player had to stay in that position for a short period. This is one of the rules of weightlifting applied till now.

High Jump

Ancient Egyptians practiced field and track sports such as the high jump. Two players sat opposite each other with legs stretched, with one player's feet on top of the toes of the other. If the third player managed to jump over that barrier, the two sitting players placed their palms on top of their feet to heighten the barrier which the third player had to jump across without touching.
This game is still practiced in the Egyptian countryside and is called "goose steps".

Drawings on pharaonic monuments tell us that several thousand years ago, the Egyptians had laid down basic rules for games, chosen a neutral referee, a uniform for players, and a means of announcing the winners by awarding them different collars.

Both winner and loser were met with ovation, the first for his superiority and the latter for his sporting spirit.

Hockey

Ancient Egyptians played a game that is similar to our present-day hockey. Drawings on tombs at Beni Hassan in Menia Governorate show players holding bats made of long palm-tree branches, with a bent end similar to that of the hockey bat. The hockey ball was made of compressed papyrus fibers covered with two pieces of leather in the shape of a semicircle. The ball was dyed in two or more colors.

Handball

Drawings of this sport are found on the Saqqara tombs, five thousand years old. The ball was made of leather and stuffed with plant fibers or hay, or made of papyrus plants in order to be light and more durable. It was seldom used for more than one match.
The painting shows four girls playing handball. Each team throws the ball to the other at the same time. Players can either be on their feet or on top of their teammates' backs while exchanging balls.

Archery

Archery was a well-known sport in Ancient Egypt and was often recorded on plates in ancient temples. These plates show the kings' and princes' skill in accurate aiming at the target, and their strength in pulling the bow. Archery competitions were common. In the 21st century BC King Amenhotep II boasted that he pierced the middle of a thick brass target with four arrows. He then set a prize for anyone who could do the same.

Gymnastics: Consecutive Vault

This painting represents pharaonic gymnastics. The players performed consecutive vaults without touching the floor with their heads and making more than one complete turn in the air.
At the end of the exercise the players stand firmly upright, which is one of the basic rules of floor exercise applied in today's Olympics.

Ancient Gymnastics History
Posted on December 9, 2010 by Gymnastics Zone in Articles
There is little to no direct knowledge available about the earliest times of man's gymnastics activities. There is no doubt among historians that people performed gymnastics and gymnastics-related activities like tumbling, jumping, swinging movements and group acrobatics early in the history of mankind in a number of areas around the world.
The History of Sport, Exercise and Physical Fitness
Gymnastics is one of the world's oldest physical activities and sports and its roots can be traced back thousands of years. There is evidence of early forms of gymnastics in the ancient civilizations in the Middle East and Asia. Gymnastics, in the form of acrobatics, calisthenics, precision drills and disciplined exercise has been around since ancient times.
7000 Years and Counting
Gymnastics was most likely first depicted in Egyptians artifacts. The earliest known physical evidence of gymnastics can be found in the art of ancient Egypt, where female acrobats performed for the Pharaohs and the Egyptian nobility. Acrobats entertained Egyptian nobility around 7,000 years ago judging by ancient frescoes. Many of these drawings have been dated and authenticated as far back as 5000 BC. These Egyptian hieroglyphs depict such gymnastics activities as backbend variations and partner stunts.
No Bull Vaulting
Beginning about 2,700 BC, acrobats would vault over the backs of bulls on the island of Crete when the Minoan civilization flourished. This is recorded in a well-known fresco from Crete at the palace at Knossos. It depicts a vaulter performing what is either a cartwheel or handspring over a charging bull.
No Warm-Ups and No Practice Vaults
The art of bull leaping as developed in Minoan Crete was performed by both men and women. The athlete would run toward a charging bull, grab its horns, and when tossed into the air, would execute various aerial movements, landing on the bull's

Who Invented Acrobatics?
While it's impossible to know exactly who invented acrobatics, the Ancient Egyptians are widely thought to be the first people to record it through their captivating art and literature.
Acrobatics has emerged from traditions all around the world, and we have proof of it that comes from many thousands of years ago. Depictions of female acrobatic dancers performing feats like backbends and other acrobatic moves have been discovered at ancient sites.

Acrobatic Gymnastics – a balancing act
Practised by both men and women, Acrobatic Gymnastics is amongst the oldest known sports practiced by the ancient Egyptians. The name comes from the Greek word 'acrobateo', meaning to rise or go forth.
Acrobatic Gymnastics is a modern and artistic discipline, which requires an extraordinary amount of courage and trust amongst gymnasts.
Acrobatic routines are choreographed to music and presented on a 12 X 12 metre sprung floor surface, Acrobatic Gymnastics is full of expression and provides gymnasts with a stage on which to shine.
In official competitions, Acrobatic Gymnastics offers five

About this Item
Title
A street Arab
Summary
"Shows one of New York's street gamins going through various acrobatic evolutions; he turns handsprings backward and forward, walks the crab, does cart wheels and other kindred feats. An exceptionally unique part of the performance is his standing on his head and twisting around like a top. It is safe to say he will be bald-headed at an early age"--Edison films catalog.

Capoeira: From Slave Combat Game to Global Martial Art
Matthias Röhrig Assunção
https://doi.org/10.1093/acrefore/9780199366439.013.293
Published online: 25 February 2019
Summary
Capoeira is a martial art that developed from combat games enslaved Africans brought to Brazil. It is systematically documented since the beginning of the 19th century in Rio de Janeiro and later in other port cities. During the 19th century capoeira was increasingly practiced by the poor free people, black and of mixed ancestry, and also by white immigrants. Capoeira gangs controlled their territories against intruders and allied with political parties until the Republican purge of 1890. Capoeira survived best in Bahia, where it remained more associated with other forms of Afro-Brazilian culture and acquired many of its features still extant in present-day capoeira. From the 1930s onward, capoeira masters such as Bimba and Pastinha modernized capoeira, leading to the emergence of the Regional and Angola styles. Bahian capoeiristas migrated to Rio de Janeiro and São Paulo in search of better opportunities during the 1950–1970s. There they and their students developed what later became known as "Contemporary capoeira" (*Capoeira Contemporânea*) which is the most practiced style today. Capoeira was and is practiced in various ways: as a friendly game or as a fight, as a combat sport, or as an Afro-Brazilian cultural activity. Since the 1980s, capoeira has undergone a process of globalization and is now practiced in many countries around the world. Capoeira is the only martial art of the African Diaspora that is known and practiced worldwide. Writing on Capoeira has rapidly grown in a number of disciplines, leading to the constitution of its own interdisciplinary field of study.

Second spell as a constructor (1979–1985)

Commercial partnership with Sauber (2019–2023)

Article Talk

From Wikipedia, the free encyclopedia

Italian motor manufacturer Alfa Romeo has participated multiple times in Formula One. The brand has competed in motor racing as both a constructor and engine supplier sporadically between 1950 and 1987, and later as a commercial partner between 2015 and 2023. The company's works drivers won the first two World Drivers' Championships in the pre-war Alfetta: Nino Farina in 1950 and Juan Manuel Fangio in 1951. Following these successes, Alfa Romeo withdrew from Formula One.

During the 1960s, although the company had no official presence in the top tier of motorsport, several Formula One teams used independently developed Alfa Romeo engines to power their cars. In the early 1970s, Alfa provided Formula One support for their works driver Andrea de Adamich, supplying adapted versions of their 3-litre V8 engine from the Alfa Romeo Tipo 33/3 sports car to power Adamich's McLaren (1970) and March (1971) entries. None of these engine combinations scored championship points.

Meet the Texas teen with the world's longest legs

Mesi Dunn was in elementary school when her doctors predicted she'd grow up to be 6 feet, 4 inches tall as an adult. She shot past that estimate in 7th grade.

Now a high school senior and standing 6 feet, 10 inches tall, Dunn has been recognized by Guinness World Records as being both the woman and the teen with the world's longest legs. They make up 60% of her total height.

THE RAPES IN BOSNIA: A MUSLIM SCHOOLGIRL'S ACCOUNT

By Peter Maass

December 26, 1992 at 7:00 p.m. EST

Share Save

ZENICA, BOSNIA -- Before the local Serb warlord took Mersiha away from her apartment to rape her on June 9, he told her not to cry. Mersiha, a Muslim schoolgirl, would be safe with him.

Then, Mersiha, 17, said in a lengthy interview here, the Serb ordered her, her 15-year-old sister and an 18-year-old friend into a car and drove them to a motel in their home town of Visegrad. The notorious Bosnian Serb White Eagle militia had just seized Visegrad, and Mersiha sensed in a terrifying instant that the victors were going to treat women as spoils of war.

Sahih al-Bukhari ▸ Military Expeditions led by the Prophet (pbuh) (Al-Maghaazi) - كتاب المغازى

Narrated Abu `Uthman:

I heard from Sa`d, the first man who has thrown an arrow in Allah's Cause, and from Abu Bakra who jumped over the wall of the Ta'if Fort along with a few persons and came to the Prophet. They both said, "We heard the Prophet saying, " If somebody claims to be the son of somebody other than his father knowingly, he will be denied Paradise (i.e. he will not enter Paradise).' " Narrated Ma`mar from `Asim from Abu Al-`Aliya or Abu `Uthman An-Nahdi who said. "I heard Sa`d and Abu Bakra narrating from the Prophet." `Asim said, "I said (to him), 'Very trustworthy persons have narrated to you.' He said, 'Yes, one of them was the first to throw an arrow in Allah's Cause and the other came to the Prophet in a group of thirty-three persons from Ta'if.'

Hundreds of New Testaments torched in Israel

STORY HIGHLIGHTS

- Israeli police to probe recent burning of New Testaments in Or-Yehuda
- Deputy mayor admits collecting "Messianic propaganda," but did not support burning
- Anti-Defamation League, other groups criticize burning

By Mark Bixler
CNN

(CNN) -- Police in Israel are investigating the burning of hundreds of New Testaments in a city near Tel Aviv, an incident that has alarmed advocates of religious freedom.

Investigators plan to review photographs and footage showing "a fairly large" number of New Testaments being torched this month in the city of Or-Yehuda, a police spokesman, Micky Rosenfeld, said Wednesday.

News accounts in Israel have quoted Uzi Aharon, the deputy mayor of Or-Yehuda, as saying he organized students who burned several hundred copies of the New Testament. The deputy mayor gave interviews to Israeli radio and television stations after word of the incident surfaced about two weeks ago.

Soon he was talking with Russian, Italian and French television stations, "explaining to their highly offended audiences back home how he had not meant for the Bibles to be burned, and trying to undo the damage caused by the news (and photographs) of Jews burning New Testaments," The Jerusalem Post reported.

Aharon told CNN on Wednesday that he collected New Testaments and other "Messianic propaganda" that had been handed out in the city but that he did not plan or organize a burning. Instead, he said, three teenagers set fire to a pile of New Testaments while he was not present. Once he learned what was going on, he said, he stopped the burning.

The episode has worried defenders of Israel's minority population of Messianic Jews, who consider themselves Jewish but believe in the divinity of Jesus, as do Christians. It also has concerned evangelical Christians in North America, Europe and Asia, who visit Israel by the hundreds of thousands.

Calev Myers, an attorney for Messianic Jews in Israel, told CNN he plans to file a formal complaint Thursday with the national police at the request of the United Christian Council in Israel, an umbrella organization for a few dozen Christian organizations outside Israel.

"I hope the people who are responsible for breaking the law will be indicted and prosecuted," he said.

About 200 New Testaments were burned, Aharon said, but he saved another 200.

His goal was to stop attempts to distribute Christian literature in the city, he said.

Myers, however, said he doubts that Messianic Jewish missionaries distributed the New Testaments. He said it's not clear how the volumes found their way into homes in Or-Yehuda.

The deputy mayor told CNN he respects the New Testament and would not do what has been done to the Jews in the past -- a reference to Nazi burning of Jewish and other books in the 1930s, and other occasions when Jewish texts, including sacred ones, were burned.

Myers said his complaint will ask the authorities to investigate possible violations of two Israeli laws. One forbids the destruction or desecration of any religious icon or item that a group holds sacred. Another bans

Kosher Porn Hardcover – September 30, 2014

by Sarah Rosen (Author)

4.6 ★★★★½ 27 ratings — See all formats and editions

Based on the popular blog, Porn4Jews, *Kosher Porn* marries traditional Jewish values with hilarious modern-day memes.

Shalom! If you came here in search of pornography, we suggest that you quietly step away and continue your search elsewhere. But, if Hebrew-speaking, challah-eating mensches turn you on, then Mazel Tov! Your prayers have been answered. This kind of "porn" is nudity-free, 100 percent kosher-certified, and, if we did our job right -- pretty damn funny. In other words, this porn is marriage material. This collection of photos paired with hilarious captions is the perfect gift book for Jews this Hanukkah season or any time of year. L'chaim!

SCOTT HASSAN

Benefactor of the Global Learning XPRIZE

Scott Hassan created Suitable Technologies with the goal of redefining presence, by giving people the power to choose when and where to be present, regardless of geographic location. Prior to Suitable, Scott founded Willow Garage, combining his belief in open source technology and his passion for bringing robotics into everyday life. Scott has been a driving force behind some of the most influential Internet companies and projects. He was the founder of eGroups (now Yahoo! Groups) and was the key software architect and developer of Google, Alexa Internet and the Stanford Digital Library. Scott invests in start-ups that aim to make fundamental quality of life improvements for citizens around the world.

Water-raising machines [edit]

Al-Jazari invented five machines for raising water,[1] as well as watermills and water wheels with cams on their axle used to operate automata,[34] in the 12th and 13th centuries, and described them in 1206. It was in these water-raising machines that he introduced his most important ideas and components.

al-Jazari's hydropowered saqiya chain pump device.

Saqiya chain pumps [edit]

The first known use of a crankshaft in a chain pump was in one of al-Jazari's saqiya machines. The concept of minimizing intermittent working is also first implied in one of al-Jazari's *saqiya* chain pumps, which was for the purpose of maximising the efficiency of the saqiya chain pump. Al-Jazari also constructed a water-raising saqiya chain pump which was run by hydropower rather than manual labour, though the Chinese were also using hydropower for chain pumps prior to him. Saqiya machines like the ones he described have been supplying water in Damascus since the 13th century up until modern times,[35] and were in everyday use throughout the medieval Islamic world.[36] Interestingly, the depiction of the chain in al-Jazari's pump appears to be in the form of a Möbius strip, from long before the Möbius strip was first identified as an object of study in mathematics.[37]

Double-action suction pump with valves and reciprocating piston motion [edit]

Citing the Byzantine siphon used for discharging Greek fire as an inspiration,[38] al-Jazari went on to describe his version of suction pipes, suction pump, double-action pump, and made early uses of valves and a crankshaft-connecting rod mechanism, when he developed a twin-cylinder reciprocating piston suction pump. This pump is driven by a water wheel, which drives, through a system of gears, an oscillating slot-rod to which the rods of two pistons are attached. The pistons work in horizontally opposed cylinders, each provided with valve-operated suction and delivery pipes. The delivery pipes are joined above the centre of the machine to form a single outlet into the irrigation system. This water-raising machine had a direct significance for the development of modern engineering. This pump is remarkable for three reasons:[9][39][40][41]

- The first known use of a true suction pipe (which sucks fluids into a partial vacuum) in a pump.
- The first application of the double-acting principle.
- The conversion of rotary to reciprocating motion via the crank-connecting rod mechanism.

Al-Jazari's suction piston pump could lift 13.6 metres of water,[*citation needed*] with the help of delivery pipes. It was not, however, any more efficient than the noria commonly used by the Muslim world at the time.[42]

Water supply system [edit]

al-Jazari developed the earliest water supply system to be driven by gears and hydropower, which was built in 13th century Damascus to supply water to its mosques and Bimaristan hospitals. The system had water from a lake turn a scoop-wheel and a system of gears which transported jars of water up to

Lawrence Livermore's National Ignition Facility (NIF) conducts research in the high-energy-density realm of physics. NIF helps Livermore carry out its stockpile stewardship mission, enabling the Laboratory to ensure the nuclear deterrent's safety, security, reliability, and effectiveness. Experiments at NIF are also laying the groundwork to advance the nation's energy security by demonstrating the feasibility of nuclear fusion as a clean source of energy.
Dr. Tammy Ma is a plasma physicist at NIF. She leads experiments aimed at achieving fusion ignition by using NIF's 192 laser beams to compress fuel capsules containing deuterium and tritium (isotopes of hydrogen) in a process called inertial confinement fusion (ICF). The goal is to achieve sustained thermonuclear fusion, where the fuel fuses into heavier elements, and many times more energy is released than it took to initiate the reaction. The scientific and engineering challenges are vast, but the potential to produce abundant clean energy, as well as to better understand the physics of a process that powers all the stars in the universe is irresistible.
"What I love about working at Livermore is that we do science with a purpose. Whether it's national security, or energy research, or climate change, it all has an angle that's actually achievable and has real significance," says Ma. "You bring together great people to work on difficult projects...It's not one single scientist in his or her own little lab that can figure it all out. You need big teams and a lot of resources and you need support from the scientific community and the government, and you get all that here. Hopefully what we do has a positive impact on society and human life."
Ma earned her bachelor's degree in aerospace engineering from Caltech in 2005, then received her master's degree in 2008, and Ph.D. in 2010, both from the University of California, San Diego. Ma always knew that LLNL was one of the most exciting places to be—she wanted to work with the biggest, most energetic laser in the world, to help push the frontiers of fusion research.
Following graduate school, she completed a postdoc at LLNL before becoming a staff scientist in 2012. Ma was recently awarded the Presidential Early Career Award for Science and Engineering, the highest honor bestowed by the United States government on early-career science and engineering professionals. She also received the American Physical Society 2016 Thomas H. Stix Award for Outstanding Early Career Contributions to Plasma Physics Research.
Early Career Research Award
Tammy Ma has been named a 2018 recipient of a prestigious Early Career Research Program award from the Department of Energy's Office of Science. The program is designed to bolster the nation's scientific workforce by providing support to exceptional researchers during the crucial early career years, when many scientists do their most formative work. Under the program, Ma will receive a total of $2,500,000 over five years for her proposal, "Multi-ps short-pulse laser-driven particle acceleration for novel HED and ICF applications."

Acrobatics

Page Talk

From Simple English Wikipedia, the free encyclopedia

See the main article: Gymnastics

Acrobatics (Latin: *akrobateō* — climb upward) is usually understood as

- a kind of physical exercises;
- a kind of performing arts;
- a sport.

Acrobatics requires extraordinary balance, agility, flexibility, control, concentration and motor coordination. A person who performs acrobatics is called an acrobat. Acrobatic skills were known in ancient Egypt, Greece, Rome and China. In the 19th century, acrobatic performance became popular in circuses of Europe. In the 20th century it became an organized sport with leagues and championships.

with legs stretched, with one player's feet on top of the toes of the other. If the third player managed to jump over that barrier, the two sitting players placed their palms on top of their feet to heighten the barrier which the third player had to jump across without touching.
This game is still practiced in the Egyptian countryside and is called "goose steps".

Swimming

Swimming was the favorite sport of the ancient Egyptians, who made use of the River Nile to practice it. The Nile was not the only place for swimming contests. Noblemen's palaces had swimming pools in which princes learnt the sport. The calm waters of the Nile encouraged youths to hold swimming competitions in which they could show their skills.

Rowing

Rowing was one of the sports that required most physical strength on the part of the ancient Egyptian. Plates recorded team-rowing in which the players depended on harmonizing their rowing according to the directives of their leader who held the rudder. The leader also controlled their movement through a high-pitched systematic call to unify the moment when oars touched the surface of the water and that helped to push the boat forward more steadily and swiftly - a method still being adopted in rowing nowadays.

Gymnastics (floor exercise)

The ancient Egyptians invented many sports, some for entertainment, and others for keeping strong, physically fit, and slim.
The picture dates back to 2000 years BC. It shows a gymnastics drill in which the body is bent backwards until the hand s touch the ground, revealing bodily flexibility. It is one of the most commonly practiced exercises today.

Rhythmic Gymnastics

The picture shows four players performing rhythmic gymnastics in different positions. The one on the left stands on one foot, stretching his two arms horizontally, and lifting one leg as high as possible to the front to help him revolve swiftly and lightly.
The two players in the middle are standing facing each other, bending their arms near their shoulders while twisting their waists towards the left and right.
The fourth player stands on his head upside down in perfect equilibrium, without touching the floor with his arms. All these positions are close to some practiced in today's rhythmic gymnastics.

Javelin Throw

Javelin throwing during the Pharaonic age was first linked to hunting. Drawings show how the hunter could hit his prey by one single throw despite its speed. The javelin differed in length according to the kind of prey. The javelin is thrown upwards lightly so that it revolves in quick spins until it returns to the player to be used again. The javelin is a stick with a twisted end. The picture shows the player in a position of readiness to throw.

Fishing

Fishing was one of the sports practiced by kings, princes and commoners. There are many drawings of scenes of fishing as a hobby on the Saqqara tombs of the Old Kingdom as much as there are on the New Kingdom monuments.
The Egyptian Museum in Cairo comprises numerous kinds of fishing rods and hooks of various shapes, which indicate the advance of such a sport in ancient Egypt.

Boxing

Some ancient Egyptian scenes of boxing as a game were found in the tomb of "Mery Ra" in the Minia Governorate and in the "Ptah Hotep" tomb in Saqqara. In this picture, a player is depicted in a position ready to direct his blows with his fist to another player, who in turn, tries to repel these blows. Pharaohs and princes watched the boxing match, which indicates that it was an organized contest.

Weightlifting

Weightlifting was one of the sports known by the ancient Egyptians. One method of weightlifting was the attempt to lift a heavy sack of sand with one hand (clean and jerk lift) and keep it high in a quasi-vertical position. The player had to stay in that position for a short period. This is one of the rules of weightlifting applied till now.

High Jump

Ancient Egyptians practiced field and track sports such as the high jump. Two players sat opposite each other with legs stretched, with one player's feet on top of the toes of the other. If the third player managed to jump over that barrier, the two sitting players placed their palms on top of their feet to heighten the barrier which the third player had to jump across without touching.
This game is still practiced in the Egyptian countryside and is called "goose steps".

Drawings on pharaonic monuments tell us that several thousand years ago, the Egyptians had laid down basic rules for games, chosen a neutral referee, a uniform for players, and a means of announcing the winners by awarding them different collars.

Both winner and loser were met with ovation, the first for his superiority and the latter for his sporting spirit.

Hockey

Ancient Egyptians played a game that is similar to our present-day hockey. Drawings on tombs at Beni Hassan in Menia Governorate show players holding bats made of long palm-tree branches, with a bent end similar to that of the hockey bat. The hockey ball was made of compressed papyrus fibers covered with two pieces of leather in the shape of a semicircle. The ball was dyed in two or more colors.

Handball

Drawings of this sport are found on the Saqqara tombs, five thousand years old. The ball was made of leather and stuffed with plant fibers or hay, or made of papyrus plants in order to be light and more durable. It was seldom used for more than one match.
The painting shows four girls playing handball. Each team throws the ball to the other at the same time. Players can either be on their feet or on top of their teammates' backs while exchanging balls.

Archery

Archery was a well-known sport in Ancient Egypt and was often recorded on plates in ancient temples. These plates show the kings' and princes' skill in accurate aiming at the target, and their strength in pulling the bow. Archery competitions were common. In the 21st century BC King Amenhotep II boasted that he pierced the middle of a thick brass target with four arrows. He then set a prize for anyone who could do the same.

Gymnastics: Consecutive Vault

This painting represents pharaonic gymnastics. The players performed consecutive vaults without touching the floor with their heads and making more than one complete turn in the air.
At the end of the exercise the players stand firmly upright, which is one of the basic rules of floor exercise applied in today's Olympics.

This game is still practiced in the Egyptian countryside and is called "goose steps".

Drawings on pharaonic monuments tell us that several thousand years ago, the Egyptians had laid down basic rules for games, chosen a neutral referee, a uniform for players, and a means of announcing the winners by awarding them different collars.

Both winner and loser were met with ovation, the first for his superiority and the latter for his sporting spirit.

Hockey

Ancient Egyptians played a game that is similar to our present-day hockey. Drawings on tombs at Beni Hassan in Menia Governorate show players holding bats made of long palm-tree branches, with a bent end similar to that of the hockey bat. The hockey ball was made of compressed papyrus fibers covered with two pieces of leather in the shape of a semicircle. The ball was dyed in two or more colors.

Handball

Drawings of this sport are found on the Saqqara tombs, five thousand years old. The ball was made of leather and stuffed with plant fibers or hay, or made of papyrus plants in order to be light and more durable. It was seldom used for more than one match.
The painting shows four girls playing handball. Each team throws the ball to the other at the same time. Players can either be on their feet or on top of their teammates' backs while exchanging balls.

Archery

Archery was a well-known sport in Ancient Egypt and was often recorded on plates in ancient temples. These plates show the kings' and princes' skill in accurate aiming at the target, and their strength in pulling the bow. Archery competitions were common. In the 21st century BC King Amenhotep II boasted that he pierced the middle of a thick brass target with four arrows. He then set a prize for anyone who could do the same.

Gymnastics: Consecutive Vault

This painting represents pharaonic gymnastics. The players performed consecutive vaults without touching the floor with their heads and making more than one complete turn in the air.
At the end of the exercise the players stand firmly upright, which is one of the basic rules of floor exercise applied in today's Olympics.

twisting their waists towards the left and right.
The fourth player stands on his head upside down in perfect equilibrium, without touching the floor with his arms. All these positions are close to some practiced in todar's rhythmic gymnastics.

Tug of Hoop

This is an ancient Egyptian game in which two players compete in pulling the hoop swiftly. Each contestant fixes a hooked staff to hinder any snatch of the hoop by the other player. This game needs sharp physical maneuvers and strict observation, particularly because the hooked staff is used both to pull the hoop and support it from falling flat on the floor.

Marathon

Marathon races were of the utmost importance in ancient Egypt, particularly during celebrations marking the assumption of power of new kings. One of the rituals of these celebrations was to hold a marathon run by the king around the temples before spectators to reveal his physical strength and his ability to rule using his bodily as well as mental capabilities.

History records that the Pharaoh, together with those who were born on the same day of his birth, participated in hectic marathons. No one was allowed to have a meal before covering 180 stages of his race.

Ancient Egyptian Stone-Drilling

An Experimental Perspective on a Scholarly Disagreement

BY LEONARD GONZALEZ AND A. JOHN GORNETT | Originals Published in 1983 | View PDF

More than most technical procedures in the ancient world, drilling of hard stone such as quartz and granite has evoked awe and puzzlement. Neither wall paintings, nor textual information, nor excavated material has provided complete answers as to how drilling was done. As a consequence, there has been scholarly controversy. One such disagreement occurred between two eminent Egyptologists, A. Lucas and Sir Flinders Petrie. Their argument revolved around a difficult and important question, namely, how did the ancient Egyptians of the 3rd millennium B.C. drill granite?

This unresolved question, raised by Petrie as early as 1883, is important not only to Egyptologists, but to scholars of ancient lapidary technology anywhere in the world where hard stone was drilled. Here, we report on our preliminary experiments directed toward a resolution of this controversy. The reader must bear in mind that our work is based solely upon the evidence of the object examined, and does not take into account ancient Egyptian textual or material evidence that might shed light upon this problem.

The disagreement between Lucas and Petrie can be most accurately summarized by alternately juxtaposing their own words written over a 35-year period.

Lucas:

"...as neither copper nor bronze is sufficiently hard to cut such stones as basalt, diorite, granite, quartzite and schist, a harder material than the metal is required to do the work which must have been used either in the form of (fixed) cutting points (teeth) or as a loose (abrasive) powder .... In my opinion, it was a loose abrasive powder (of) finely ground quartz sand used wet ... loose quartz sand which occurs in great abundance in Egypt and will abrade quartz ... which was the hardest stone the ancient Egyptians worked."

Petrie:

HEART SPECIALIST DR. MICHAEL DEBAKEY, C. 1994.

Born in Lake Charles, Louisiana in 1908 to Lebanese immigrants, Michael DeBakey (the Anglicized form of *Debaghi*) grew up spending time in his father's pharmacy and enjoyed sewing, gardening and learning how motors and other machinery work. He earned his medical degree in 1932 and served in the Surgical Consultants Division of the Army Surgeon General's Office from 1942 to 1946.

It was during this time that DeBakey and his colleagues developed special units dedicated to providing surgical care to soldiers wounded near the front lines. They were first deployed in 1943, though are best known for their work during the Korean and Vietnam conflicts, when they were known as the Mobile Auxiliary Surgical Hospital (MASH) units.

DeBakey's surgical contributions continued for the next several decades and included performing the first successful removal of a blockage of the carotid artery (1953), developing the concept behind coronary bypass surgery (1963), pioneering the field of telemedicine with the first demonstration of open-heart surgery transmitted overseas via satellite (1965), and being the first to use a partial artificial heart (1966).

According to one story, the first circus was staged by Ptolemy II Philadelphus, king of Egypt from 285 to 246 BC, who gathered animals, birds and reptiles from Africa and the Middle East and put them on parade for his people on days of celebration.

Next year, to celebrate the national circus' 20th anniversary, the Ministry of Culture is planning an international festival and will ask 35 countries to compete in a circus competition.

Why will there be no other Arabic circuses there?

In the conservative Islamic countries, the idea of a woman performing in a leotard and barelegged would be abhorrent, as would sexually integrated audiences. Security-conscious governments might also be wary of approving events that attract crowds, as a circus does. And in many other countries of this region, there is simply no tradition of humor as an art form--and little culture other than that of the desert heritage.

"The Egyptians are the only Arabs who would understand the value of laughter and having fun," said one observer.

The art of juggling has existed in various cultures throughout history. The beginning is uncertain. The first depictions were found in ancient Egypt, China, Greece, and Rome, as well as medieval and modern societies.

Ancient Egypt [edit]

The earliest record of tossa juggling is a painting on the wall of Tomb 15 in Egypt's Beni Hasan cemetery complex. This tomb belonged to Baqet III, a provincial governor of Menat-Khufu (present day Minya) during the later years of the Eleventh Dynasty of Egypt.[1] It depicts female dancers and acrobats juggling up to three balls, and one of the girls juggling with her arms crossed.

In another Beni Hasan painting, four girls are playing a juggling game in which two girls throw and catch a ball while being carried on the backs of the others. Arthur Watson, in his 1907 article for The Reliquary and Illustrated Archaeologist, suggests that if a player dropped the ball in this game, it became that player's turn to become the bearer.[1]

This Egyptian wall painting from the wall of Tomb 15 at Beni Hasan appears to depict tossa jugglers.

Brooklyn Museum associate curator Dr. Robert Bianchi suggests that the appearance of jugglers in the Beni Hassan tomb may be "an analogy between balls and circular mirrors, as round things were used to represent solar objects, birth and death."[1]

ANCIENT JUGGLING TOMBS – PART 1

September 10, 2020

(Haz clic aquí para español.)

One of the oldest representations of juggling dates from 1994 – 1781 BC, in the tombs at Beni Hasan. Due to the time that has passed and the little documentation that there is in this regard, researching before Christ juggling is a never-ending job. These investigations require deepening in disciplines such as archaeology, history, anthropology. It is not easy to unveil a new discovery about the ancient history of juggling. However, prominent juggling historians and researchers such as David Cain, Eric Åberg, Thom Wall, and others have provided us with invaluable data. All my admiration for them.

For my part, I did my homework to research some BC juggling tombs, and I was able to find some interesting things that I will share with you below.

In many articles on juggling history, the images on the tombs of Beni Hasan are discussed, saying that it was an Egyptian prince who marked his tomb with depictions of juggling. Beni Hasan is not actually a prince; it is the name of a town in Middle Egypt on the eastern bank of the Nile River where a necropolis is found, and there lie the remains of governors, monarchs and pharaohs.

For other uses, see Circassian (disambiguation).

Circassians, also called **Cherkess** or **Adyghe** (Adyghe and Kabardian: Адыгэ; romanized: Adygeiher) are an indigenous Northwest Caucasian ethnic group and a nation, native to the historical country-region of Circassia in the North Caucasus.[1][2] As a consequence of the Circassian genocide perpetrated by the Russian Empire in the 19th century during the Russo-Circassian War, most Circassians were exiled from their homeland in Circassia to modern-day Turkey and the rest of the Middle East, where most of them are today.[3][4] In the early 1990s, the Unrepresented Nations and Peoples Organization estimated that there are as many as 3.7 million Circassians in diaspora in over 50 countries.[5]

The Circassian language is the ancestral language of the Circassian people,[6][7] and Islam has been the dominant religion among them since the 17th century.[8][9] Circassia has been repeatedly invaded since ancient times; its isolated terrain coupled with the strategic value external societies have placed on the region have greatly shaped the Circassian national identity.[10]

The Circassian flag consists of a green field charged with 12 gold stars and, in the center, three crossed arrows. The stars represent the 12 historical Circassian provinces: the Abzakh, the Besleney, the Bzhedugh, the Hatuqway, the Kabardians, the Mamkhegh, the Natuhaj, the Shapsugh, the Chemirgoy, the

From Wikipedia, the free encyclopedia

Italian motor manufacturer Alfa Romeo has participated multiple times in Formula One. The brand has competed in motor racing as both a constructor and engine supplier sporadically between 1950 and 1987, and later as a commercial partner between 2015 and 2023. The company's works drivers won the first two World Drivers' Championships in the pre-war Alfetta: Nino Farina in 1950 and Juan Manuel Fangio in 1951. Following these successes, Alfa Romeo withdrew from Formula One.

During the 1960s, although the company had no official presence in the top tier of motorsport, several Formula One teams used independently developed Alfa Romeo engines to power their cars. In the early 1970s, Alfa provided Formula One support for their works driver Andrea de Adamich, supplying adapted versions of their 3-litre V8 engine from the Alfa Romeo Tipo 33/3 sports car to power Adamich's McLaren (1970) and March (1971) entries. None of these engine combinations scored championship points.

Highest Mileage Ram Truck In The World In 2024

Surpassing the one million-mile milestone is already an astounding feat for a truck owner, but crossing the two million-mile mark is next-level stuff.

BY ANTONIO ANDREANI PUBLISHED APR 8, 2024

Bring a Trailer

SUMMARY

- RAM trucks are gaining ground against competitors like Toyota, showcasing remarkable feats of durability and reliability in the long run.
- Cummins engines play a key role in achieving high-mileage benchmarks, as showcased by RAM truck owners surpassing a million miles.
- Regular maintenance, dedicated mechanics like Forest Cunningham, and the trust in the 5.9-liter Cummins engine contribute to the longevity of RAM trucks.

When Egyptian siblings Mohamed and Huda Shehata broke five combined Guinness world records this week, they were excited at the prospect of some relief from the grinding poverty of their daily lives.

In a world of 8 billion people, it can be hard to stand out from the crowd.

It sometimes takes persistence or creativity to get your hands on a Guinness World Records certificate that recognises your achievement.

However, some people are born with their talents and features and achieve recognition thanks to their incredible human form.

This is the case for siblings Mohamed and Huda Shehata (both Egypt).

X-43A Flight Makes Aviation History
NASAFacts
A modified Pegasus booster rocket (pictee moments after release from the B-52B, beginning the acceleration of the X-43A over the Pacific Ocean in March of 2004. The X-43A vehicle is mounted on the nose of the rocket.
NASA made aviation history with the first and second successful flights of a scramjet-powered airplane at hypersonic speeds– speeds greater than Mach 5 or five times the speed of sound. Compared to a rocket-powered vehicle like the Space Shuttle, scramjet (supersonic combustion ramjet) powered vehicles promise more airplane-like operations for increased affordability, flexibility and safety for ultra high-speed flights within the atmosphere and into Earth orbit. Because they do not have to carry bulky oxygen tanks, as rockets must, vehicles powered by air-breathing scramjets can be smaller and lighter.
Researchers have worked for decades to demonstrate scramjet technologies, first in wind tunnels and computer simulations, and now in an airplane in flight. Ultimate applications include future hypersonic missiles, hypersonic airplanes, the first stage of two-stage-to-orbit reusable launch vehicles and single-stage-to-orbit reusable launch vehicles.
High-Risk, High-Payoff Program
The eight-year, approximately $230 million NASA Hyper-X program was a high-risk, high-payoff research program. It undertook challenges never before attempted. No vehicle powered by an air-breathing engine had ever flown at hypersonic speeds before the successful March 2004 flight. In addition, the rocket boost and subsequent separation from the rocket to get to the scramjet test condition had complex elements that had to work properly for mission success. Careful analyses and design were applied to reduce risks to acceptable levels, even so, some level of residual risk was inherent to the program.

Better designs for the future of hypersonic flight
In the 1960s, an improved ramjet was devised in which the burner could function supersonically. The modified ramjet, or scramjet, minimizes the losses due to the shock wave flow loss allowing the engine to produce enough thrust for hypersonic travel or speeds up to Mach 15.
Since the scramjet uses external air to power the combustor, it is much more efficient than a rocket, which must carry all of its oxygen on board. Scramjets are optimized for hypersonic flight and will not function at speeds below Mach 3, requiring a rocket to accelerate it up to critical engine stall speeds.

TAMPA, Fla. (WFLA) – A former Massachusetts resident who built a dungeon inside his home and plotted to torture and eat children has asked a judge to order his release from prison because he is at high risk of contracting the coronavirus.

Boston 25 reports Geoffrey Portway filed a motion for compassionate release, citing the more than 40 cases of coronavirus in his prison.

In a handwritten letter, Portway said he was at higher risk of becoming infected because he is obese and asked t[illegible] sent back to England, where he is from.

For Immediate Release

U.S. Attorney's Office, Eastern District of Missouri

ST. LOUIS – A man from St. Louis on Wednesday admitted possessing and sharing child pornography and fleeing from St. Louis while on house arrest.

Daniel Bert, 38, pleaded guilty to a felony charge of transportation of child pornography. He admitted that after receiving two tips about Bert, the FBI discovered he was discussing his sexual interest in young children on Kik Messenger. An undercover FBI special agent began communicating with Bert on another app, Wickr, and Bert sent a picture of his genitals to the agent. He also expressed his sexual interest in young children, his plea agreement says. In text messages, Bert told the agent that he had a hard drive full of child pornography. On the same day that agents obtained a search warrant for Bert's home, Bert asked the undercover agent to join him in an online video chat during which Bert played videos containing child pornography.

This article is about the cult leader. For other people with the same name, see David B (disambiguation).

David Brandt Berg (February 18, 1919 – October 1, 1994), also known as **King David**, **Mo**, **Moses David**, **Father David**, **Dad**, or **Grandpa** to followers, was the founder and leader of the cult generally known as the Children of God[1] and subsequently as The Family International. Berg's group, founded in 1968 among the counterculture youth in Southern California, gained notoriety for incorporating sexuality into its spiritual message and recruitment methods. Berg and his organization were accused of a broad range of sexual misconduct, including child sexual abuse.

Life [edit]

Family heritage [edit]

Berg's maternal grandfather was John Lincoln Brandt (1860–1946), a Disciples of Christ minister, author, and lecturer of Muskogee, Oklahoma.[2] Brandt had a dramatic conversion in his mid-twenties and immediately entered full-time Christian service. For years he was a Methodist circuit rider. He later became a leader of the Alexander Campbell movement of the Disciples of Christ, a restoration movement that developed into the current Protestant denomination Christian Church (Disciples of Christ).[3]

Early years (1919–1969) [edit]

Berg was born on February 18, 1919, in Oakland, California.[4] During his early years, he u lived in or around Florida.[5]

He was the youngest of three children born to Hjalmar Emmanuel Berg and Virginia Lee B Christian evangelists.[6] His father was Swedish.[7]

Virginia and Hjalmar were expelled from the Disciples of Christ after publicly testifying of h healing, which was contrary to church doctrine. They subsequently joined a new denomina Christian and Missionary Alliance, shortly before David's birth. In later years, their missiona and disdain for denominational politicking often set them at variance with the conservative that church's hierarchy, causing them to work largely as independent pastors and evangeli

Berg spent his early years traveling with his parents, who pursued their evangelical missio they settled in Miami, Florida, after Virginia successfully led a series of large revivals at the

Trigger warning: child abuse, suicide

A survivor of one of the most controversial cults shared her harrowing experiences, highlighting the religious movement's exploitation of children, her advocacy against extremism, and the psychology behind cults

36-year-old Daniella Mestyanek Young detailed the abuse she suffered as a child growing up in the Children of God cult, exposing how the so-called "free love" ideals of the group promoted the sexual abuse of children.

Daniella escaped what has been labeled a "sex cult" at 15 and has since been working as a self-described "scholar of cults, extreme groups, and extremely bad leadership."

In a bombshell exposé with The Sun, published on Sunday (March 10), Daniella, a daughter of high-ranking members who was shuffled between compounds in the US, Mexico, and Brazil, explained that when the cult was in its prime, it brought in hundreds of millions of dollars, adding that her grandfather — a senior leader — "still runs the money."

In 1968, former priest David Berg founded Teens for Christ, which evolved to become the infamous Children of God cult, characterized by allegations of rape, child abuse, and religious prostitution.

The Children Of God: 5 Disturbing Facts About The Pro-Pedophilia Sex Cult

The sect still exists online and reportedly has 1,500 members in 80 countries.

August 24, 2021

Members of the 'Children of God' cult [via Discovery, Inc.]

By: Aaron Rasmussen

David Brandt Berg, a charismatic preacher, formed The Children of God in 1968. He believed the apocalypse was near and urged believers to survive on basic necessities by giving up their money and personal possessions to the group's leaders. He also infamously taught that God is love and love is sex.

In 1974, a New York attorney general's office report labeled The Children of God a cult, and its members were accused of sexual abuse, assault, incest and other crimes, *The Guardian* reported.

In one instance, the report stated, "a 14-year-old runaway who spent nine days at a COG commune testified that she was raped and because of her refusal to cooperate with the elders, was held in solitary confinement on no less than three separate occasions."

Despite the accusations, The Children of God continued to flourish for decades. Berg changed the cult's name to The Family of Love following the 1978 Jonestown mass suicide, and, in 2004, the group became known as The Family International.

Ahead are five other facts about the cult that imploded just over 40 years after it

Hundreds of New Testaments torched in Israel

STORY HIGHLIGHTS

- Israeli police to probe recent burning of New Testaments in Or-Yehuda
- Deputy mayor admits collecting "Messianic propaganda," but did not support burning
- Anti-Defamation League, other groups criticize burning

Next Article in World »

By Mark Bixler
CNN

(CNN) -- Police in Israel are investigating the burning of hundreds of New Testaments in a city near Tel Aviv, an incident that has alarmed advocates of religious freedom.

Investigators plan to review photographs and footage showing "a fairly large" number of New Testaments being torched this month in the city of Or-Yehuda, a police spokesman, Micky Rosenfeld, said Wednesday.

News accounts in Israel have quoted Uzi Aharon, the deputy mayor of Or-Yehuda, as saying he organized students who burned several hundred copies of the New Testament. The deputy mayor gave interviews to Israeli radio and television stations after word of the incident surfaced about two weeks ago.

Soon he was talking with Russian, Italian and French television stations, "explaining to their highly offended audiences back home how he had not meant for the Bibles to be burned, and trying to undo the damage caused by the news (and photographs) of Jews burning New Testaments," The Jerusalem Post reported.

Aharon told CNN on Wednesday that he collected New Testaments and other "Messianic propaganda" that had been handed out in the city but that he did not plan or organize a burning. Instead, he said, three teenagers set fire to a pile of New Testaments while he was not present. Once he learned what was going on, he said, he stopped the burning.

The episode has worried defenders of Israel's minority population of Messianic Jews, who consider themselves Jewish but believe in the divinity of Jesus, as do Christians. It also has concerned evangelical Christians in North America, Europe and Asia, who visit Israel by the hundreds of thousands.

Calev Myers, an attorney for Messianic Jews in Israel, told CNN he plans to file a formal complaint Thursday with the national police at the request of the United Christian Council in Israel, an umbrella organization for a few dozen Christian organizations outside Israel.

"I hope the people who are responsible for breaking the law will be indicted and prosecuted," he said.

About 200 New Testaments were burned, Aharon said, but he saved another 200.

His goal was to stop attempts to distribute Christian literature in the city, he said.

Myers, however, said he doubts that Messianic Jewish missionaries distributed the New Testaments. He said it's not clear how the volumes found their way into homes in Or-Yehuda.

The deputy mayor told CNN he respects the New Testament and would not do what has been done to the Jews in the past -- a reference to Nazi burning of Jewish and other books in the 1930s, and other occasions when Jewish texts, including sacred ones, were burned.

Myers said his complaint will ask the authorities to investigate possible violations of two Israeli laws. One forbids the destruction or desecration of any religious icon or item that a group holds sacred. Another bans

Kosher Porn Hardcover – September 30, 2014

by Sarah Rosen (Author)

4.6 ★★★★☆ 27 ratings

See all formats and editions

Based on the popular blog, Porn4Jews, *Kosher Porn* marries traditional Jewish values with hilarious modern-day memes.

Shalom! If you came here in search of pornography, we suggest that you quietly step away and continue your search elsewhere. But, if Hebrew-speaking, challah-eating mensches turn you on, then Mazel Tov! Your prayers have been answered. This kind of "porn" is nudity-free, 100 percent kosher-certified, and, if we did our job right -- pretty damn funny. In other words, this porn is marriage material. This collection of photos paired with hilarious captions is the perfect gift book for Jews this Hanukkah season or any time of year. L'chaim!

Ma clique

12 languages

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

For the training group of Chinese track athletes, see Ma Junren.

The **Ma clique** or **Ma family warlords**[1] is a collective name for a group of Hui (Muslim Chinese) warlords in Northwestern China who ruled the Chinese provinces of Qinghai, Gansu and Ningxia for 10 years from 1919 until 1928. Following the collapse of the Qing dynasty in 1912, the region came under Chinese Muslim warlord Ma Qi's control until the Northern Expedition by the Republic of China consolidated central control in 1928. There were three families in the Ma clique ("Ma" being a common Hui rendering of the common Muslim name "Muhammad"), each of them respectively controlled, parts of Gansu, Ningxia and Qinghai. The three most prominent members of the clique were Ma Bufang, Ma Hongkui, and Ma Hongbin, collectively known as the **Xibei San Ma** (Chinese: 西北三馬, *Three Ma of the Northwest*). Some contemporary accounts, such as Edgar Snow's, described the clique as the "Four Ma" (rather than Three), adding Ma Bufang's brother Ma Buqing to the list of the top warlords.[2] Other prominent Ma's included Ma Anliang, Ma Qi, Ma Lin, Ma Hu-shan, and Ma Zhongying.

Ma Clique [edit]

The Ma Clique warlords were all generals in the military of the Republic of China, who controlled most of Mainland China until it was overtaken by the communist People's Liberation Army. The clique was begun by Muslim generals who served in the military of the Qing dynasty, most rotably in the Kansu Braves army, who fought in the Boxer Rebellion against invading foreign forces. It was continued by two generations of their descendants.

After the Xinhai Revolution overthrew the Qing, the Ma Clique Generals declared their allegiance to the Republic of China. Unlike the Mongols, Hui Muslims refused to secede from the Republic, and Ma Qi quickly used his diplomatic and military powers to make the Tibetan and Mongol nobles recognize the Republic of China government as their overlord, and sent a message to President Yuan Shikai reaffirming that Qinghai was securely in the Republic. He replaced "Long, Long, Long, Live the reigning Emperor", with "Long live the Republic of China" on inscriptions.[3] Ma Anliang also agreed to join the new Republic of China government.[4]

When the Kuomintang seized power in the Northern Expedition, the Ma Clique warlords became members of the Kuomintang party, and their armies were renamed as divisions of the National Revolutionary Army. The Ma Clique Ninghai Army under General Ma Qi was renamed the National Revolutionary Army 26th Division.

ABSTRACT

Following the 1911 Xinhai Rebellion, the new leadership began to stress the fundamental unity of the peoples of the new Republic of China, even as newspaper commentaries foretold the need for separate Muslim representation as the only way to buy the participation of that constituency in the new state. Influential Chinese Muslim military leaders controlled much of the northwest; their participation in the new state was crucial to its survival. However, whilst the legacies of a nineteenth century process of minoritization meant it was often

15 charged in Newark heroin distribution organization

Thursday, November 19, 2015

NEWARK, N.J. (WABC) -- Fifteen people were charged Thursday for their roles in a heroin distribution organization in Newark.

According to U.S. Attorney Paul J. Fishman, the group operated out of a building on Johnson Avenue. It sold millions worth of the drug.

Almalik Anderson and Quawee Jones, who are accused of being the leaders of the operation, are charged with engaging in a continuing criminal enterprise.

All 15 defendants are charged with one count each of

For Immediate Release

U.S. Attorney's Office, District of New Jersey

NEWARK, N.J. - An Essex County, New Jersey, man was sentenced today to 168 months in prison for his leadership role in a massive drug distribution ring responsible for selling millions of dollars' worth of heroin out of a residential building near a high school in Newark, U.S. Attorney Craig Carpenito announced.

Quawee Jones, a/k/a "Hatman," 34, of Newark, previously pleaded guilty before U.S. District Judge Jose L. Linares to a superseding information charging him with conspiracy to distribute heroin. Judge Linares imposed the sentence today in Newark federal court.

According to documents filed in the case and statements made in court:

Jones and his co-defendants operated a heroin distribution marketplace out of the first floor hallway of a residential building at 25 Johnson Avenue in Newark. The building is just a few doors away from the Malcolm X. Shabazz High School and the Terrell James Park playground. The conspiracy was led by Quawee Jones and Almalik Anderson, who, along with other heroin dealers that worked with them, took advantage of the building's location on a dead-end street, making it difficult for law enforcement to infiltrate the distribution network despite a constant stream of buyers entering the building at all hours of the day.

"Lookouts" were paid by the defendants to alert them to any police activity coming

From Wikipedia, the free encyclopedia

Scott Hassan is a computer programmer and entrepreneur who was the main programmer of the original Google Search engine, then known as BackRub. He was research assistant at Stanford University at the time. Hassan left before Google was officialy founded as a company.

In 1997 Hassan founded FindMail, later renamed to eGroups.com, an email list management web site. He owned 5.7% of eGroups in March 2000 when the company filed a Form S-1. eGroups was later bought by Yahoo! for $432m in August 2000 in a stock deal and became Yahoo! Groups.

In 2006 Hassan started Willow Garage, a robotics research lab and technology incubator. The organization created the open source robotics software suite ROS (Robot Operating System). Willow Garage shut down in early 2014.

Water-raising machines [edit]

Al-Jazari invented five machines for raising water,[1] as well as watermills and water wheels with cams on their axle used to operate automata,[34] in the 12th and 13th centuries, and described them in 1206. It was in these water-raising machines that he introduced his most important ideas and components.

Saqiya chain pumps [edit]

The first known use of a crankshaft in a chain pump was in one of al-Jazari's saqiya machines. The concept of minimizing intermittent working is also first implied in one of al-Jazari's saqiya chain pumps, which was for the purpose of maximising the efficiency of the saqiya chain pump. Al-Jazari also constructed a water-raising saqiya chain pump which was run by hydropower rather than manual labour, though the Chinese were also using hydropower for chain pumps prior to him. Saqiya machines like the ones he described have been supplying water in Damascus since the 13th century up until modern times,[35] and were in everyday use throughout the medieval Islamic world.[36] Interestingly, the depiction of the chain in al-Jazari's pump appears to be in the form of a Möbius strip, from long before the Möbius strip was first identified as an object of study in mathematics.[37]

Double-action suction pump with valves and reciprocating piston motion [edit]

Citing the Byzantine siphon used for discharging Greek fire as an inspiration,[38] al-Jazari went on to describe his version of suction pipes, suction pump, double-action pump, and made early uses of valves and a crankshaft-con developed a twin-cylinder reciprocating piston suction pump. This pump is driven by a water wheel, which drives, oscillating slot-rod to which the rods of two pistons are attached. The pistons work in horizontally opposed cylinde suction and delivery pipes. The delivery pipes are joined above the centre of the machine to form a single outlet i raising machine had a direct significance for the development of modern engineering. This pump is remarkable fo

- The first known use of a true suction pipe (which sucks fluids into a partial vacuum) in a pump.
- The first application of the double-acting principle.
- The conversion of rotary to reciprocating motion via the crank-connecting rod mechanism.

Al-Jazari's suction piston pump could lift 13.6 metres of water,[citation needed] with the help of delivery pipes. It was the noria commonly used by the Muslim world at the time.[42]

Water supply system [edit]

al-Jazari developed the earliest water supply system to be driven by gears and hydropower, which was built in 13 its mosques and Bimaristan hospitals. The system had water from a lake turn a scoop-wheel and a system of ge

JOAQUIN PHOENIX
JOKER
As Joker streams in the UK, Sean Alexander considers his Jewish origins.
DC Comics, like its rival Marvel, has long been acknowledged for its rich Jewish heritagein terms of the creation of its most iconic characters. While Batman himself was the co-creation of Jews Bob Kane and Bill Finger, it was another Jew – Jerry Robinson – who first introduced the Caped Crusader's most arch nemesis, the Joker.
Video unavailable
This video is restricted. Please check the Google Workspace administrator and/or the network administrator restrictions.
With Todd Phillips' origin story of Joker from last year now showing on Sky Cinema and Now TV, it would seem an appropriate time to explore in greater depth the enhanced Jewish aspects this latest film adaptation has yielded.
Director Phillips is himself Jewish, born Todd Bunzl, as is Joaquin Phoenix who portrays the title role. One of the clown colleagues of protagonist Arthur Fleck (Phoenix), Randall is played by the Jewish actor Glenn Fleshler.
Arthur Fleck lives in Gotham City, 'aka New York, circa 1981', and hence is basically Jewish. He resides, with his mother, in, what J. Hoberman called, 'a slum tenement on a grim street that's recognizably the Bronx. (Given his family name, he and his mother might be the last remnants of a once-Jewish neighborhood.)'
Fleck's surname itself has origins in the Ashkenazi word for 'spot' or 'patch'. Note how the German phrase 'gelber fleck' was the street slang for the yellow Star of David that the Nazis forced Jews to wear. Fleck is a suitable surname given how
Sean Alexander is a PhD Candidate at Bangor University, exploring Jewishness and Judaism in the films of David Cronenberg.

The pot de fer, known to the Arabs as midfa, was the ancestor of all subsequent forms of cannon. Materials evolved from bamboo to wood to iron quickly enough for the Egyptian Mamelukes to employ the weapon against the Mongols at the battle of Ain Jalut in 1260, which ended the Mongol advance into the Mediterranean world. A wooden cup on the end of the arrow trapped gas behind the projectile.

MAMLUK ENGINEER WITH MIDFA

A certain al-Hassan al-Rammah describes and illustrates the Midfa in a work of c. 1280-1290. It was clearly an early firearm, made of wood with a barrel only as deep as its muzzle width, used to fire Bunduks (?bullets) or feathered bolts. The charge filled a third of

Midfa, the Egyptian secret weapon used to defeat the Mongol army in the 13th century

Stephen Nartey | March 15, 2023

Hand cannon being used by a soldier/Photo credit: Wikipedia

In the 12th century, there was a wave of Christian crusaders determined to convert other religions and pagan worshipers into their folds. This campaign was spearheaded by the Mongol army, which was led by the Turk, Kitbuga. Their raid started with Syria in 1259 and swept through Damascus and Aleppo till the caravan made a stopover at the Mediterranean Sea. They had plans to take over Egypt's capital, Cairo, but decided to give the rulers an option to submit or be forced into submission. The Mongol envoy sent to Mamlūk sultan, al-Muẓaffar Sayf al-Dīn Quṭuz, returned with a strong warning from the Egyptian ruler, emphasizing they were not walkovers.

Still angered by the proposal of the Mongolian army, the Mumluks, led by Qutuz, waged a military expedition against the Mongolian forces in Gaza. They fought a Mongol army of 20,000 at Ain Jalut, which is also known as Goliath's spring. The leverage the Mamluks exercised over the Mongol army was due to army General Baybars' familiarity with the terrain since his teenage years when he was once held there as a fugitive. His strategy enabled the Mamluks to subdue the Mongol forces on the battlefield, according to Britannica.

The plan was to capitalize on one of the tactics of the Mongols where they feign interest in trapping their enemies. While the Mongols followed the bait, his army hid behind trees in wait to ambush the enemy forces. When their adversaries fell for the trick, the Mamluk army attacked them from all sides, leaving them with a heavy blow of assault from a sea of arrows. Though the Mongols fought hard and viciously, the Mumluks won the battle that day.

How Ramjets Work
By: Nicholas Gerbis | Updated: Apr 16, 2024
NASA engineer Laura O'Connor inspects a supersonic ramjet (scramjet) engine model at Langley Research Center in Hampton, Virginia.
© CORBIS
Key Takeaways
• A ramjet is a type of air-breathing jet engine that operates on the principle of compressing incoming air without the need for rotating parts.
• It relies on the high-speed forward motion of the aircraft to compress air, making it suitable for supersonic and hypersonic flight.
What's a brushing scam?

Guinness Recognizes NASA's X-43A Scramjet Speed Record
NASA
JUN 05, 2013
RELEASE
It's official. The new world speed record for a jet-powered aircraft, set by NASA in November, has been officially recognized by Guinness World Records.
The accomplishment, the third and final flight in the experimental X-43A project, demonstrated that an advanced form of air-breathing (jet) engine could power an aircraft at nearly 10 times the speed of sound. Data from the unpiloted, 12-foot-long research vehicle show that its revolutionary "scamjet" engine worked successfully at Mach 9.6 or nearly 7,000 mph, as it flew at about 109,000 feet over the Pacific Ocean west of California.
The flight was the culmination of NASA's Hyper-X Program, a

HEART SPECIALIST DR. MICHAEL DEBAKEY, C. 1994.

Born in Lake Charles, Louisiana in 1908 to Lebanese immigrants, Michael DeBakey (the Anglicized form of *Debaghi*) grew up spending time in his father's pharmacy and enjoyed sewing, gardening and learning how motors and other machinery work. He earned his medical degree in 1932 and served in the Surgical Consultants Division of the Army Surgeon General's Office from 1942 to 1946.

It was during this time that DeBakey and his colleagues developed special units dedicated to providing surgical care to soldiers wounded near the front lines. They were first deployed in 1943, though are best known for their work during the Korean and Vietnam conflicts, when they were known as the Mobile Auxiliary Surgical Hospital (MASH) units.

DeBakey's surgical contributions continued for the next several decades and included performing the first successful removal of a blockage of the carotid artery (1953), developing the concept behind coronary bypass surgery (1963), pioneering the field of telemedicine with the first demonstration of open-heart surgery transmitted overseas via satellite (1965), and being the first to use a partial artificial heart (1966).

According to one story, the first circus was staged by Ptolemy II Philadelphus, king of Egypt from 285 to 246 BC, who gathered animals, birds and reptiles from Africa and the Middle East and put them on parade for his people on days of celebration.

Next year, to celebrate the national circus' 20th anniversary, the Ministry of Culture is planning an international festival and will ask 35 countries to compete in a circus competition.

Why will there be no other Arabic circuses there?

In the conservative Islamic countries, the idea of a woman performing in a leotard and barelegged would be abhorrent, as would sexually integrated audiences. Security-conscious governments might also be wary of approving events that attract crowds, as a circus does. And in many other countries of this region, there is simply no tradition of humor as an art form—and little culture other than that of the desert heritage.

"The Egyptians are the only Arabs who would understand the value of laughter and having fun," said one observer.

From Wikipedia, the free encyclopedia

The art of juggling has existed in various cultures throughout history. The beginning is uncertain. The first depictions were found in ancient Egypt, China, Greece, and Rome, as well as medieval and modern societies.

Ancient Egypt [edit]

The earliest record of toss juggling is a painting on the wall of Tomb 15 in Egypt's Beni Hasan cemetery complex. This tomb belonged to Baqet III, a provincial governor of Menat-Khufu (present day Minya) during the later years of the Eleventh Dynasty of Egypt.[7] It depicts female dancers and acrobats juggling up to three balls, and one of the girls juggling with her arms crossed.

In another Beni Hasan painting, four girls are playing a juggling game in which two girls throw and catch a ball while being carried on the backs of the others. Arthur Watson, in his 1907 article for *The Reliquary and Illustrated Archaeologist*, suggests that if a player dropped the ball in this game, it became that player's turn to become the bearer.[8]

This Egyptian wall painting from the wall of Tomb 15 at Beni Hasan appears to depict toss jugglers.

Brooklyn Museum associate curator Dr. Robert Bianchi suggests that the appearance of jugglers in the Beni Hassan tomb may be "an analogy between balls and circular mirrors, as round things were used to represent solar objects, birth and death."[9]

ANCIENT JUGGLING TOMBS – PART 1

September 10, 2020

(Haz clic aquí para español.)

One of the oldest representations of juggling dates from 1994 – 1781 BC, in the tombs at Beni Hasan. Due to the time that has passed and the little documentation that there is in this regard, researching before Christ juggling is a never-ending job. These investigations require deepening in disciplines such as archaeology, history, anthropology. It is not easy to unveil a new discovery about the ancient history of juggling. However, prominent juggling historians and researchers such as David Caie, Eric Åberg, Thom Wall, and others have provided us with invaluable data. All my admiration for them.

For my part, I did my homework to research some BC juggling tombs, and I was able to find some interesting things that I will share with you below.

In many articles on juggling history, the images on the tombs of Beni Hasan are discussed, saying that it was an Egyptian prince who marked his tomb with depictions of juggling. Beni Hasan is not actually a prince; it is the name of a town in Middle Egypt on the eastern bank of the Nile River where a necropolis is found, and there lie the remains of governors, monarchs and pharaohs.

From Wikipedia, the free encyclopedia

For other uses, see Circassian (disambiguation).

Circassians, also called **Cherkess** or **Adyghe** (Adyghe and Kabardian: Адыгэхэр, romanized: *Adygekher*) are an indigenous Northwest Caucasian ethnic group and a nation; native to the historical country-region of Circassia in the North Caucasus.[29] As a consequence of the Circassian genocide perpetrated by the Russian Empire in the 19th century during the Russo-Circassian War, most Circassians were exiled from their homeland in Circassia to modern-day Turkey and the rest of the Middle East, where most of them are today.[30] In the early 1990s, the Unrepresented Nations and Peoples Organization estimated that there are as many as 3.7 million Circassians in diaspora in over 56 countries.[31]

The Circassian language is the ancestral language of the Circassian people,[32] and Islam has been the dominant religion among them since the 17th century.[33] Circassia has been repeatedly invaded since ancient times; its isolated terrain coupled with the strategic value external societies have placed on the region have greatly shaped the Circassian national identity.[34]

The Circassian flag consists of a green field charged with 12 gold stars and, in the center, three crossed arrows. The stars represent the 12 historical Circassian provinces: the Abzakh, the Besleney, the Bzhedugh, the Hatuqway, the Kabardians, the Mamkhegh, the Natukhaj, the Shapsugh, the Chemirgoy, the

Page, Brin, and **Scott Hassan**—the rarely acknowledged "third founder" of Google—were building a machine that converts the time we spend exploring the Internet into money as a means to an end. Money was just the first step in the grand plan. Hassan, who bailed out of Google early, is still trying to cure death and colonize the solar system. Page and Brin stayed on, and changed as Google did—monetized, and thoroughly civilized. "It's really depressing," said one early employee.

itself. This great Muslim physicist also discovered the camera obscura phenomenon, which explains how the eye sees images upright due to the connection between the optic nerve and the brain.

7. Music

Muslim musicians have had a profound impact on Europe, dating back to Charlemagne tried to compete with the music of Baghdad and Cordoba, according to Hassani. Among many instruments that arrived in Europe through the Middle East are the lute and the rahab, an ancestor of the violin. Modern musical scales are also said to derive from the Arabic alphabet.

8. Toothbrush

According to Hassani, the Prophet Mohammed popularized the use of the first toothbrush in around 600. Using a twig from the Meswak tree, he cleaned his teeth and freshened his breath. Substances similar to Meswak are used in modern toothpaste.

9. The crank

Many of the basics of modern automatics were first put to use in the Muslim world, including the revolutionary crank-connecting rod system. By converting rotary motion to linear motion, the crank enables the lifting of heavy objects with relative ease. This technology, discovered by Al-Jazari in the 12th century, exploded across the globe, leading to everything from the bicycle to the internal combustion engine.

10. Hospitals

"Hospitals as we know them today, with wards and teaching centers, come from 9th century Egypt," explained Hassani. The first such medical center was the Ahmad ibn Tulun Hospital, founded in 872 in Cairo. Tulun hospital provided free care for anyone who needed it – a policy based on the Muslim tradition of caring for all who are sick. From Cairo, such hospitals spread around the Muslim world.

CNN World Watch Listen Live TV Sign in

3. Flying machine

"Abbas ibn Firnas was the first person to make a real attempt to construct a flying machine and fly," said Hassani. In the 9th century he designed a winged apparatus, roughly resembling a bird costume. In his most famous trial near Cordoba in Spain, Firnas flew upward for a few moments, before falling to the ground and partially breaking his back. His designs would undoubtedly have been an inspiration for famed Italian artist and inventor Leonardo da Vinci's hundreds of years later, said Hassani.

4. University

In 859 a young princess named Fatima al-Firhi founded the first degree-granting university in Fez, Morocco. Her sister Miriam founded an adjacent mosque and together the complex became the al-Qarawiyyin Mosque and University. Still operating almost 1,200 years later, Hassani says he hopes the center will remind people that learning is at the core of the Islamic tradition and that the story of the al-Firhi sisters will inspire young Muslim women around the world today.

5. Algebra

The word algebra comes from the title of a Persian mathematician's famous 9th century treatise "Kitab al-Jabr Wa l-Mugabala" which translates roughly as

Modern surgery has benefited from Muslim surgeon Al Zahwari's inventions. Around the year 1,000, he reportedly performed the first caesarean operation and created the first pair of forceps. Philippe Huguen/AFP/Getty Images

Editor's Note: This story was originally published on January 29, 2010.

London (CNN) — Think of the origins of that staple of modern life, the cup of coffee, and Italy often springs to mind.

But in fact, Yemen is where the ubiquitous brew has its true origins.

Along with the first university, and even the toothbrush, it is among surprising Muslim inventions that have shaped the world we live in today.

The origins of these fundamental ideas and objects – the basis of everything from the bicycle to musical scales – are the focus of "1001 Inventions," a book celebrating "the forgotten" history of 1,000 years of Muslim heritage.

"There's a hole in our knowledge, we leap frog from the Renaissance to the Greeks," professor Salim al-Hassani, Chairman of the Foundation for Science, Technology and Civilisation, and editor of the book told CNN.

"1001 Inventions" is now an exhibition at London's Science Museum. Hassani hopes the exhibition will highlight the contributions of non-Western cultures – like the Muslim empire that once covered Spain and Portugal, Southern Italy and stretched as far as parts of China – to present day civilization.

Here Hassani shares his top 10 outstanding Muslim inventions:

1. Surgery

Around the year 1,000, the celebrated doctor Al Zahrawi published a 1,500 page illustrated encyclopedia of surgery that was used in Europe as a medical reference for the next 500 years. Among his many inventions, Zahrawi discovered the use of dissolving cat gut to stitch wounds – beforehand a second surgery had to be performed to remove sutures. He also reportedly performed the first caesarean operation and created the first pair of forceps.

America's First Jet Ace Displayed His Flying Skills in Three Wars

James Jabara stands on a F-86 Sabre in an Air Force photo from April 1953. (U.S. Air Force photo)

As a high school student, James Jabara's eyesight was so weak that he had to wear glasses. For most students, this might not rankle beyond the occasional taunt of "four eyes," but young Jabara wanted more than anything to be a pilot. To improve his eyes, he ate 20 carrots a day for "a considerable time," according to Prof. Craig Miner of Wichita State University. This literally homegrown remedy must have succeeded, because today we remember Col. James Jabara as the world's first jet-vs.-jet ace.

Jabara flew more than 100 European missions during World War II, all before he was 20. His courage was legendary, even then. Miner recounts the day when Jabara attacked a German plane, and the two craft collided in the air. The pilots floated to the ground and shook hands in recognition of each other's bravery.

"Jabby" redirects here. For another person nicknamed "Jabby", see Gérard Crombac.

James "Jabby" Jabara (10 October 1923 – 17 November 1966) was the first American and United States Air Force jet ace.[1][2] Born in Oklahoma, he lived in Kansas where he enlisted as an aviation cadet at Fort Riley after graduating from high school. Jabara attended four flying schools in Texas before he received his pilot's wings and was commissioned as a second lieutenant. Jabara flew two tours of combat duty in Europe during World War II as a North American P-51 Mustang pilot, and scored 1.5 air victories against German aircraft.

Jabara flew his first jet aircraft in 1948, the USAF Lockheed F-80 Shooting Star before transitioning to the USAF North American F-86 Sabre. Jabara used this aircraft to shoot down multiple Soviet-built MiG-15 jets during the Korean War. He achieved his first confirmed air victory of the war on 3 April 1951. A month later he was credited with his fifth and sixth victories, making him the first American jet ace in history. He eventually scored 15 victories, giving him the title of "triple ace". Jabara was ranked as the second-highest-scoring U.S. ace of the Korean War. He received the Distinguished Service Cross, Silver Star, Distinguished Flying Cross, Air Medal, and the British Distinguished Flying Cross for his accomplishments in combat.

Jabara next held a series of commands at various Air Force bases across the United States. He flew the Lockheed F-104 Starfighter and later the Convair B-58 Hustler. In 1966, while on leave from service in Vietnam, Colonel Jabara was traveling with his family in two cars to their new home when his daughter crashed the car she was driving and he was riding in, killing them both. They were buried together at Arlington National Cemetery. In recognition of his contributions to military aviation, an airport outside of Wichita, Kansas was named in his honor. Each year the United States Air Force Academy alumni association bestows the Jabara Award upon an Academy graduate whose aerospace accomplishments demonstrate superior performance.

Rana el Kaliouby: The Mother of Emotion Recognition Tech

Read more about Dr. Rana el Kaliouby, the mother of emotion recognition technology and a pioneer in Emotion AI, the next frontier of artificial intelligence.

- Birthplace: Cairo, Egypt
- Industry: Tech
- Success: CEO and Co-Founder of Affectiva
- Recognition: Forbes America's Top 50 Women In

From Cairo to Cambridge: One scientist's quest to humanise AI

by Lisa Ardill 22 MAY 2020 SAVE ARTICLE

Scientist, entrepreneur and author Rana el Kaliouby discusses her journey from Egypt to working on emotion AI at the MIT Media Lab.

Rana el Kaliouby is co-founder and CEO of Affectiva, a Boston-based emotion-recognition tech firm that grew out of MIT's Media Lab.

Bringing emotional intelligence to technology with Rana el Kaliouby

Can machines finally understand what humans are feeling? Artificial intelligence pioneer Rana el Kaliouby discusses the science behind Emotion AI

Hacker Breaks Down 26 Hacking Scenes From Movies & TV

THE RECENT SUCCESS IN the accurate analysis of facial expressions and measurement in emotion and engagement has paved a new direction of how we use artificial intelligence to improve the way we live and interact with each other. This shift from identification technology, such as facial recognition, to human perception AI – technology that can understand human sentiment – is the driving force behind Rana el Kaliouby's work.

Inspired by her own experience with years of long-distance communication virtually and digitally, el Kaliouby and her team at Affectiva are developing technology that can comprehend human engagement. This shift comes at an important time – political polarisation suggests that empathy is diminishing and the current COVID-19 pandemic has heightened the need for emotional context, as hundreds of millions of people find themselves physically isolated from others.

New Salesforce Research

"Technology has a lot of cognitive intelligence, but no emotional intelligence – which is a problem for not only how we interface with technologies but, more importantly how we connect and communicate with one another."

In this punchy virtual briefing hosted by Greg Williams, Editor of WIRED with Rana el Kaliouby, co-founder and

Research: Arab Inventors Make the U.S. More Innovative

by Sami Mahroum, Georg Zahradnik, and Bernhard Dachs

From Hassan Kamel Al-Sabbah, a Lebanese-born American serial inventor, to Ahmed Zewail, the 1999 Nobel laureate in chemistry, to Farouk El-Baz, a NASA and MIT scientist who helped plan the Apollo landing, to Elias A. Zerhouni, the 16th director of the National Institutes of Health, Arab immigrants have made major contributions to American science and technology.

As the Trump administration attempts to limit immigration from several Arab states, these contributions deserve extra attention. The problem is that to date there has been little work to document the extent of Arab contributions to American innovation. We recently set out to remedy that, and our analysis suggests that Arab inventors play a major role in U.S. innovation. They also contribute significantly to the success of major U.S. tech companies.

To shed more light on Arab contributions to the U.S. innovation system, we ran an exercise matching Arabic first names with international patent applications filed under the Patent Cooperation Treaty (PCT). This data includes patents by people residing in the U.S. and around the world. Our approach has been used before, in a study of ethnic innovation in the U.S. as well as in a study of female inventors.

There are obvious shortcomings to this approach. For instance, many non-Arab Muslims have Arabic first names, such as Mohammad, Ali, or Omar, while some Arabs have non-Arabic names. We tried to minimize

6 Groundbreaking Innovations by Arab Americans

Americans born in or with ancestral ties to Arab-speaking countries have made countless significant scientific, medical and engineering contributions.

BY: ELIZABETH YUKO
UPDATED: MARCH 26, 2024 | ORIGINAL: MARCH 31, 2022

While Americans born in or with ancestral ties to Arab countries have made countless significant scientific, medical and engineering contributions, most have never made it into record books. From cryptography, to the artificial heart, to the iPod, here are a few examples of some of the major advancements by Arab Americans.

1. Television Transmission and LCD Screens

Born in Nabatieh, Lebanon in 1899, Hassan Kamel Al-Sabbah studied and then taught mathematics at the American University of Beirut before immigrating to the United States in 1921. After a brief stint studying at the Massachusetts Institute of Technology (MIT), Al-Sabbah earned a master's degree in engineering sciences from the University of Illinois, says Lujine Nasralla, communications specialist at the Arab American National Museum in Dearborn, Michigan.

"In 1923, General Electric (GE) hired him to work in its Engineering Laboratory under a contract that awarded him a dollar for each of his patents," Nasralla explains, noting that between 1927 and 1935, he applied for patents for 52 of his inventions while working at GE. Some of the patents Al-Sabbah was awarded during his time at GE include three for innovations in television transmission technology (granted between 1928 and 1930), and two for cathode ray tubes (1935).

Though Al-Sabbah died in a car accident 1935, GE engineers continued to rely on the technology he invented, including developing the liquid crystal display (LCD) based on one of his patents. Al-Sabbah made numerous other significant contributions to science, technology and engineering, especially in the field of solar energy.

2. The Waffle Cone
